**Wood-Polymer Composites** K O Niska, M. Sain, 2008-05-29 Wood-polymer composites (WPC) are materials in which wood is impregnated with monomers that are then polymerised in the wood to tailor the material for special applications. The resulting properties of these materials, from lightness and enhanced mechanical properties to greater sustainability, has meant a growing number of applications in such areas as building, construction and automotive engineering. This important book reviews the manufacture of wood-polymer composites, how their properties can be assessed and improved and their range of uses. After an introductory chapter, the book reviews key aspects of manufacture, including raw materials, manufacturing technologies and interactions between wood and synthetic polymers. Building on this foundation, the following group of chapters discusses mechanical and other properties such as durability, creep behaviour and processing performance. The book concludes by looking at orientated wood-polymer composites, wood-polymer composite foams, at ways of assessing performance and at the range of current and future applications. With its distinguished editors and international team of contributors, Wood-polymer composites is a valuable reference for all those using and studying these important materials. - Provides a comprehensive survey of major new developments in wood-polymer composites - Reviews the key aspects of manufacture, including raw materials and manufacturing technologies - Discusses properties such as durability, creep behaviour and processing performance

**International Merchandise Trade Statistics** United Nations. Statistical Division, 2011 This edition provides a comprehensive methodological framework for collection and compilation of international merchandise trade statistics in all countries, irrespective of the level of development of their statistical system. The conceptual framework reflects both the multipurpose nature of these statistics and concern for availability of the adequate data sources and data compilation procedures. It is intended primarily for the producers of international trade statistics, particularly the staff of national statistical offices and/or customs involved in the collection and compilation of merchandise trade statistics, but may be also useful to researchers and other users interested in better understanding the nature of trade statistics.

**Nanofinishing Science and Technology** Vijay Kumar Jain, 2016-12-12 Finishing is the final operation after a part is sized and shaped. Currently in high tech industries, there is a demand for nano level surface finishing of components. This

process is done to improve the surface finish, to remove the recast layer, or to remove surface and sub-surface defects. The result is low friction, longer product life, and low power requirements. Equally important is the aesthetic aspect of the product. This subject is growing very fast from the technology as well as a science point of view. Books on this subject are very limited, particularly those ones that deal with both the science as well as the technology aspects.

**Direct Gear Design** Alexander L. Kapelevich,2013-03-22 Over the last several decades, gearing development has focused on improvements in materials, manufacturing technology and tooling, thermal treatment, and coatings and lubricants. In contrast, gear design methods have remained frozen in time, as the vast majority of gears are designed with standard tooth proportions. This over-standardization significantly limits the potential performance of custom gear drives, especially in demanding aerospace or automotive applications. Direct Gear Design introduces an alternate gear design approach to maximize gear drive performance in custom gear applications. Developed by the author, the Direct Gear Design® method has been successfully implemented in a wide variety of custom gear transmissions over the past 30 years. The results are maximized gear drive performance, increased transmission load capacity and efficiency, and reduced size and weight. This book explains the method clearly, making it easy to apply to actual gear design. Describes the origin and theoretical foundations of the Direct Gear Design approach as well as some of its applications—and its limits Details the optimization techniques and the specifics of Direct Gear Design Discusses how this approach can be used with asymmetric gears to further improve performance Describes tolerance selection, manufacturing technologies, and measurement methods of custom gears Compares Direct Gear Design with traditional gear design from both an analytical and an experimental perspective Illustrates the applicability and benefits of this gear design approach with implementation examples Written by an engineer for engineers, this book presents a unique alternative to traditional gear design. It inspires readers to explore ways of improving gear transmission performance in custom gear applications, from higher transmission load capacity, efficiency, and reliability to lower size, weight, and cost.

*Laser in Manufacturing* J. Paulo Davim, 2013-03-04 Generally a laser (light amplification by stimulated emission of radiation) is defined as “a device which uses a quantum mechanical effect, stimulated emission, to generate a coherent beam of light from a lasing medium of controlled purity, size, and shape”. Laser material processing represents a great number of methods, which are rapidly growing in current and different industrial applications as new alternatives to traditional manufacturing processes. Nowadays, the use of lasers in manufacturing is an emerging area with a wide variety of applications, for example, in electronics, molds and dies, and biomedical applications. The purpose of this book is to present a collection of examples illustrating the state of the art and research developments to lasers in manufacturing, covering laser

rapid manufacturing, lasers in metal forming applications, laser forming of metal foams, mathematical modeling of laser drilling, thermal stress analysis, modeling and simulation of laser welding, and the use of lasers in surface engineering. This book can be used as a research book for a final undergraduate engineering course or as a subject on lasers in manufacturing at the postgraduate level. Also, this book can serve as a useful reference for academics, laser researchers, mechanical, manufacturing, materials or physics engineers, or professionals in any related modern manufacturing technology. Contents 1. Laser Rapid Manufacturing: Technology, Applications, Modeling and Future Prospects, Christ P. Paul, Pankaj Bhargava, Atul Kumar, Ayukt K. Pathak and Lalit M. Kukreja. 2. Lasers in Metal Forming Applications, Stephen A. Akinlabi, Mukul Shukla, Esther T. Akinlabi and Tshilidzi Marwala. 3. Laser Forming of Metal Foams, Fabrizio Quadrini, Denise Bellisario, Erica A. **Smart Digital Manufacturing** Rene Wolf, Raffaello Lepratti, 2020-10-02 The world progresses toward Industry 4.0, and manufacturers are challenged to successfully navigate this unique digital journey. To some, digitalization is a golden opportunity; to others, it is a necessary evil. But to optimist and pessimist alike, there is a widespread puzzlement over the practical details of digitalization. To many manufacturers, digital transformation is a vague and confusing concept they nevertheless must grapple with in order to survive the Fourth Industrial Revolution. The proliferation of digital manufacturing technologies adds to the confusion, leaving many manufacturers perplexed and unprepared, with little real insight into how emerging technologies can help them sustain a competitive edge in their markets. This book effectively conveys Siemens's knowledge and experience through a concept called Smart Digital Manufacturing, a stepwise approach to realizing the promise of the Fourth Industrial Revolution. The Smart Digital Manufacturing roadmap provides guidance and enables low-risk, high-reward adoption of new manufacturing software technologies through a series of tipping-point investment decisions that result in optimized manufacturing performance. The book provides readers with a clear understanding of what digital technology has to offer them, and how and when to invest in these essential components of tomorrow's factories. René Wolf is Senior Vice President of Manufacturing Operations Management Software for Siemens Digital Industries Software, a business unit of the Siemens Digital Factory Division. Raffaello Lepratti is Vice President of Business Development and Marketing for Siemens Digital Industries Software.

Creating and Digitizing Language Corpora J. Beal, K. Corrigan, H. Moisl, 2007-07-12 A range of electronic corpora has become accessible via the WWW and CD-ROM. This coincides with improvements in standards governing the collecting,

encoding and archiving of such data. This book develops similar standards for enriching and preserving 'unconventional' data': the fragmentary texts and voices left to us as accidents of history.

*Game Theory And Mechanism Design* Y Narahari,2014-03-13 This book offers a self-sufficient treatment of a key tool, game theory and mechanism design, to model, analyze, and solve centralized as well as decentralized design problems involving multiple autonomous agents that interact strategically in a rational and intelligent way. The contents of the book provide a sound foundation of game theory and mechanism design theory which clearly represent the "science" behind traditional as well as emerging economic applications for the society. The importance of the discipline of game theory has been recognized through numerous Nobel prizes in economic sciences being awarded to game theorists, including the 2005, 2007, and 2012 prizes. The book distills the marvelous contributions of these and other celebrated game theorists and presents it in a way that can be easily understood even by senior undergraduate students. A unique feature of the book is its detailed coverage of mechanism design which is the art of designing a game among strategic agents so that a social goal is realized in an equilibrium of the induced game. Another feature is a large number of illustrative examples that are representative of both classical and modern applications of game theory and mechanism design. The book also includes informative biographical sketches of game theory legends, and is specially customized to a general engineering audience. After a thorough reading of this book, readers would be able to apply game theory and mechanism design in a principled and mature way to solve relevant problems in computer science (esp, artificial intelligence/machine learning), computer engineering, operations research, industrial engineering and microeconomics.

**Environmental Management Accounting Procedures and Principles**, 2001 The Expert Working Group on Improving Government's Role in the Promotion of Environmental Management Accounting (EMA), was formed when it was realised that although a number of governments were interested in promoting EMA, there was little communication between the agencies involved. This, the first publication of the Working Group, presents the terminology and techniques used by its members. It aims to establish a common understanding of the basic concepts of EMA and provide a set of principles and procedures to guide those interested in its application.

This volume provides industry professionals, researchers and students with the most updated review on modern building ideas, and renewable energy technologies that can be coupled with them. It is especially valuable for those starting on a new topic of research or coming into the field.

**Emerging-market Multinational Enterprises in East Central Europe** Ágnes Szunomár, 2021-12-08 The rise of multinational enterprises (MNEs) from emerging markets is topical, important and poses a number of questions and challenges that require considerable attention in the future from academia as well as business management. The recent takeovers of high-profile companies in developed or developing countries by non-European emerging-market MNEs (EMNEs) – such as Lenovo, Wanhua (China), Hindalco (India), CVRD (Brazil), Cemex (Mexico), Lukoil (Russia), etc. – as well as the greenfield or brownfield investments of emerging companies (such as Huawei, ZTE, Tata, Pepco, etc.) show a new trend where new kind of firms become major players globally. EMNEs have become important players in several regions around the globe, ranging from the least developed countries of Africa through the developing markets in Latin America and Asia to the developed countries of the United States or the European Union, including East Central European (ECE) countries. EMNEs presence on the global level has resulted in numerous studies in the international literature but those research results barely cover EMNEs' activities in the ECE region (in the East Central European EU member countries, including the Czech Republic, Hungary, Poland, Slovakia and Slovenia). The existing books typically focus on the investment activity of a single country or region (such as China or East Asia) but a comprehensive analysis is still missing in this regard. The novelty of this edited volume is that it aims at exploring EMNEs location determinants, strategies, activities and challenges in East Central Europe by discussing its anomalies to the traditional theories as well as to other types of MNEs in the ECE region. The authors focus on EMNEs not only from China but from other important emerging countries, too, such as Russia, India, South Korea, Taiwan, Turkey, Brazil or South Africa.
