Summary - Including Appellate Rulings Bloomsbury Publishing

The book is about a village boy, who got rearing under the patronage of God-fearing mother and disciplinarian father, who was running a grocery shop in the nearby town.

Struggling with the least facilities in the village and later in the nearby town, the boy could become lecturer in a degree college. Though he lost his job, the young boy was

determined not to give up and succeeded in getting job in NCERT- The National level body. The book has many

interesting innovations in education that are discussed including a chapter on the infamous Bhopal Gas tragedy of

1984. Later, the young teacher got an invitation from Manchester University for joining the course on EPPAM, thus

initiating exposure to culture and functioning of a developed country. Thus adding anecdotes from U.K. Paris, New York,

Sydney, Gold Coast, Auckland, and San Francisco, the autobiography also explores the Covid- 19 pandemic, and proposes meditation as conceived during Kriya Yoga.

Nothing can go faster than the speed of light. But it seems the superfast, snazzy, chic, and hi-tech vehicles will soon outshine this adage. Fast, faster, fastest technological

advancements in transportation have made mobility of people and goods easy, connecting the entire world and expanding

world trade. It has steered globalization giving a boost to the wealth of nations. On the flipside, aircraft, ships, trucks, and

trains powered by the combustion of fossil fuels, moving across the sky, oceans, and land have accelerated climate

change, besides giving way to the problem of global energy crisis due to the huge demand and short supply of fossil fuels.

So the world now aims at combining energy-efficient technologies with clean fuels to enjoy the benefits of vehicles

while being sensitive to the environment. Hybrids, electric cars, and biofuels are some of the examples in this regard.

However, there is still a long way to go.

This book is intended to serve as a compendium on the state-of-the-art research in the field of locomotives and rail road transport. The book includes chapters on different aspects of the subject from renowned international experts in the field. The book looks closely at diesel engine locomotives and examines performance, emissions, and environmental impact. The core topics have been categorised into four groups: general topics, efficiency improvement and noise reduction, alternate fuels for locomotive traction, and locomotive emission reduction and measurement. The book offers an excellent, cutting-edge resource for researchers working in this area. The book will also be of use to professionals and policymakers interested in locomotive engine technologies and emission standards.
