Disease Control Priorities, Third Edition (Volume 6) King K. Holmes, Stefano Bertozzi, Barry R. Bloom, Prabhat Jha, 2017-11-06 Infectious diseases are the leading cause of death globally, particularly among children and young adults. The spread of new pathogens and the threat of antimicrobial resistance pose particular challenges in combating these diseases. Major Infectious Diseases identifies feasible, cost-effective packages of interventions and strategies across delivery platforms to prevent and treat HIV/AIDS, other sexually transmitted infections, tuberculosis, malaria, adult febrile illness, viral hepatitis, and neglected tropical diseases. The volume emphasizes the need to effectively address emerging antimicrobial resistance, strengthen health systems, and increase access to care. The attainable goals are to reduce incidence, develop innovative approaches, and optimize existing tools in resource-constrained settings.

Mohs Micrographic Surgery Stephen N. Snow, George R. Mikhail, 2004 Mohs Micrographic Surgery, an advanced treatment procedure for skin cancer, offers the highest potential for recovery--even if the skin cancer has been previously treated. This procedure is a state-of-the-art treatment in which the physician serves as surgeon, pathologist, and reconstructive surgeon. It relies on the accuracy of a microscope to trace and ensure removal of skin cancer down to its roots. This procedure allows dermatologists trained in Mohs Surgery to see beyond the visible disease and to precisely identify and remove the entire tumor, leaving healthy tissue unharmed. This procedure is most often used in treating two of the most common forms of skin cancer: basal cell carcinoma and squamous cell carcinoma. The cure rate for Mohs

Micrographic Surgery is the highest of all treatments for skin cancer--up to 99 percent even if other forms of treatment have failed. This procedure, the most exact and precise method of tumor removal, minimizes the chance of regrowth and lessens the potential for scarring or disfigurement

Architectural Factors for Infection and Disease Control AnnaMarie Bliss,Dak Kopec,2022-09-05 This edited collection explores disease transmission and the ways that the designed environment has promoted or limited its spread. It discusses the many design factors that can be used for infection and disease control through lenses of history, public health, building technology, design, and education. This book calls on designers to consider the role of the built environment as the primary source of bacterial, viral, and fungal transfers through fomites, ventilation systems, and overcrowding and spatial organization. Through 19 original contributions, it provides an array of perspectives to understand how the designed environment may offer a reprieve from disease. The authors build a historical foundation of infection and disease, using examples ranging from lazarettos to leprosy centers to show how the ability to control infection and disease has long been a concern for humanity. The book goes on to discuss disease propagation, putting forth a variety of ideas to control the transmission of pathogens, including environmental design strategies, pedestrian dynamics, and open space. Its final chapters serve as a prospective way forward, focusing on COVID-19 and the built environment in a post-pandemic world. Written for students and academics of architecture, design, and urban planning, this book ignites creative action on the ways to design our built environment differently and more holistically. Please note that research on COVID-19 has exponentially grown since this volume was written in October 2020. References cited reflect the evolving nature of research studies at that time.
