Interior architecture and interior design are disciplines that span a complexity of ideas, ranging from human behaviour and anthropology to history and the technology of the future. Approaches to designing the interior are in a constant state of flux, reflecting and adapting to the changing systems of history, culture and politics. It is this process that allows interior design to be used as evidence for identifying patterns of consumption, gender, identity and social issues. The Handbook of Interior Architecture and Design provides a pioneering overview of the ideas and arrangements within the two disciplines that make them such important platforms from which to study the way humans interact with the space around them. Covering a wide range of thought and research, the book enables the reader to investigate fully the changing face of interior architecture and interior design, while offering questions about their future trajectory.

Along with plan and elevation, section is one of the essential representational techniques of architectural design; among architects and educators, debates about a project's section are common and often intense. Until now, however, there has been no framework to describe or evaluate it. Manual of Section fills this void. Paul Lewis, Marc Tsurumaki, and David J. Lewis have developed seven categories of section, revealed in structures ranging from simple one-story buildings to complex structures featuring stacked forms, fantastical shapes, internal holes, inclines, sheared planes, nested forms, or combinations thereof. To illustrate these categories, the authors construct sixty-three intricately detailed cross-section perspective drawings of built projects—many of the most significant structures in international architecture from the last one hundred years—based on extensive archival research. Manual of Section also includes smart and accessible essays on the history and uses of section.

*Interior Design Reference Manual* By David Kent Ballast

Traditional beliefs about meeting goals are fundamentally flawed. Goal setting tactics assume goals are measurable, achieved, and final-all attributes that describe objectives, not goals. Unlike objectives, which are by their very nature self-contained, goals are immeasurable. A goal is realized, not achieved, and must be maintained to remain successful. What good is the goal of losing weight if you don't keep the weight off? Losing twenty pounds is an objective. Keeping that twenty pounds from returning is a goal, which must be maintained to remain a success. In *Three Your Life*, entrepreneur and accidental expatriate David R. Sanders applies this important distinction between goals and objectives. Beginning with attitude, outlook, and perception, Sanders builds a solid foundation on which to effect major life changes. Learn to differentiate between needs, wants, and desires-and discover how focusing on desires causes everything else to fall into place. To realize desires, Sanders reevaluates conventional thinking on prioritizing tasks, using a three-part daily structure that ensures you're working toward a productive and fulfilling life. A fresh new approach to goal setting, *Three Your Life* offers the opportunity to realize your goals, achieve your objectives, and understand the difference between the two.

This is a memoir presented in an anthological - like format; in other words, a collection of short stories, on the life of the author. It starts when he was growing up in the Philippine countryside of Ilocos Sur province. Just like a normal kid, he played with his friends, did crazy things, went to school and moved to Manila, for his college education. He got married while in fifth year college, but still graduated on time. This book relates his struggles, failures, as well as successes, including his coming to America. Searching for the American Dream was no picnic either, but with perseverance, he achieved some of them in modest ways. Foreigners planning to immigrate to the great ol' USA could get glimpses, on what it takes, to come and live in America.

The portfolio is the single most important document that a student has to demonstrate his or her expertise. *Portfolio Design for Interiors* uses real student examples, backed by industry standards and the expertise of the authors, to prepare aspiring interior design professionals to impress.

This new edition has been completely revised. Every section has been updated, and new chapters have been added on paneling, life cycle costing, data management, and fire performance testing. The book also incorporates the 1989 specification data issued by the Construction Specifications Institute. Used for a required course in the College of Architecture at Arizona State University, this book consists of 18 chapters—well documented with charts, diagrams, and checklists—which are organized into three parts. The first part defines professional and product liability and outlines the latest regulations and standards. Three separate chapters are devoted to fire hazards and their effect on interior finishes, upholstery, and furniture specification. Part 2 discusses interior systems and materials: rugs and carpets, resilient and hard-surface flooring, interior wall finishes, paneling, window systems, and commercial furniture. Life cycle costing is covered, as are the requirements for barrier-free public interiors. Part 3 establishes guidelines for coordinating drawings, schedules, and specification documents. The latest technological developments are referred to throughout the text, and up-to-date terminology is defined in glossaries at the ends of chapters. The book is an invaluable reference for interior designers, architects, and students of these professions. With the emergence of sick building syndrome in the 1970s and the emphasis on LEED standards today, interior designers are interested in the topics of health and sustainability. Health, Sustainability, and the Built Environment examines the concept of sustainability as it pertains to sustaining human health. By analyzing the many ways that humans interact with the built environment, the text teaches students how to identify both the positive and negative effects that their designs can have on the health of the occupants.
