Between 1550 and 1800 the Northern Netherlands went through a period of intense economic development. This did not leave the surrounding regions untouched. This book offers the first systematic analysis of the international impact of Dutch economic development and investigates the economic consequences of Dutch dominance in the areas bordering the North Sea. By using a wide variety of sources and literature Christiaan van Bochove describes the international flows of goods, people and money, focussing attention on the effects on the prices of everyday goods, the wages of labourers and interest

Japan in the postwar period—a success it is crucial for us to understand in a time marked by controversial trade imbalances and concerns over competitive industrial performance. Gerlach focuses on what he calls the intercorporate alliance, the innovative and increasingly pervasive practice of bringing together a cluster of affiliated companies that extends across a broad range of markets. The best known of these alliances are the keiretsu, or enterprise groups, which include both diversified families of firms located around major banks and trading companies and vertical families of suppliers and distributors linked to prominent manufacturers in the automobile, electronics, and other industries. In providing a key link between isolated local firms and extended international markets, the intercorporate alliance has had profound effects on the industrial and social organization of Japanese businesses. Gerlach casts his net widely. He not only provides a rigorous analysis of intercorporate capitalism in Japan, making useful distinctions between Japanese and American practices, but he also develops a broad theoretical context for understanding Japan's business networks. Addressing economists, sociologists, and other social scientists, he argues that the intercorporate alliance is as much a result of overlapping political, economic, and social forces as are such traditional Western economic institutions as the public corporation and the stock market. compellingly, *Alliance Capitalism* raises important questions about the best method of exchange in any economy. It identifies situations where cooperation among companies is an effective way of channeling corporate activities in a world marked by complexity and rapid change, and considers in detail alternatives to hostile takeovers and other characteristic features of American capitalism. The book also points to the broader challenges facing Japan and its trading partners as they seek to coordinate their distinctive forms of economic organization.

This book investigates the politics of transatlantic trade, specifically the Transatlantic Trade and Investment Partnership negotiations. Using a novel approach, the authors analyze the rhetorical choices made by opponents and supporters of an agreement, and the logic behind their arguments. Opponents used emotive frames and strategically chosen issues to increase public opposition to the negotiations; supporters countered, but also accommodated, parts of opponents' rhetoric in hopes of quelling discontent. The study also highlights the resulting changes to EU trade policy, thus contributing to the literatures on trade policy, politicization, and rhetorical analysis.

By analyzing the business practices of the ancient world--phenomena such as resource and market seeking behavior, international trade from China, India and Rome, to Africa and even northern and western parts of Europe, Small and Medium Size Enterprises (SMEs) operating internationally and outsourcing production, multicultural workforces, tariff reduced zones, interregional tax issues, and the management of currency risks--the authors provide readers with a unique historical interpretation of the contemporary globalizing economy and a durable theoretical framework for future historical economic analyses.

Recently, the international division of labour in industrial production has grown increasingly more volatile. and management sciences. The allocation of R&D and production mandates within or between enterprises, the setting up, closing down, purchase or sale of subsidiaries at different localities, the shifting patterns of collaborative innovation, together with newly evolving forms of capitalism, all appear to interact in ways not seen before. It appears we have entered a new era termed 'industrial transition'. This book forms the first approach toward conceptualising the term and compiling illustrative empirical underpinnings. Contributions by an international set of renowned economic geographers highlight the major features and case studies of 'industrial transition' and address various questions that matter for the future of our global economy: How are regions and localities affected by the shift of product mandates? In which ways do changes differ between industrial sectors and economic regions? How can regions and localities adequately prepare for or react to foreseeable changes; and how can regional resilience and response capacities be built and enhanced? This classic text covers all the conventional areas of international economics in an easy-to-understand manner. The 13th edition continues to provide the best blend of events and analysis, so that readers can build their abilities to understand global economic developments and to evaluate proposals for changes in economic policies.
