Ideal for small businesses, as well as any large company bookkeeper, this book covers: \*Structuring your business and choosing an accounting method \*Setting up an accounting system and basic operating procedures (tracking sales, determining costs, managing cash, etc.) \*Creating employee records, maintaining a payroll system, and accounting for benefits \* Keeping tax and benefit records \* Reporting costs \* Closing out cash journals and employee accounts at month end and balancing ledgers \*Preparing month-end and year-end statements and reports \*Producing a balance sheet and monthly profit-and-loss (P&L) statements \*Using accounting software

This textbook, originally by D. Annand and H. Dauderis, was intended for a first course in introductory financial accounting. It focuses on core introductory financial accounting topics that match pre-requisite requirements for students advancing to Intermediate Financial Accounting. A corporate approach is utilized versus beginning with a sole proprietorship emphasis and then converting to a corporate approach; this consistency throughout the book reduces confusion for the introductory student. This most recent revision by D. Marchand converted the text from IFRS to reflect the Generally Accepted Accounting Principles of the United States (U.S. GAAP).

Introduction to the Theory and Context of Accounting is an introductory text on the theory and context of accounting and covers topics ranging from long-term asset valuation and depreciation to the measurement of income, the utility of accounting statements, and the use of accounting in economics and politics. This book is comprised of 12 chapters and begins with a historical overview of accounting, from the introduction of double-entry or Italian method to the publication of the first book on accountancy by the Franciscan monk, Luca Pacioli. The development of accounting during the Industrial Revolution is also considered, along with the emergence of the accounting profession and the earliest professional organizations. The next chapter presents a conceptual framework of accounting, with emphasis on the limits of accountability, measurement assumptions, the construction of financial reports, and the development of accounting theory. Subsequent chapters deal with the use of accounting in economics and politics as well as the utility of accounting statements. This monograph will be a useful resource for teachers and undergraduate students of financial and management accounting.

Financial accounting is generally thought of as a very precise science. This book seeks to dispel this myth. Even absent fraudulent manipulation, information contained in financial statements can be woefully misleading and incomplete. Written primarily for non-accounting students, small business owners, and advisers to small business, the book demonstrates how accounting information contained in financial statements both informs and misinforms statement users.

Written by one of ANZ's premier sustainability and social accounting academics, *An Introduction to Accounting: Accountability in Organisations and Society* brings today's accounting hot topics of corporate accountability,

sustainability and social responsibility to life with the only complete textbook created from the ground up for these modern accounting teaching and learning concepts. An Introduction to Accounting: Accountability in Organisations and Society takes a unique approach in embracing from the start the notion of accountability for the environment and sustainability in accounting; the structure, content and learning activities provide students with an understanding of accounting's pervasive and transformative role as a social practice and organisational driver. It shows that environments, ideas and values change; the interconnectivity of society; that the planet must be respected as a resource; and that people are affected/influenced by the information they receive and the way it is presented. It is emphasised that accounting and accountability are key aspects of every person's life and that the practice of accounting, while often being seen as very technical in nature, has many social implications. Learning accounting through the lens of sustainability and the environment embeds this perspective in students' minds so that in their careers they will actively seek and use accounting information to make decisions that take into consideration accountability for the environment. This textbook integrates financial and managerial accounting as opposed to keeping these areas separate, the approach followed by most books and curriculums. By "integration", we mean the authors focus on the business process and examine the activities from both an external, financial reporting perspective and an internal, management decision-making perspective. The text incorporates real world applications, including actual financial statements, to reinforce the relevance of topics to real business situations and promote student interest. The text also promotes active learning through Pause & Reflect "probing" questions placed sporadically throughout each chapter, Of Interest boxes that provide additional information relating to the chapter concepts, new Fast Fact boxes that provide additional information related to chapter concepts in a short, trivia-like manner, and end-of-chapter group exercises. There are three key distinctions to the Ainsworth/Deines approach. They are: 1. Integration - described in

preceding paragraph.2. Within the context of business processes, Ainsworth/Deines is organized by planning for activities, performing those activities (in other words, capturing them in the financial statements), and finally, evaluating those business activities.3. An organization around the Statement of Cash Flows first focusing on Operating Activities (what is my business, my product, who are my customers?) and then Financing and Investing Activities (how do I fund my business, how do I expand, what are the financial risks, etc?).
