For thirty years, Mark as Story has introduced readers to the rhetorical and narrative skill that makes Mark so arresting and compelling a story. Rhoads, Dewey, and Michie have helped to pioneer our appreciation of the Gospels, and Mark in particular, as narratives originally created in an oral culture for oral performance. New in this edition are a revised introduction and an afterword describing the significant role Mark as Story has played in the development of narrative criticism.

This two-volume set by the father of Polarity Therapy--the healing science based on living energy fields--has been essential reading for many practitioners of the healing arts, especially those who employ manual techniques or energy-balancing procedures. Polarity Therapy can be used in psychotherapy, chiropractic therapy, osteopathy, many types of massage, physical therapy, dance, yoga, and other forms of bodywork.

Offers coverage of each important step in engineering cost control process, from project justification to life-cycle costs. The book describes cost control systems and shows how to apply the principles of value engineering. It explains estimating methodology and the estimation of engineering, engineering equipment, and construction and labour costs

The Word Biblical Commentary delivers the best in biblical scholarship, from the leading scholars of our day who share a commitment to Scripture as divine revelation. This series emphasizes a thorough analysis of textual, linguistic, structural, and theological evidence. The result is judicious and balanced insight into the meanings of the text in the framework of biblical theology. These widely acclaimed commentaries serve as exceptional resources for the professional theologian and instructor, the seminary or university student, the working minister, and everyone concerned with building theological understanding from a solid base of biblical scholarship.

Sisters Of Survival (S.O.S.) is an anti-nuclear performance art group founded in 1981 by Jerri Allyn, Nancy Angelo, Anne Gauldin, Cheri Gaulke and Sue Maberry. Clothing themselves in the colors of the rainbow, their imagery evoked hope, humor and a celebration of diversity. Inspired by anti-nuclear war demonstrations in Europe, S.O.S. created END OF THE RAINBOW, a three-part conceptual art project that generated dialogue between the people of North America and Western Europe about the nuclear threat. Their work included public performance art staged for the media as well as the general public, artists' books, a billboard, slide lectures, networking with artist and activist groups, a radio program and a traveling exhibition. Learn more about this pioneering group whose art and media strategies addressed global issues that remain urgent today. This catalogue is published by Otis College of Art and Design in conjunction with the exhibition "Doin' It in Public: Feminism and Art at the Woman's Building," October 1, 2011 - February 26, 2012, organized by the Ben Maltz Gallery and supported by the Getty initiative "Pacific Standard Time: Art in L.A. 1945-1980." Contributing writers include Linda Frye Burnham, Marlena Doktorczyk-Donohue, and Michelle Moravec.

Presents a varied collection of fourteen stories that range from a writer's attempt to come to terms with his past to the kidnapping of a doctor's estranged wife

Reduced order models, or model reduction, have been used in many technologically advanced areas to ensure the associated complicated mathematical models remain computable. For instance, reduced order models are used to simulate weather forecast models and in the design of very large scale integrated circuits and networked dynamical systems. For linear systems, the model reduction problem has been addressed from several perspectives and a comprehensive theory exists. Although many results and efforts have been made, at present there is no complete theory of model reduction for nonlinear systems or, at least, not as complete as the theory developed for linear systems. This monograph presents, in a uniform and complete fashion, moment matching techniques for nonlinear systems. This includes extensive sections on nonlinear time-delay systems; moment matching from input/output data and the limitations of the characterization of moment based on a signal generator described by differential equations. Each section is enriched with examples and is concluded with extensive bibliographical notes. This monograph provides a comprehensive and accessible introduction into model reduction for researchers and students working on non-linear systems.

First published in 1983, The Ethics of Environmental Concern has become a classic in the relatively new field of environmental ethics. Examining traditional attitudes toward nature, and the degree to which these attitudes enable us to cope with modern ecological problems, Robin Attfield looks particularly at the Judeo-Christian heritage of belief in humankind's dominion, the tradition of stewardship, and the more recent belief in progress to determine the extent to which these attitudes underlie ecological problems and how far they embody resources adequate for combating such problems. He then examines concerns of applied ethics and considers our obligations to future generations, the value of life, and the moral standing and significance of nonhumans. Simultaneously, he offers and defends a theory of moral principles appropriate for dealing with such concerns as pollution, scarce natural resources, population growth, and the conservation and preservation of the environment. The second edition includes a new preface and introduction, as well as a bibliographic essay and an updated list of references incorporating relevant scholarship since the publication of the first edition.

This official history was originally printed in very small numbers in 2002. "Defense's Nuclear Agency, 1947-1997" traces the development of the Armed Forces Special Weapons Project (AFSWP), and its descendant government organizations, from its original founding in 1947 to 1997. After the disestablishment of the Manhattan Engineering District (MED) in 1947, AFSWP was formed to provide military training in nuclear weapons' operations. Over the years, its sequential descendant organizations have been the Defense Atomic Support Agency (DASA) from 1959 to 1971, the Defense Nuclear Agency (DNA) from 1971 to 1996, and the Defense Special Weapons Agency (DSWA) from 1996 to 1998. In 1998, DSWA, the On-Site Inspection Agency, the Defense Technology Security Administration, and selected elements of the Office of Secretary of Defense were combined to form the Defense Threat Reduction Agency (DTRA).

In these nine short stories that Ann Beattie called "a powerful first collection," Lewis brilliantly captures the complexity of African-American family life. With memories as sublime as they are precise, Lewis' characters live in these pages, struggle for meaning, and learn to love each other. The spirits that connect us all are embodied in these wise, confused, passionate people and moments poetic in their shadings.

How do geographers' worldviews interact with the discipline of geography? In Geography and Worldview, the editors begin by mapping two approaches to studying the intersection of science and religious belief: an approach that asks what consequences scientists' basic beliefs have on scientific research, and one that extrapolates implications of their research. Essays using both approaches appear in this volume, creating a well-balanced collection with a variety of perspectives from established scholars in geography.

Preface Also By F. Kenneth Hare, Gilbert F. White, John K. Wright.

Managing Change in Organizations: A Practice Guide is unique in that it integrates two traditionally disparate world views on managing change: organizational development/human resources and portfolio/program/project management. By bringing these together, professionals from both worlds can use project management approaches to effectively create and manage change. This practice guide begins by providing the reader with a framework for creating organizational agility and judging change readiness.

This is the first volume of a new series of research publications in geography which is published for the Department of Geography, University of Toronto. The Hydrologic Cycle and the Wisdom of God traces the development of the idea of the hydrologic cycle in the context of natural theology. The notion that "all creation exhibits the wisdom of the Creator" was once a widely held belief in the Western world. However, unlike stars and biological organisms, the physical features of the earth, with their evident lack of pattern, were difficult to reconcile with God's wisdom until scholars and scientists, at the end of the seventeenth century, found a satisfactory solution in the concept of the hydrologic cycle. The concept served to explain the earth's features so well that in the process it explained away one of them--the great deserts. This work shows the growth and eventual decay of a concept which attempts to relate the broad range of seemingly little-connected phenomena that physical geographers, in their several capacities, are still committed to study. It will be of interest to physical geographers and all scholars who are concerned with historical attitudes towards man's physical environment. Argues that lasting peace is possible in the Middle East if Israel will change its position and agree to offer concessions

In the history of Western thought, men have persistently asked three questions concerning the habitable earth and their relationships to it. From the time of the Greeks to our own, answers to these questions have been and are being given so frequently and so continually that we may restate them in the form of general ideas.

More than a buzzword, agile is a powerful business tool for all. To the uninitiated, agile is a software development and project management process involving white boards, colored Post-it Notes, and stand-up meetings. It may seem as though agile doesn't and won't ever apply to you. But agile is here to stay, and its benefits can be realized beyond IT and project management into other areas of your business. If you're a leader, it's worth exploring how your group can benefit from the higher productivity and morale agile brings. Agile: The Insights You Need from Harvard Business Review brings you today's most essential thinking on agile, from exploring the conditions under which agile is most effective and easiest to implement to reducing new-product development risk to bringing the most valuable products and features to market faster and more predictably. The lessons in this book will help you introduce agile into a broader range of activities and accelerate profitable growth for your company. Business is changing. Will you adapt or be left behind? Get up to speed and deepen your understanding of the topics that are shaping your company's future with the Insights You Need from Harvard Business Review series. Featuring HBR's smartest thinking on fast-moving issues--blockchain, cybersecurity, AI, and more--each book provides the foundational introduction and practical case studies your organization needs to compete today and collects the best research, interviews, and analysis to get it ready for tomorrow. You can't afford to ignore how these issues will transform the landscape of business and society. The Insights You Need series will help you grasp these critical ideas--and prepare you and your company for the future.
