Business ethics originated in the United States as an offshoot of theoretical ethics and as part of a movement in applied ethics that was initiated with medical ethics. Although a few small religious-based colleges and universities offered courses in business ethics just after the Second World War, business ethics as an academic field developed most seriously in many universities in the early 1970s. The field of medical ethics was well-developed by then, and it was a natural step to think about ethical issues in business as well. There was also a public reaction to a number of corporate scandals (e.g., price fixing, the Lockheed Japanese bribery allegations, the Goodyear airbrake scandal, etc. that encouraged universities to begin teaching the subject). Business ethics as an academic field was originally developed by philosophers, most of whom had come out of the analytic or Anglo-American philosophical traditions and who had been trained in classical ethics, on Aristotle, Kant, Mill, Bentham and perhaps Dewey. The resulting field then, has been dominated by this thinking. Although to date there are over 50 textbooks in business ethics, most textbooks in business ethics do not take into account contemporary continental philosophy. Although Marxism is sometimes taught in these courses, other more contemporary continental thinkers who could contribute substantially to the field have been ignored. This phenomenon is iterated in the professional journals and in theoretical books on the topic. A rapid and widespread growth of interest in applied ethics is occurring today not only in the United States, but around the world as well. Academia both reflects this and is a leader in the movement. The field of speech communication shares in this increased sensitivity to ethical concerns. Students and the general public are looking for thoughtful analyses and guidance in all areas of communication. Ethical concerns relative to mass communication have been the subject of a number of books, but only a very few cover the entire scope of communication to include interpersonal, intercultural, organizational, small groups, and public speaking. This book tries to fill that need by discussing ethical concerns as they emerge in the areas of the communication process -- the communicator, the message, the media, the audience, and the situation. The speech communication field now has a need to digest and synthesize the existing research findings and the general literature in the field and in related humanities and social science works into a coherent and nontechnical discussion. This volume explores the most up-to-date materials to provide just such a synthesis. An extensive bibliography at the end of the book gives readers the sources on which the book is based, and offers ample avenues for further personal exploration. The book should provide meaningful food for thought as readers grapple conscientiously with the many everyday decisions made in communication transactions, and in evaluating the communication of others.

While Kierkegaard's philosophy focuses on concrete human existence, his thought has rarely been challenged regarding

concrete and contemporary moral issues. This volume offers an overview of contemporary ethical issues from a Kierkegaardian perspective, deliberately taking him out of the sphere of Theology and Christian Ethics, and examining the ways in which his works can provide fruitful insight into questions which Kierkegaard certainly never himself envisaged, such as accepting refugees into our communities, understanding how we relate to social media, issues of identity with regard to bioengineering or transgender identity, or problems of interreligious dialogue. The contributions in this volume, by international scholars, seek to address both the challenges and insights of Kierkegaard's existential ethics for our contemporary societies, and its relation to topics of current interest in the field of moral philosophy. The volume is organized into three major sections: the first focusing on the relation between ethics and religion, a topic of primary importance with regard to the development of religious foundationalism and the challenges of dealing with diverse belief systems within our communities; the second on our understandings of ourselves and our relations to others with regard to issues of media and community; and the third targeting more specifically questions of identity, and the ways in which the developments of modern science impact identity construction. This work offers new paths for critically engaging with the moral issues of our times from an existential perspective.

The new field of toxicogenomics presents a potentially powerful set of tools to better understand the health effects of exposures to toxicants in the environment. At the request of the National Institute of Environmental Health Sciences, the National Research Council assembled a committee to identify the benefits of toxicogenomics, the challenges to achieving them, and potential approaches to overcoming such challenges. The report concludes that realizing the potential of toxicogenomics to improve public health decisions will require a concerted effort to generate data, make use of existing data, and study data in new ways--an effort requiring funding, interagency coordination, and data management strategies.

Prominent experts from science and the humanities explore issues in robot ethics that range from sex to war. Robots today serve in many roles, from entertainer to educator to executioner. As robotics technology advances, ethical concerns become more pressing: Should robots be programmed to follow a code of ethics, if this is even possible? Are there risks in forming emotional bonds with robots? How might society—and ethics—change with robotics? This volume is the first book to bring together prominent

scholars and experts from both science and the humanities to explore these and other questions in this emerging field. Starting with an overview of the issues and relevant ethical theories, the topics flow naturally from the possibility of programming robot ethics to the ethical use of military robots in war to legal and policy questions, including liability and privacy concerns. The contributors then turn to human-robot emotional relationships, examining the ethical implications of robots as sexual partners, caregivers, and servants. Finally, they explore the possibility that robots, whether biological-computational hybrids or pure machines, should be given rights or moral consideration. Ethics is often slow to catch up with technological developments. This authoritative and accessible volume fills a gap in both scholarly literature and policy discussion, offering an impressive collection of expert analyses of the most crucial topics in this increasingly important field.

Lessons from the personal experience and reflections of a therapist. The difficulty and cost of training psychotherapists properly is well known. It is far easier to provide a series of classes while ignoring the more challenging personal components of training. Despite the fact that the therapist's self-insight, emotional maturity, and calm centeredness are critical for successful psychotherapy, rote knowledge and technical skills are the focus of most training programs. As a result, the therapist's personal growth is either marginalized or ignored. *The Making of a Therapist* counters this trend by offering graduate students and beginning therapists a personal account of this important inner journey. Cozolino provides a unique look inside the mind and heart of an experienced therapist. Readers will find an exciting and privileged window into the experience of the therapist who, like themselves, is just starting out. In addition, *The Making of a Therapist* contains the practical advice, common-sense wisdom, and self-disclosure that practicing professionals have found to be the most helpful during their own training. The first part of the book, 'Getting Through Your First Sessions,' takes readers through the often-perilous days and weeks of conducting initial sessions with real clients. Cozolino addresses such basic concerns as: Do I need to be completely healthy myself before I can help others? What do I do if someone comes to me with an issue or problem I can't handle? What should I do if I have trouble listening to my clients? What if a client scares me? The second section of the book, 'Getting to Know Your Clients,' delves into the routine of therapy and the subsequent stages in which you continue to work with clients and help them. In this context, Cozolino presents the notion of the 'good enough' therapist, one who can surrender to his or her own imperfections while still guiding the therapeutic relationship to a positive outcome. The final section, 'Getting to Know Yourself,' goes to the core of the therapist's relation to him- or herself, addressing such issues as: How to turn your weaknesses into strengths, and how to deal with the complicated issues of pathological caretaking, countertransference, and self-care. Both an excellent introduction to the field as well as a valuable refresher for the experienced clinician, *The Making of a Therapist* offers readers the tools and insight that make the journey of becoming a therapist a rich and rewarding experience.

Business ethics is a form of the art of applied ethics that examines ethical rules and principles within a commercial context, the various moral or ethical problems that can arise in a business setting, and any special duties or obligations that apply to persons who are engaged in commerce. Business ethics can be both a normative and a descriptive discipline. As a corporate practice and a career specialisation, the field is primarily normative. In academia descriptive approaches are also taken. The range and quantity

of business ethical issues reflects the degree to which business is perceived to be at odds with non-economic social values. Historically, interest in business ethics accelerated dramatically during the 1980s and 1990s, both within major corporations and within academia. For example, today most major corporate websites lay emphasis on commitment to promoting non-economic social values under a variety of headings (e.g. ethics codes, social responsibility charters). In some cases, corporations have redefined their core values in the light of business ethical considerations. Catching business ethics in action, however, remains a seldom-spotted nugget for in reality it depends on the characters of the characters.

Philosophy professor Walter G Jeffko explores a series of contemporary ethical problems from a personalistic perspective influenced by the Scottish philosopher John Macmurray (1891-1976). Professor Jeffko utilizes key elements of Macmurray's thought in developing his own viewpoint; and he relates Macmurray's ideas to those of a wide variety of important philosophers, ethicists, and behavioral scientists. In the opening chapter Jeffko develops a personalistic anthropological and ethical theory within a framework that views the person a relational and rational agent, reason as the standard of value, and the principle of community as the supreme ethical standard. In successive chapters, this theory is applied to the issues of suicide, abortion, euthanasia (including assisted suicide), the death penalty, privacy (including private property and capitalism), the moral treatment of animals, and affirmative action. Jeffko connects ethics with logic in a lucid style that blends scholarship with readability. This is a fresh and absorbing examination of the key ethical dilemmas of our time.

Provides an in-depth look at the emerging field of online research and the corresponding ethical dilemmas. Issues covered include: autonomy; justice and benevolence; informed consent; privacy; ownership of data; research with minors; and respect for persons.
