"George Black rediscovers the history and lore of one of the planet's most magnificent landscapes. Read *Empire of Shadows*, and you'll never think of our first—in many ways our greatest—national park in the same way again." —Hampton Sides, author of *Blood and Thunder*

*Empire of Shadows* is the epic story of the conquest of Yellowstone, a landscape uninhabited, inaccessible and shrouded in myth in the aftermath of the Civil War. In a radical reinterpretation of the nineteenth century West, George Black casts Yellowstone's creation as the culmination of three interwoven strands of history - the passion for exploration, the violence of the Indian Wars and the "civilizing" of the

frontier - and charts its course through the lives of those who sought to lay bare its mysteries: Lt. Gustavus Cheyney Doane, a gifted but tormented cavalryman known as "the man who invented Wonderland"; the ambitious former vigilante leader Nathaniel Langford; scientist Ferdinand Hayden, who brought photographer William Henry Jackson and painter Thomas Moran to Yellowstone; and Gen. Phil Sheridan, Civil War hero and architect of the Indian Wars, who finally succeeded in having the new National Park placed under the protection of the US Cavalry. *George Black's Empire of Shadows* is a groundbreaking historical account of the origins of America's majestic national landmark.

The construction of buildings and structures relies on having a thorough understanding of building materials. Without this knowledge it would not be possible to build safe, efficient and long-lasting buildings, structures and dwellings. Building materials in civil engineering provides an overview of the complete range of building materials available to civil engineers and all those involved in the building and construction industries. The book begins with an introductory chapter describing the basic properties of building materials. Further chapters cover the basic properties of building materials, air hardening cement materials, cement, concrete, building mortar, wall and roof materials, construction steel, wood, waterproof materials, building plastics, heat-insulating materials and sound-absorbing materials and finishing materials. Each chapter includes a series of questions, allowing readers to test the knowledge they have gained. A

deliver precisely what they need, when they need it, and how they need it, so your class time is more engaging and effective.

Paul C. H. Lim offers an insightful examination of the polemical debates about the doctrine of the Trinity in seventeenth-century England, showing that this philosophical and theological re-configuration significantly impacted the politics of religion in the early modern period. Through analysis of these heated polemics, Lim shows how Trinitarian God-Talk became untenable in many ecclesiastical and philosophical circles, which led to the emergence of Unitarianism. He also demonstrates that those who continued to embrace Trinitarian doctrine articulated their piety and theological perspectives in an increasingly secularized culture of discourse. Drawing on both unexplored manuscripts and well-known treatises of Continental and English provenance, he unearths the complex layers of the polemic: from biblical exegesis to reception history of patristic authorities, from popular religious radicalism during the Civil War to Puritan spirituality, from Continental Socinians to English anti-trinitarians who avowed their relative independent theological identity, from the notion of the Platonic captivity of primitive Christianity to that of Plato as "Moses Atticus." Among this book's surprising conclusions are the findings that Anti-Trinitarian sentiment arose from a Puritan ambience, in which Biblical literalism overcame rationalistic

applications. This book features clear conceptual descriptions, concise formulations, and emphasizes both theoretical and experimental aspects of nonlinear optics. The readability of this book is particularly enhanced by a series of color photographs showing the spectacular appearances of various nonlinear optical effects. Both authors of this book are outstanding research scientists renowned in their professional areas. Their major research achievements in nonlinear optics include the pioneering studies of two-wave-coupled refractive-index change, Raman-enhanced self-focusing, optical-frequency Pockels effect, stimulated Kerr scattering, optical phase-conjugation via backward stimulated emission, and two-photon-absorption based optical limiting, stabilization and reshaping.
