Learn how to address racial wealth disparity in the United States today From the life, professional experiences, and research of former Harvard Business School professor Steven Rogers, comes his boldly stated, A Letter to My White Friends and Colleagues. This informative epistle investigates the causes of racial wealth disparity in the United States and provides solutions for addressing it. Through extensive data and historical research, anecdotes, teaching, and case studies, it presents practical ways White people can work with and help the Black community. It teaches readers that eliminating the \$153,000 wealth gap between Black and White people is the solution to over 75% of our problems and offers solutions to help improve Black-White racial relations in the United States. In straightforward language, filled with facts, stories, advice, and sometimes even humor, A Letter to My White Friends and Colleagues encourages every White person to share his/her wealth with the Black community—plain and simple. This book recommends that you spend a portion of your annual household budget with Black-owned companies. If more money is spent at Black-owned

businesses, those companies can grow and create more jobs for Black people. Rogers also proposes White people make large savings deposits into Black-owned banks. These are the financial institutions that are the backbone of the Black community that provide loans to the Black community for businesses, education, automobiles, and home mortgages. And finally, he resolutely encourages White people to support government reparations to Black Americans who are descendants of Black men and women, who were enslaved from 1619 to 1865. Those who read the book will: Understand the root causes of racial disparities in America Discover how you can personally contribute to reducing the inequality between Black and White people in the United States today Get concrete recommendations on how to redirect your spending to Black-owned institutions to help decrease the racial wealth gap This groundbreaking book provides financial recommendations that you can put into practice today, using his helpful instructions in most of the chapters, to address the systemic inequality between White and Black Americans. Read A Letter to My White Friends and Colleagues and be part of the path forward.

finance and banking As globalization redefines the field of corporate finance, international and domestic finance have become almost inseparably intertwined. It's increasingly difficult to understand what is happening in capital markets without a firm grasp of currency markets, the investment strategies of sovereign wealth funds, carry trade, and foreign exchange derivatives products.

International Corporate Finance offers thorough coverage of the international monetary climate, including Islamic finance, Asian banking, and cross-border mergers and acquisitions. Additionally, the book offers keen insight on global capital markets, equity markets, and bond markets, as well as foreign exchange risk management and how to forecast exchange rates. Offers a comprehensive discussion of the current state of international corporate finance Provides simple rules and pragmatic answers to key managerial questions and issues Includes case studies and real-world decision-making situations For anyone who wants to understand how finance works in today's hyper-connected global economy, International Corporate Finance is an insightful, practical guide to this complex subject.

The primary objective of perpetual endowment funds and long-lived trust funds is to generate spendable cash. Ideally, these cash disbursements would be stable from one year to the next and would grow to keep pace with inflation. Too-high

disbursements today would lead to too-low disbursements tomorrow, and vice versa. Setting a proper spending rate is difficult. Trustees often set percentage spending rates based on the real returns they expect to earn from their investments and then link those spending rates to their funds' market values. But linking spending to market values causes problems. One problem is that market values of common asset classes, such as stocks and bonds, are volatile. Trustees fight this volatility by averaging market values over time, but averaging does not work very well. Another problem is that trustees who base spending on market values often understandably come to believe that market values themselves determine spending. In other words, if market values increase (or fall) by a significant amount, then trustees feel justified in increasing (or cutting) spending by similar amounts. This belief is misguided. For equities, the predominant asset class in most endowment and trust funds, the source of returns is not market values but, rather, corporate profits. This brief argues that, counter to common practice, trustees should turn their backs on market values and instead focus on the real cash flows that their assets can generate. For bonds, this would mean their real interest rate. For equities, this would mean their underlying profits. This focus on asset cash flows, rather than on asset market values, is a better way to go. This brief offers two spending rules based on cash

flows. One looks at corporate dividends, and the other at corporate profits. Trustees who base spending on market values usually include bonds in their funds to dampen market value swings. A 30% bond allocation is not uncommon. Yet the cash-flow spending rules described here lead to less volatile spending, even when applied to a 100% equity portfolio, than that of a 30% bond/70% equity portfolio whose spending is based on market values. In addition, spending rules based on cash flows free trustees from fretting about market values. Diversification can still be beneficial, but no longer do trustees need to diversify primarily to dampen market downturns. When equity market values decline, as they invariably will from time to time, trustees may be able to say, “We don’t care.” Furthermore, spending rules based on cash flows enable trustees to keep score. Trustees of perpetual endowment funds and of long-lived personal trust funds often feel obligated to be intergenerationally equitable—that is, to treat current and future beneficiaries the same. The near-universal way to evaluate intergenerational equity is to look at market values. Instead, a spending rule based on cash flows works better. Finally, basing spending on cash flows, rather than on market values, encourages trustees to focus on something that is very important but often overlooked: the long-term health of the economies in which their funds are invested. No spending rule is perfect. But many trustees who now

base spending on market values would benefit by focusing on asset cash flows instead.

Awareness has been growing in the United States - and in nations around the world - that the Chinese Communist Party (CCP) has triggered a new era of great-power competition. Yet few discern the pattern in China's inroads within every region of the world, much less the specific form of dominance to which the party aspires. The CCP aims not merely at preeminence within the established world order - an order that is grounded in free and sovereign nation-states, flows from the universal principles on which America was founded, and advances U.S. national interests - but to fundamentally revise world order, placing the People's Republic of China (PRC) at the center and serving Beijing's authoritarian goals and hegemonic ambitions. In the face of the China challenge, the United States must secure freedom. China is a challenge because of its conduct. Modeled on 20th-century Marxist-Leninist dictatorship, the CCP eventually spurred rapid modernization and produced prodigious economic growth - thanks in no small measure to the party's decision in the late 1970s to embrace free-market elements and to the decision by the United States and nations around the world to engage, and welcome commerce with, China. The party today wields its economic power to co-opt and coerce countries around the world; make the societies and politics of foreign nations more accommodating to CCP

specifications; and reshape international organizations in line with China's brand of socialism. At the same time, the CCP is developing a world-class military to rival and eventually surpass the U.S. military. These actions enable the CCP to credibly pursue the quest - proceeding outward through the Indo-Pacific region and encompassing the globe - to achieve "national rejuvenation" culminating in the transformation of the international order. To understand China's peculiar form of authoritarianism and the hegemonic goals to which it gives rise, it is necessary to grasp the intellectual sources from which China's conduct springs: the CCP's Marxist-Leninist beliefs and the party's extreme interpretation of Chinese nationalism.

Financial collapses—whether of the junk bond market, the Internet bubble, or the highly leveraged housing market—are often explained as the inevitable result of market cycles: What goes up must come down. In Liquidated, Karen Ho

punctures the aura of the abstract, all-powerful market to show how financial markets, and particularly booms and busts, are constructed. Through an in-depth investigation into the everyday experiences and ideologies of Wall Street investment bankers, Ho describes how a financially dominant but highly unstable market system is understood, justified, and produced through the restructuring of corporations and the larger economy. Ho, who worked at an investment bank herself, argues that bankers' approaches to financial markets and corporate America are inseparable from the structures and strategies of their workplaces. Her ethnographic analysis of those workplaces is filled with the voices of stressed first-year associates, overworked and alienated analysts, undergraduates eager to be hired, and seasoned managing directors. Recruited from elite universities as "the best and the brightest," investment bankers are socialized into a world of high risk and high reward. They are paid handsomely, with the understanding that they may be let go at any time. Their workplace culture and networks of privilege create the perception that job insecurity builds character, and employee liquidity results in smart, efficient business. Based on this culture of liquidity and compensation practices tied to profligate deal-making, Wall Street investment bankers reshape corporate America in their own image. Their mission is the creation of shareholder value, but Ho demonstrates that their practices and

assumptions often produce crises instead. By connecting the values and actions of investment bankers to the construction of markets and the restructuring of U.S. corporations, *Liquidated* reveals the particular culture of Wall Street often obscured by triumphalist readings of capitalist globalization.

Longlisted for the National Book Award New York Times Bestseller A former Wall Street quant sounds an alarm on the mathematical models that pervade modern life -- and threaten to rip apart our social fabric We live in the age of the algorithm. Increasingly, the decisions that affect our lives--where we go to school, whether we get a car loan, how much we pay for health insurance--are being made not by humans, but by mathematical models. In theory, this should lead to greater fairness: Everyone is judged according to the same rules, and bias is eliminated. But as Cathy O'Neil reveals in this urgent and necessary book, the opposite is true. The models being used today are opaque, unregulated, and uncontestable, even when they're wrong. Most troubling, they reinforce discrimination: If a poor student can't get a loan because a lending model deems him too risky (by virtue of his zip code), he's then cut off from the kind of education that could pull him out of poverty, and a vicious spiral ensues. Models are propping up the lucky and punishing the downtrodden, creating a "toxic cocktail for democracy." Welcome to the dark side of Big Data. Tracing the arc of a person's life, O'Neil exposes the black box models that shape our future, both as individuals and as a society. These "weapons of math destruction" score teachers and students, sort r sum s, grant (or deny) loans, evaluate workers, target voters, set parole, and monitor our health. O'Neil calls on modelers to take more responsibility for their algorithms and on policy makers to regulate their use. But in the end, it's up to us to become more savvy about the models that govern our lives.
