than 800 examples would eventually be built for US service, with a further 500 aircraft sold to seven export customers. Earning its battle spurs in April 1986 flying strike missions against Libya, the Hornet would subsequently participate in Operation Desert Storm and the various 'policing' operations in Iraq and the Balkans that followed. The 'legacy' Hornet is still very much in frontline use with the US Navy and Marine Corps today. Tony Holmes, author of the *F-14 Tomcat Story*, has once again collected the most spectacular images to complement the history of this star of carrier-based naval aviation.

Modern Military Helicopters is an up-to-date handbook based on Jane's unrivalled data-base. Fully illustrated and listing every variant, including the latest Russian designs, it is the definitive pocket guide available today. Includes all variants Full technical data 200 photographs

It has, improbably, been called uncommonly lucid, even riveting by *The New York Times*, and it was a finalist for the 2004 National Book Awards nonfiction honor. It is a literally chilling read, especially in its minute-by-minute description of the events of the morning of 9/11 inside the Twin Towers. It is *The 9/11 Commission Report*, which was, before its publication, perhaps one of the most anticipated government reports of all time, and has been since an unlikely bestseller. The official statement by the National Commission on Terrorist Attacks Upon the

United States-which was instituted in late 2002 and chaired by former New Jersey Governor Thomas Kean-it details what went wrong on that day (such as intelligence failures), what went right (the heroic response of emergency services and self-organizing civilians), and how to avert similar future attacks.Highlighting evidence from the day, from airport surveillance footage of the terrorists to phone calls from the doomed flights, and offering details that have otherwise gone unheard, this is an astonishing firsthand document of contemporary history. While controversial in parts-it has been criticized for failing to include testimony from key individuals, and it completely omits any mention of the mysterious collapse of WTC 7-it is nevertheless an essential record of one of the most transformational events of modern times.

The Chinese People's Liberation Army (PLA) continues to develop rapidly across all aspects, hardware, technology, personnel, and organizational structure, etc. The PLA's aerospace forces are, in many ways, leading that change. These include the PLA Air Force (PLAAF), PLA Naval Aviation, PLA Rocket Force (PLARF), and space and cyber assets affiliated with the PLA Strategic Support Force (PLASSF). This second edition from the China Aerospace Studies Institute (CASI), seeks to provide a brief primer on the trends affecting these forces and provide basic information about their composition and role today. This publication outlines the roles and missions of China's aerospace forces, the PLAAF and its five branches, the PLARF, and the PLASSF. It also identifies trends in PLA aerospace training and operational proficiency for these forces and discusses the near-term outlook. This publication is intended to serve as foundational work, capturing a snapshot of capabilities, and an outline of organizations and key personnel, while identifying trends underway at the time of its writing in early 2019. CASI supports the United States Defense Department and the China research community writ-large by providing high quality, unclassified research on Chinese aerospace developments in the context of U.S. strategic imperatives in the Indo-Pacific region. Primarily focused on China's Military Air, Space, and Missile Forces, CASI capitalizes on publicly available native language resources to gain insights as to how the Chinese speak to and among one another on these topics. With this second edition, CASI continues to describe the fundamentals in the field. Further research projects will expand on the framework laid out in this primer and will both expand and deepen public

knowledge of developments in Chinese aerospace. While primarily focused on developments related to the services and branches of the PLA's aerospace assets and forces, CASI also explores topics and areas related to the support infrastructure, industrial base, and military-civil fusion, that combines together to form the overall China aerospace field. The U.S. military invests heavily in time and resources to train its officers to be leaders in the broadest sense – forming them not only in military art and science (strategy, tactics, command, etc.), but also in humanistic knowledge, character, and values, as well as how to apply this education on a lightning-fast battlefield or within an inertially slow bureaucracy. The military develops its leaders, at the service academies and in ROTC programs, through very specific but

also broad and deep education – a way of thinking that also has wide application in the civilian world, not only in various professional fields that need leaders and thinkers, but also among military history enthusiasts who want to understand how officers have thought across time and among American citizens who want – and, really, need – to understand how our military leaders think, how they advise presidents, how they lead on the battlefield. In a genre-busting book that spans Stackpole's two longstanding military programs – reference and history – Reed Bonadonna describes how officers think, how they ought to think, how they develop their skills, and how they can improve these skills, as well as how average civilians and citizens can learn from the example of military officers and their program of education. Bonadonna draws from military history, from military arts and science, from literature and science and more, to show how officers develop their critical-thinking and problem-solving skills. A military officer is often called upon to be not only fighter and leader, but also negotiator, organizer, planner and preparer, teacher, writer, scientist, and advisor, and needs broad learning. This is a deeply learned and insightful book, one that cites Lincoln, Grant, Patton, Eisenhower, Marshall, and Churchill as easily as Sun Tzu and Clausewitz, not to mention Homer, Plato, Joseph Conrad, Henry James, Wilfred Owen, Robert Graves, George Orwell, Ludwig Wittgenstein, Joseph Heller, Phil Klay, and even Jane Austen. The book is descriptive as well as prescriptive and should find eager readers inside the military (where officers take seriously their professional education and their professional reading lists) as well as outside, where many look to the military, to military reading lists, and to military history, to glean lessons for life and work.

history of jet fighters in action, from the end of World War II to the present. Meticulously detailed, it features 300 photos, line drawings and graphs that reveal how jet fighters and their weapons have developed and improved, utterly changing the face of air combat. It also focuses on the key technological developments of the Cold War, such as the fighters built to intercept nuclear bombers and to dominate European skies in a Third World War. With combat examples from Southeast Asia, the Falklands and the Middle East, Fighter Combat in the Jet Age compares and contrasts the fighter aircraft of different nations and manufacturers. Also included are spreads with sidebars and boxes describing fighter tactics, major air battles, experimental weapons and famous pilots. It's enough to thrill aircraft enthusiasts of all ages. A reproduction of Jane's All the World Aircraft, wartime editions.

The F-117A Stealth Fighter is designed to be undetectable by radar. Developed in great secrecy during the Cold War, it spearheaded the air assault on Iraq in 1991. An insider's account of America's ineffectual approach to some of the hardest defense and intelligence issues in the three decades since the Cold War ended. Insanity can be defined as doing the same thing over and over again but expecting a different result. As a nation, America has cycled through the same defense and intelligence issues since the end of the Cold War. In *Insanity Defense*, Congresswoman Jane Harman chronicles how four administrations have failed to confront some of the toughest national security policy issues and suggests achievable fixes that can move us toward a safer future. The reasons for these inadequacies are varied and complex, in some cases going back generations. American leaders didn't realize soon enough that the institutions and habits formed during the Cold War were no longer effective in an increasingly multi-power world transformed by digital technology and riven by ethno-sectarian conflict. Nations freed from the fear of the Soviets no longer deferred to America as before. Yet the United States settled into a comfortable, at times arrogant, position as the lone superpower. At the same time our governing institutions, which had stayed resilient, however imperfectly, through multiple crises, began their own unraveling. Congresswoman Harman was there—as witness, legislator, exhorter, enabler, dissident and, eventually, outside advisor and

commentator. *Insanity Defense* is an insider's account of decades of American national security—of its failures and omissions—and a roadmap to making significant progress on solving these perennially difficult issues.

A RAND study analyzed Chinese and U.S. military capabilities in two scenarios (Taiwan and the Spratly Islands) from 1996 to 2017, finding that trends in most, but not all, areas run strongly against the United States. While U.S. aggregate power remains greater than China's, distance and geography affect outcomes. China is capable of challenging U.S. military dominance on its immediate periphery—and its reach is likely to grow in the years ahead.
