

Kiya Rise Of A New Dynasty Kiya Trilogy Book 3

A lost city calling. A darkness descending. Can one woman use ancient magic to save the gods? Kyah is one step closer to discovering her true self. When she learns the famed Atlantis is both her mother's home and her prophesied destiny, she's desperate to answer the call of her ancestors. But even she knows that Travelling across the desert of the Egyptian Realm will place everyone's lives in great danger... As lethal darkness spreads, Kyah holds her only weapon close: a mere spark of light from an ancient goddess. With time running out, she must find the mythical city and fulfill her purpose before it's too late. Can Kyah locate Atlantis and unlock her true power, or will a primordial force extinguish all life in existence? Atlantis Bound is the third book in the thrilling Traveller fantasy series. If you like magic and mythology, bold heroes, and swashbuckling action, then you'll love S.E. Wright's high-stakes novel. Buy Atlantis Bound to unlock a lost city's power today!

One Health is an emerging concept that aims to bring together human, animal, and environmental health. Achieving harmonized approaches for disease detection and prevention is difficult because traditional boundaries of medical and veterinary practice must be crossed. In the 19th and early 20th centuries this was not the case—then researchers like Louis Pasteur and Robert Koch and physicians like William Osler and Rudolph Virchow crossed the boundaries between animal and human health. More recently Calvin Schwabe revised the concept of One Medicine. This was critical for the advancement of the field of epidemiology, especially as applied to zoonotic diseases. The future of One Health is at a crossroads with a need to more clearly define its boundaries and demonstrate its benefits. Interestingly the greatest acceptance of One Health is seen in the developing world where it is having significant impacts on control of infectious diseases.

Nefertiti has forced Naomi to flee Amarna with Malachi and the three children. But even under the protection of Naomi's family in Thebes, Nefertiti still hunts her and Tut. Nefertiti sends assassins to kill them, and while Naomi fights to protect the children, Malachi fights to keep her safe. With three children in tow, one of which isn't her own, she is labeled the harlot outcast wife of the pharaoh and is shunned. She isn't safe among her own people, and flees from being stoned to death. Although her family protects her, she must find a way to survive. While Naomi struggles to keep herself and Tut alive, old adversaries return as Smenkhkare takes advantage of Akhenaten's ailing health. Naomi must rely on Horemheb's promise to protect Tut's birthright, but her feelings for Malachi could cause more problems with Horemheb than she expects.

In recent years the bioarchaeology of Southeast Asia and the Pacific islands has seen enormous progress. This new and exciting research is synthesised, contextualised and expanded upon in The Routledge Handbook of Bioarchaeology in Southeast Asia and the Pacific Islands. The volume is divided into two broad sections, one dealing with mainland and island Southeast Asia, and a second section dealing with the Pacific islands. A multi-scalar approach is employed to the bio-social dimensions of Southeast Asia and the Pacific islands with contributions alternating between region and/or site specific scales of operation to the individual or personal scale. The more personal level of osteobiographies enriches the understanding of the lived experience in past communities. Including a number of contributions from sub-disciplinary approaches tangential to bioarchaeology the book provides a broad theoretical and methodological approach. Providing new information on the globally relevant topics of farming, population mobility, subsistence and health, no other volume provides such a range of coverage on these important themes.

This book provides a detailed review of terminations of ice ages, including a very attractive theory based on dust deposits on ice sheets. While other books on ice ages are mostly short, popular, and non-technical, the only book that attempts to deal with the broad issues of what we know about past ice ages and why they occur is the book by Muller and MacDonald (M&M), published by Praxis. However, despite its many good features, this book suffers from an inordinate emphasis on spectral analysis, a lack of coverage of new data, and a very confusing sequence of chapters. As a result, the data and theory are so intimately entwined that it is difficult to separate one from the other. This volume provides an independent and comprehensive summary of the latest data, theories and analysis. This third edition of what has become the premier reference and sourcebook on ice ages addresses recent topics, and includes new references, new data, and a totally new, greatly expanded treatment of terminations of ice ages.

This account of North American vegetation and paleoenvironments over the past 70 million years reveals a history that is vast, immensely complex, and dynamic. Quaternary studies provide the essential context for evaluation of what is happening with the earth's climate today, and to clarify our vulnerability to hazardous natural processes. This book covers scientific aspects of past and present climatic changes of the quaternary period focused on the Indian subcontinent via response of modern environmental conditions on climate proxies, reconstruction of paleoclimate, paleomonsoon, glacial geology, climate variabilities using dendrochronology, cave deposits including quaternary tectonics and climate change over the Himalayan region. It consists of data generated from different landforms including lakes, caves, rivers, swamps, pits, and trenches using different proxies. Aimed at researchers, graduate students, professionals in geology, geography and environmental sciences, micropaleontology, and Quaternary climate change, this book: Studies Quaternary climate using various proxies in varied environments on the Indian sub-continent Covers pertinent historical and environmental archives to understand the current climate scenario Discusses the impact of climate change on biotic and abiotic components Includes thorough review of paleoclimate change studies Devotes significant space to glacial geology and all glacial climate proxies

The stakes couldn't be higher. Faced with the extinction of Egypt's faith, the High Seer must preserve the gods' knowledge for the sake of the pharaoh's immortality.

One vision rocks the foundations of the Egyptian belief system. The pharaoh's seer, Kiya, knows that their civilisation will perish, and their faith fall fallow. Horrified at the implication, she shares the news with the High Priest of Egypt. Only together can they plant a seed that will allow the culture to return and flourish.

Her vision is clear. They must select a group of men who will carry the power of the ancient gods within them. They will form a secret organisation that will cross the plains and oceans to ensure that one day, the pharaohs can rise again and reclaim their rightful place as world leaders.

Nothing must stop them - not even the pharaoh.

The only problem is they have a spy in their midst who's determined to see them fail.

If you like historical thrillers, quirky characters, and tales of mysterious ancient powers, then you'll love this novella.

In this book, Gregory Feist reviews and consolidates the scattered literatures on the psychology of science, then calls for the establishment of the field as a unique discipline. He offers the most comprehensive perspective yet on how science came to be possible in our species and on the important role of psychological forces in an individual's development of scientific interest, talent, and creativity. Without a psychological perspective, Feist argues, we cannot fully understand the development of scientific thinking or scientific genius. The author explores the major subdisciplines within psychology as well as allied areas, including biological neuroscience and developmental, cognitive, personality, and social psychology, to show how each sheds light on how scientific thinking, interest, and talent arise. He assesses which elements of scientific thinking have their origin in evolved mental mechanisms and considers how humans may have developed the highly sophisticated scientific fields we know today. In his fascinating and authoritative book, Feist deals thoughtfully with the mysteries of the human mind and convincingly argues that the creation of the psychology of science as a distinct discipline is essential to deeper understanding of human thought processes.

A collection of papers from the Egyptologists' Electronic Forum (<http://welcome.to/EEF>) on a variety of Egyptological topics, of interest to both professionals and laypersons. Five broad themes may be discerned: royalty in ancient Egypt, scarabs and funerary items, archaeology and early Egypt, Egyptology - past, present and future, and ancient Egyptian language, science and religion

How did humankind deal with the extreme challenges of the last Ice Age? How have the relatively benign post-Ice Age conditions affected the evolution and spread of humanity across the globe? By setting our genetic history in the context of climate change during prehistory, the origin of many features of our modern world are identified and presented in this illuminating book. It reviews the aspects of our physiology and intellectual development that have been influenced by climatic factors, and how features of our lives - diet, language and the domestication of animals - are also the product of the climate in which we evolved. In short: climate change in prehistory has in many ways made us what we are today. *Climate Change in Prehistory* weaves together studies of the climate with anthropological, archaeological and historical studies, and will fascinate all those interested in the effects of climate on human development and history.

This is the story of a smart but a vulnerable girl, who had made her own 'touch me not world'. She was known to end up in unexpected situations, sometimes good and sometimes worst. The brim of life broke down when she was put down to face the bitter truth, the rage of money, the thinking of people around, and a realization of past mishaps. Struggling alone in a closed room was tough, but God did some good deeds too. She was blessed with a mentor, a lover, an admirer of her deeds, a publisher of her views, and a pace-maker for her crackling beats. But as said, it can't be a simple boy; she ends up falling for her own cousin, who had been brought up in a small city like Allahabad. Things were flowery among them under the nose of creepy uncles and aunts until the fatal hour. Society is brutal, not just for girls, even men are a hampered specie, probably society is all about elders and their confined way of thinking, and the sanity demanded to amend their thought process is the 'out-of-stock' thing in their market. This is a story of, fight for self-establishment, being smashed by the rules and regulations of the society, the struggle to keep a killed love alive, gathering back of torn away pieces, a push to make a new story, the strength injected by friendship, the insanity of departure. In short a story where every turn is unpredictable and every line is truly done with many dried up tears.

Offering fascinating insights into the people and politics of the ancient near Eastern kingdoms, Trevor Bryce uses the letters of the five Great Kings of Egypt, Babylon, Hatti, Mitanni and Assyria as the focus of a fresh look at this turbulent and volatile region in the late Bronze Age. Numerous extracts from the letters are constantly interwoven into the fabric of narrative and discussion, and this lively approach allows us to witness history through the eyes of the people who lived it, revealing the personalities and reactions of kings, queens, princes, princesses and royal officials more than 3500 years ago to the current events of the day.

#1 NEW YORK TIMES BESTSELLING PHENOMENON More than 6 million copies sold A Reese Witherspoon x Hello Sunshine Book Club Pick A Business Insider Defining Book of the Decade "I can't even express how much I love this book! I didn't want this story to end!"--Reese Witherspoon "Painfully beautiful."--The New York Times Book Review For years, rumors of the "Marsh Girl" have haunted Barkley Cove, a quiet town on the North Carolina coast. So in late 1969, when handsome Chase Andrews is found dead, the locals immediately suspect Kya Clark, the so-called Marsh Girl. But Kya is not what they say. Sensitive and intelligent, she has survived for years alone in the marsh that she calls home, finding friends in the gulls and lessons in the sand. Then the time comes when she yearns to be touched and loved. When two young men from town become intrigued by her wild beauty, Kya opens herself to a new life--until the unthinkable happens. *Where the Crawdads Sing* is at once an exquisite ode to the natural world, a heartbreaking coming-of-age story, and a surprising tale of possible murder. Owens reminds us that we are forever shaped by the children we once were, and that we are all subject to the beautiful and violent secrets that nature keeps.

The iconic and beautiful Great Barrier Reef Marine Park is home to one of the most diverse ecosystems in the world. With contributions from international experts, this timely and fully updated second edition

of The Great Barrier Reef describes the animals, plants and other organisms of the reef, as well as the biological, chemical and physical processes that influence them. It contains new chapters on shelf slopes and fisheries and addresses pressing issues such as climate change, ocean acidification, coral bleaching and disease, and invasive species. The Great Barrier Reef is a must-read for the interested reef tourist, student, researcher and environmental manager. While it has an Australian focus, it can equally be used as a reference text for most Indo-Pacific coral reefs.

From the moment we first began to contemplate the world, three questions have occupied our minds: Where do we come from?, What are we?, and Where are we going? Artists, religious thinkers, philosophers, and most recently scientists have all searched for answers. Here, the authors describe how scientists decipher human origin from the record encrypted in the DNA and protein molecules. After explaining the nature of descent and the methods available for studying genealogical relationships, they summarize the information revealed by the molecular archives. In doing so, they draw conclusions about our identity, our place in the living world, and our future.

In one of the greatest American classics, Baldwin chronicles a fourteen-year-old boy's discovery of the terms of his identity. Baldwin's rendering of his protagonist's spiritual, sexual, and moral struggle of self-invention opened new possibilities in the American language and in the way Americans understand themselves. With lyrical precision, psychological directness, resonating symbolic power, and a rage that is at once unrelenting and compassionate, Baldwin tells the story of the stepson of the minister of a storefront Pentecostal church in Harlem one Saturday in March of 1935. Originally published in 1953, Baldwin said of his first novel, "Mountain is the book I had to write if I was ever going to write anything else." "With vivid imagery, with lavish attention to details ... [a] feverish story." —The New York Times Pulitzer Prize winner Tracy Kidder memorably records the drama, comedy, and excitement of one company's efforts to bring a new microcomputer to market. Computers have changed since 1981, when *The Soul of a New Machine* first examined the culture of the computer revolution. What has not changed is the feverish pace of the high-tech industry, the go-for-broke approach to business that has caused so many computer companies to win big (or go belly up), and the cult of pursuing mind-bending technological innovations. *The Soul of a New Machine* is an essential chapter in the history of the machine that revolutionized the world in the twentieth century.

This monograph explores the concept of mobility in Zimbabwean works of fiction published in English between the introduction of the controversial Fast Track Land Reform Programme and the end of the Mugabe era. Since 2000, Zimbabwe has experienced unprecedented levels of transnational out-migration in response to the political conflicts and economic downturn often referred to as the Zimbabwe Crisis. This, in turn, has led to an increased outpouring of literary texts about migration, both in locally produced texts and in works by authors based in the diaspora. Situating Zimbabwe's recent literary developments in a wider context of Southern African writing and history, this book focuses on texts that portray movement within Zimbabwe's cities, between village and city, to South Africa, and overseas. The author examines important developments and trends in recent Zimbabwean literature, investigating the link between state authoritarianism and control of mobility, and literature's potential to intervene into dominant political discourses. The book includes in-depth analyses of ten recent works of fiction published in the post-2000 era and develops mobility as a key category of literary analysis of Zimbabwe's contemporary literatures. Setting out a rich dialogue between literary criticism and mobility studies, this book will be of interest to researchers of African literature, Southern Africa, migration, and mobility. From early human civilisation to today, this book illuminates the history of southern Africa. Interweaving social, cultural and political history, archaeology, anthropology and environmentalism, Neil Parsons and Alois Mlambo provide an engaging account of the region's varied past. Placing African voices and agency at centre stage rather than approaching the subject through a colonial lens, *A History of Southern Africa* provides an engrossing narrative of the region. This textbook is ideal for both undergraduate and postgraduate students of History and African Studies, and will provide an essential grounding for those taking courses in the history of southern Africa. Its lively and accessible approach will appeal to anyone with an interest in global history.

When he called India a "functioning anarchy," economist Kenneth Galbraith may have been thinking about Uttar Pradesh (UP), in northern India. Some Indians laughingly refer to Uttar Pradesh as a "loser state." Known as a home of deep poverty, incurable corruption and sticky social problems, UP is not the India that now appears regularly in *The New York Times* and *Newsweek*. This is the other India; the one that modernity has largely left behind, and this book is the result of Rick Connerney's repeated residencies over the last 18 years in that state. Most of India's 1.13 billion people live far from the call centers of Bangalore and Delhi and Westernized cities like Mumbai. A huge slice of humanity, 17.5% of the world's population, is practically invisible and impenetrable to most Americans. Exploring the realities of agriculture, business, the environment, politics, the economy, marriage, language and the arts, the author introduces the real people of India. At the heart of each chapter lies an epiphany about Indian culture — Copernican intellectual shifts, radical reverses in the way the author made sense of the environment, when the evidence seemed to support one conclusion but further experience pointed to a different answer."

Seventeen papers demonstrate how zooarchaeologists engage with questions of identity through culinary references, livestock husbandry practices and land use. Contributions combine hitherto unpublished zooarchaeological data from regions straddling a wide geographic expanse between Greece in the West and India in the East and spanning a time range from the latest part of the Palaeolithic to the Middle Ages. The vitality of a hands-on approach to data presentation and interpretation carried out primarily at the level of the individual site — the arena of research providing the bread and butter of zooarchaeological work conducted in southwest Asia — is demonstrated. Among the themes explored are shifting identities of late hunter-gatherers through interactions with settled agrarian societies; the management of camp sites by early complex hunter-gatherers; processes of assimilation of Roman culinary practices among Egyptian elites; and the propagation of medieval pilgrim identity through the use of seashell insignia. A wealth of new data is discussed and a wide variety of applications of analytical approaches are applied to particular case studies within the framework of social and contextual zooarchaeology. The volume constitutes the proceedings of the 11th meeting of the ICAZ Working Group - Archaeozoology of Southwestern Asia and Adjacent Areas (ASWA).

An exciting blend of geography, history, archaeology, anthropology, landscape, environment and science, it seeks to reveal how human activity has affected the environment in the past and how we, in turn, have been affected by that environment. How did people use and transform their environment? What problems of pollution and resource depletion occurred? What has been the impact of industrialisation and urbanisation? How have people's perceptions of nature and the environment changed over time? Environmental historians are revealing how and why our environment changed in the past, they are providing key insights into the mechanisms that influence environmental change today, and are helping to make informed decisions on crucial environmental concerns such as deforestation, desertification, pollution, global warming and climate change. Professor Whyte's A Dictionary of Environmental History provides in a single volume a comprehensive reference work covering the past 12,000 years of the Earth's environmental history. An introduction to the discipline is followed by almost 1,000 entries covering key terminology, events, places, dates, topics, as well as the major personalities in the history of the discipline. Entries range from shorter factual accounts to substantial mini-essays on major topics and issues. Fully cross-referenced and with an extensive bibliography, this pioneering work provides an authoritative yet accessible resource that will form essential reading for academics, practitioners and students of environmental history and related disciplines.

Tut has grown into his position as Pharaoh, but he is a wild young man. Naomi fears for him, not only because of his recklessness, but because he has put his trust in Ay—the man determined to destroy Naomi—despite her and Horemheb advising against it. Meanwhile, death and slavery hang over Naomi and her family. With fear of the booming Hebrew numbers causing talk of enslaving them, conscription is reinstated and Naomi fears for the lives of her other children. Especially since Ay's children are now adults, and just as dangerous as their father. They threaten to take Itani, conspire against Tut, and pushing for power. But Tut is in trouble. While Ay's daughter draws Horemheb's attention, and Naomi deals with the struggles of her family, everyone's distraction could spell death for the young Pharaoh.

This Brief deals with the reconstruction of Holocene paleoenvironment in the central part of Bangladesh in relation to relative sea-level (RSL) changes which is 200 km north from the present coastline. Lithofacies characteristics, mangal peat, diatom and paleophysiological evidences were considered to reconstruct the past position and C-14 ages were used to determine the time of formation of the relative sea-level during the Holocene. With standard reference datum the required m.s.l. at the surface of five sections are calculate and the RSL curve suggests that Bangladesh has experienced two mid Holocene RSL transgressions punctuated by regressions. The abundant marine diatom and mangrove pollens indicates that the highest RSL transgression in Bangladesh is around 6000 cal BP which is attained at least 4.5 to 5m higher than the modern m.s.l. After this phase, the relative sea-level started to fall and consequently a freshwater peat developed around 5980?5700 cal BP. The abundant mangrove pollens in salt-marsh succession shows the regression around 5500 cal BP and, the height was 1?2 m higher than the modern sea level. These and more interesting findings are discussed in this Brief.

Passion hotter than the Egyptian sun... In the Great Pyramid of King Khufu, resourceful Kiya works tirelessly, disguised as a boy. But then fearsome raiders arrive and, running for her life, she is captured by a hardened desert trader... When he realizes what a beauty he has enslaved, Tahar knows he could—and should—sell her for a handsome price. But Kiya is not easily tamed. And when a wild heat explodes between them, shattering all thoughts of resistance, Tahar must find a way to keep her as his own!

Now in full-color, the Second Edition of Human Evolutionary Genetics has been completely revised to cover the rapid advances in the field since publication of the highly regarded First Edition. Written for upper-level undergraduate and graduate students, it is the only textbook to integrate genetic, archaeological, and linguistic perspectives on human evolution, and to offer a genomic perspective, reflecting the shift from studies of specific regions of the genome towards comprehensive genomewide analyses of human genetic diversity. Human Evolutionary Genetics is suitable for courses in Genetics, Evolution, and Anthropology. Those readers with a background in anthropology will find that the streamlined genetic analysis material contained in the Second Edition is more accessible. The new edition also integrates new technologies (including next-generation sequencing and genome-wide SNP typing) and new data analysis methods, including recent data on ancient genomes and their impact on our understanding of human evolution. The book also examines the subject of personal genomics and its implications.

The main driver of inequality—returns on capital that exceed the rate of economic growth—is again threatening to generate extreme discontent and undermine democratic values. Thomas Piketty's findings in this ambitious, original, rigorous work will transform debate and set the agenda for the next generation of thought about wealth and inequality. The aim of this book is to explore labour law's conceptual and normative narrative. If labour law is informed by the wider political and economic landscape within which it operates, then given the declining prevalence of the post-war model of full employment within a formal welfare state regime, what shape does or should labour law assume in

response to the transformation of the political economy in countries of the global North? Correspondingly, what is the proper role to be played by labour law and labour relations institutions in the development process within industrialising countries of the global South, where informal employment has long been, and remains, the predominant form? Drawing on the expertise of leading labour law scholars, this collection addresses those questions by examining the growth and continued prevalence of informality. Offering research that is both empirically grounded and doctrinally astute, the book explores the changing character of labour law in the global North and South.

For thousands of years, humans have probed and pondered over our planetary home. How was the Earth formed? How old is it? How did it become a living world? Today, because of our expanded knowledge and the wonders of technology, we know a lot more about Earth than our ancestors. We know that it is an evolving planet, undergoing never-ending changes, perhaps at a pace unequalled in its recent, or even remote, past. The Story of Planet Earth gives a detailed, yet interesting, account of a lot more aspects related to the creation of Earth – Earth's origin in light of the Big Bang explosion, arrival of water on its surface, formation of its atmosphere, evolution of life forms from unicellular organisms to giants like dinosaurs, changes from its core to crust and its current state in terms of unsettling global changes, a majority of which find their roots in our greed and thoughtlessness. The book goes beyond time, into the future, to see what may be in store for our forthcoming generations, if we don't care about this "home" of ours.
