USA Today Bestselling Author Erin McCarthy The Lady of the Lake Pro baseball player Dylan Diaz is pretty sure he's going to hell. But the minute sputtering kindergarten teacher Violet Caruthers is on Dylan's boat, that's all he can think about. Maybe it's the potent combo of a nun's personality inside a stripper's body. Power Beyond Scrutiny uncovers the forces which distort and limit public debate in the media. From the misuse of politician's expenses to recent phone hacking scandals, establishment corruption has never been more in the headlines. Yet amidst the din of scandal, there have been seismic silences. Justin Schlosberg interrogates these silences - why did a plea bargain which allowed Britain's biggest arms company to escape bribery prosecution, go almost entirely unchallenged in television news? Why did journalists routinely endorse the official explanation of how intelligence analyst David Kelly died, while all but ignoring mounting evidence which undermined it? Why, in 2010, did broadcasters offer an unchallenged platform to critics of Wikileaks but not its supporters? These are some of the questions and imbalances that Schlosberg seeks to address as he explains the nature of public debate in the digital age. In doing so he uncovers a range of news blockages that are more than just accidents of a fragmented, chaotic mediascape. They are ultimately ideological forces which ensure that contestability and dissent remain within definable limits.

This study examines France's determination to remain aloof and unaffected as the world economy threatens the French way of doing business. Describing the difficulty in initiating change in French organizations, the author tells of the obstacles he encountered in attempting to modernize the working practices of a Paris firm. His observations are based upon customs and habits peculiar to the French, yet they apply equally to all foreign cultures. Management methods, attitudes to the outside world, and the historic roots of the French mentality are viewed and explained anecdotally, based on the author's experience of living and working in France, and are accompanied by humorous illustrations.

All coastal areas are facing a growing range of stresses and shocks, the scale of which now poses threats to the resilience of both human and environmental coastal systems. Responsible agencies are seeking better ways of managing the causes and consequences of the environmental change process in coastal zones. This volume discusses the basic principles underpinning a more integrated approach to coastal management and highlights the obstacles that may be met in practice in both developed and developing countries. Successful strategies will have to encompass all the elements of management, from planning and design through financing and implementation, as highlighted in this book.

This volume is the second in the series of final reports on the work of the Kavousi Project and the first volume on the cleaning (1982-1984) and excavations (1987-1992) at the mountain sites located above the modern village of Kavousi in eastern Crete. These sites, Vronda and the Kastro, shed light on the Early Iron Age, the transitional period in Cretan history known popularly as the Dark Ages, thereby elucidating the way of life of the people who lived in the area of Kavousi during that period and how their culture changed over time. Kavousi IIA is

devoted to the excavation of material from the Late Minoan III C settlement at Vronda, particularly the houses on the summit of the Vronda ridge (Buildings A-B, C-D, J-K, and Q), along with earlier (Building P) and later (Building R) structures around them.

The Force is strong with this series! Introducing a line of workbooks that marries the iconic popularity of Star Wars with the unique mix of editorial quality, fun presentation, and rigorous educational standards that Workman applied to the BRAIN QUEST Workbooks. Twelve titles launch the series—three each for Pre-K through 2nd Grade—and dig deep into core subjects, including numbers, ABCs, phonics, and reading readiness for younger grades, and math, reading, and writing for the older ones. The material, which aligns with national Common Core State Standards, is designed to reinforce essential concepts and lessons taught in schools. Any child, not just fans of Star Wars—but yes, those fans will be especially delighted (as will reluctant learners)—will love the *ÒÁ* is for Anakin approach to phonics. Kids will practice learning numbers by counting and circling X-wing starfighters and clone troopers. Master place values by sorting groups of Wookiees. There are math problems—Yoda is holding 7 lightsabers. 5 of the lightsabers are blue. The rest are green. How many green lightsabers is he holding? And Language Arts—Circle the correct homophone in this sentence: Luke is a Jedi knight/night. Featuring favorite characters like Luke Skywalker, Queen Amidala, Yoda, and Obi-Wan Kenobi, and other creatures, monsters, Jedi, and Sith, the workbooks are filled with thousands of original illustrations drawing from all six Star Wars movies and the expanded Star Wars universe. Learn well, you will.

Pathwise estimation and inference for diffusion market models discusses contemporary techniques for inferring, from options and bond prices, the market participants' aggregate view on important financial parameters such as implied volatility, discount rate, future interest rate, and their uncertainty thereof. The focus is on the pathwise inference methods that are applicable to a sole path of the observed prices and do not require the observation of an ensemble of such paths. This book is pitched at the level of senior undergraduate students undertaking research at honors year, and postgraduate candidates undertaking Master's or PhD degree by research. From a research perspective, this book reaches out to academic researchers from backgrounds as diverse as mathematics and probability, econometrics and statistics, and computational mathematics and optimization whose interest lie in analysis and modelling of financial market data from a multi-disciplinary approach. Additionally, this book is also aimed at financial market practitioners participating in capital market facing businesses who seek to keep abreast with and draw inspiration from novel approaches in market data analysis. The first two chapters of the book contains introductory material on stochastic analysis and the classical diffusion stock market models. The remaining chapters discuss more special stock and bond market models and special methods of pathwise inference for market parameter for different models. The final chapter describes applications of numerical methods of inference of bond market parameters to forecasting of short rate. Nikolai Dokuchaev is an associate professor in Mathematics and Statistics at Curtin University. His research interests include mathematical and statistical finance, stochastic analysis, PDEs, control, and signal processing. Lin Yee Hin is a practitioner in the capital market facing industry. His research interests include econometrics, non-parametric regression, and scientific computing.

Research on the topic of clusters and industrial districts is very extensive. However, most of it has focused more on understanding the past than on trying to map out the future. The aim of this book is to fill this gap by identifying and discussing the main research topics that populate the current scientific debate and highlight the emergent lines of research that will constitute the future research agenda. It does so by drawing on the debate started with the "rethinking clusters" workshops, which in a short time have become a rich place for discussion among cluster scholars around the world. Rethinking Clusters: Towards a New Research Agenda for Cluster Research collects contributions from authoritative colleagues, who cover a number of relevant and timely issues, such as the territorial roots of radical innovation processes, new ways of understanding and measuring the role of place in economic development, path renewal, internationalization and entrepreneurship. The final section is devoted to the critical analysis of policies that support smart specialization. The chapters in this book were originally published as a special issue of the journal European Planning Studies.

This book proposes a revisionist approach to democratic politics. Yaron Ezrahi focuses on the creative unconscious collective imagination that generates ever-changing visions of legitimate power and authority, which compete for enactment and institutionalization in the political arena. If, in the past, political authority was grounded in fictions such as the divine right of kings, the laws of nature, historical determinism and scientism, today the space of democratic politics is filled with multiple alternative social imaginaries of the desirable political order. Exposure to electronic mass media has made contemporary democratic publics more aware that credible popular fictions have greater impact on shaping our political realities than do rational social choices or moral arguments. The pressing political question in contemporary democracy is, therefore, how to select and enact political fictions that promote peace and how to found the political order on checks and balances between alternative political imaginaries of freedom and justice.

More than twenty years have passed since Walter Auffenberg's monumental *The Behavioral Ecology of the Komodo Monitor*. In the intervening years the populations of Komodo dragons—native only to a handful of islands in southeast Indonesia—have dwindled, sparking intensive conservation efforts. During the last two decades new information about these formidable predators has emerged, and the most important findings are clearly presented here. A memoir from Walter Auffenberg and his son Kurt is followed by the latest information on Komodo dragon biology, ecology, population distribution, and behavior. The second part of the book is dedicated to step-by-step management and conservation techniques, both for wild and captive dragons. This successful model is a useful template for the conservation of other endangered species as well, for, as Kurt and Walter Auffenberg note, “The species may well indeed survive in the wild for generations to come while countless other organisms are lost.”
