The new edition has been thoroughly revised and updated and includes key cases such as the House of Lords decisions in *Royal Bank of Scotland v Etridge (No. 2)*(2001); and *Bruton v London & Quadrant Housing Trust* (2000). The text also covers the major developments brought about by the Land Registration Act 2002.

This book reviews the common law principles that underpin modern land use regulations, including covenants and restrictions that work with government regulation to limit the use of private property. The Nutshell clearly explains the legal aspects of land planning and regulation, project review processes, and innovative and flexible regulatory devices. Subdivision and site plan regulation, local environment law, discrimination in zoning, regulatory takings, inverse condemnation, and community development practices are all explored. In addition, the book discusses the law of smart growth, and addresses current trends in land use law including the siting of renewable energy facilities. An appendix of internet-based resources is also provided. Law and planning students will find that this Nutshell covers the key cases in all land use law textbooks, and seasoned practitioners and planners will find the organization and approach to dozens of subject areas beneficial to their understanding of land use law. Coastal and Ocean Management Law in a Nutshell surveys the continually evolving law of the coasts and oceans. The material is unique because it does not analyze the law of a discreet substantive field of law, but instead looks at the law in relation to a place - the coasts and oceans. These areas are viewed from common law and modern regulatory perspectives, from the federal and state levels, and from an international perspective. Starting with principles of

the common law concerning the public trust doctrine and ownership of waters and coastal lands, the book moves to modern issues of beach access, coastal development and regulation of coastal resources, and the Coastal Zone Management Act. Offshore resource management issues, including outer continental shelf oil development and mining, fisheries, historic wrecks, navigation and pollution control, and protection of marine species are also surveyed. Finally, recent developments in the law of the sea and the United States' ocean law and policy responses are reviewed.

This book offers a concise, knowledgeable guide to the laws governing administrative agencies. In straightforward, readable prose, the authors not only summarize the dominant statutes and case law in the area, but also discuss informal administrative processes and the background realities of the regulatory state. Students can use the book as a complement to any major casebook, and practitioners will also find it an excellent brief introduction to this often confusing subject.

Academically rigorous yet welcoming and fully attuned to the needs of the student reader, Chris Bevan's Land Law represents a new breed of textbook, blending traditional and contemporary teaching approaches to guide its readers to a confident understanding of the subject. With its lively, engaging writing style - in which the author's enthusiasm is always apparent - and distinctive way of speaking directly to students, anticipating their questions and areas of confusion, Bevan's book does not simply set out the law but actively teaches it. Clear explanations are complemented by frequent, carefully-crafted visual aids, conveying key concepts in ways that all students can understand, and topics are broken down into sections that are easy to digest and navigate. This book maintains a critical emphasis and encourages students to consider and understand the law in context (both within society and their degree), not just in the abstract. "Key case" boxes offer concise insights on leading cases that pique students' interest, spurring them to conduct their own reading of primary material, and although the book reflects on historical background in order to make sense of today's law, its overriding perspective is forward-looking, epitomised in the "Future directions" conclusions for each chapter which consider future implications and likely reforms. Balancing brevity with detail and rigour with accessibility, Land Law is a truly modern textbook that supports and motivates its

complex entity known to mankind. We are in an age of fantastic and prolific neurological research with advances occurring faster than in any other scientific field. This research promises to help us with our mental health, social adjustment, satisfaction with life, our ability to learn, and our ability to remember, (and forget). The brain contains approximately 90 billion neurons. We are beginning to understand their functions more and more each day. This three-pound organ the shape of a cauliflower has fascinated man for centuries. The study of the brain is now less philosophical and more scientific. As neurological research becomes more and more enlightening and practical, a general understanding of the brain and the major issues of neurological science become more important. It is not rocket science or brain surgery (pun intended) to have a basic understanding of the state of our knowledge of the brain today. This book will acquaint the reader with thirty of the most important and interesting topics in the study of the brain. The author will assume that the reader has limited knowledge of the brain and its functions, and will present information in every day language with very limited use of scientific jargon. The brain is responsible for how we perceive our world and how we behave in it. Let us begin our journey of understanding it.
