The integration of sliding mode in engineering systems has been a focus of research for many years. However, the use of this method in non-engineering systems still requires a better understanding. *Sliding Mode in Intellectual Control and Communication: Emerging Research and Opportunities* is a pivotal reference source that intends to fill the gap of available knowledge on characteristics of sliding mode in non-engineering contexts. Highlighting a range of pertinent topics such as information processing, intelligent agents, and virtual communications, this book is ideally designed for researchers, academics, students, and professionals interested in the latest developments in sliding mode techniques and applications.

With limited empirical research available on online teaching across cultures especially with Native and Hispanic American students, this book will present the findings of a two-year, Spencer-funded study in creating an inclusive (i.e., multicultural and intergenerational) instructional design model for online learning. The book is expected to provide the readers a field guide of teaching approach (comprising pedagogical, technical, relational and other suggestions for teaching) for inclusive e-learning, with a foundation in the research on how students from different cultures and generation groups learn online. This two-year, multi-course-site study, as a first effort to examine online college teaching and learning effective across culture and age, contributed a list of important findings on the following questions: • To what extent are online learning and interaction experiences and performances consistent across varied ethnic/cultural, and age groups and in what ways do they vary? • What online instructional contexts do students and faculty, especially non-traditional and minority students, identify as supporting learning and student success? • What are the relationships between online instructional contexts, online learning performance, and learning success of students with diverse ethnicity/culture and age background? By consolidating the findings for the aforementioned research questions, the researchers of this study have developed a data-driven online instructional design model that can work as a field guide on cross-cultural and intergenerational teaching and learning for online education practitioners.

This book provides an overview of the complex role that culture plays in workplace contexts. In eight chapters, the authors cover the core aspects of culture at work from making decisions and negotiating power to gender and identity. Drawing on insights from a range of studies, they propose a new integrated framework for researching culture at work from a sociolinguistic perspective, and they apply it to the significant corpus of authentic workplace data they have collected from numerous settings in the UK, Hong Kong and New Zealand. This is key reading for researchers and recommended for advanced students of workplace and intercultural communication, sociolinguistics and discourse studies.

Language, Culture, and Communication: The Meaning of Messages

This book investigates the social, political and educational role of community language education in migratory contexts. It draws on an ethnographic study that investigates the significance of Mandarin-Chinese community schooling in Britain as an intercultural space for those involved. To understand the interrelation of 'language', 'culture' and 'identity', the book adopts a 'bricolage' approach that brings together a range of theoretical perspectives. This book challenges homogenous and stereotypical constructions of Chinese language, culture and identity – such as the image of Chinese pupils as conformist and deferent learners – that are often repeated both in the media and in academic discussion.

James M. Wilce's new textbook introduces students to the study of language as a tool in anthropology. Solidly positioned in linguistic anthropology, it is the first textbook to combine clear explanations of language and linguistic structure with current anthropological theory. It features a range of study aids, including chapter summaries, learning objectives, figures, exercises, key terms and suggestions for further reading, to guide student understanding. The complete glossary includes both anthropological and linguist terminology. An Appendix features material on phonetics and phonetic representation. Accompanying online resources include a test bank with answers, useful links, an instructor's manual, and a sign language case study. Covering an extensive range of topics not found in existing textbooks, including semiotics and the evolution of animal and human communication, this book is an essential resource for introductory courses on language and culture, communication and culture, and linguistic anthropology.

This collection critically examines tourism as a site of intercultural communication, drawing on the analytical tools afforded by the discipline toward better understanding contemporary tourism discourses and the broader societal structures of power and ideologies in which they are situated. The volume interrogates culture and interculturality in tourism in detailed analyses of discursive details in tourism interactions and focuses on the notion of culture as a process or phenomenon engaged in or enacted on by

individuals. Drawing on discourse analytic and ethnographic approaches, the book brings together perspectives from the lived experiences of residents, hosts, and ethnographers to explore the extent to which linguistic and cultural differences are constructed, identities negotiated, and power relations maintained and perpetuated in tourism encounters. The volume draws on insights from those working across a range of geographic contexts and explores the interplay of these issues in English as well as other languages and language varieties used in tourism interactions. With its focus on critical approaches to understanding language and culture, this book will appeal to students and scholars in intercultural communication, applied linguistics, sociolinguistics, linguistic anthropology, discourse analysis, and tourism studies.

What do linguistic anthropologists do? Why should we study language? How do the ways in which we communicate define our identities? And how is this all changing in the digital world? Since 1993, professors and students have turned to *Language, Culture, and Society* for answers to questions like those above because of its comprehensive coverage of all critical aspects of linguistic anthropology. This seventh edition continues the original “Americanist” vision of linguistic anthropology while addressing some of the newer pressing and exciting challenges of the twenty-first century, such as issues of language and power, language ideology, and linguistic diasporas. Chapters on gender, race, and class also examine how language helps create—and is created by—identity. New to this seventh edition are enhanced and updated pedagogical features, such as learning objectives at the beginning of each chapter, updated discussion questions and resources for continued learning, and the inclusion of a glossary of terms to help orient readers. There is also an expanded discussion of communication online and of social media outlets and how that universe is changing how we interact with one another. The discussion on race and ethnicity has also been updated to include an examination of Latin-American English vernacular. This seventh edition continues on the legacy of *Language, Culture, and Society* as the premier textbook for linguistic anthropology.

A bold and provocative study that presents language not as an innate component of the brain—as most linguists do—but as an essential tool unique to each culture worldwide. For years, the prevailing opinion among academics has been that language is embedded in our genes, existing as an innate and instinctual part of us. But linguist Daniel Everett argues that, like other tools, language was invented by humans and can be reinvented or lost. He shows how the evolution of different language forms—that is, different grammar—reflects how language is influenced by human societies and experiences, and how it expresses their great variety. For example, the Amazonian Pirahã put words together in ways that violate our long-held understanding of how language works, and Pirahã grammar expresses complex ideas very differently than English grammar does. Drawing on the Wari’ language of Brazil, Everett explains that speakers of all languages, in constructing their stories, omit things that all members of the culture understand. In addition, Everett discusses how some cultures can get by without words for numbers or counting, without verbs for “to say” or “to give,” illustrating how the very nature of what’s important in a language is culturally determined. Combining anthropology, primatology, computer science, philosophy, linguistics, psychology, and his own pioneering—and adventurous—research with the Amazonian Pirahã, and using insights from many different languages and cultures, Everett gives us an unprecedented elucidation of this society-defined nature of language. In doing so, he also gives us a new understanding of how we think and who we are.

Exploring language, culture and education among immigrants in the United States, this volume discusses the range of experiences in raising children with more than one language in major ethno-linguistic groups in New York. Research and practice from the fields of speech-language pathology, bilingual education, and public health in immigrant families are brought together to provide guidance for speech-language pathologists in differentiating language disorders from language variation, and for parents on how to raise their children with more than one language. Commonalities among dissimilar groups, such as Chinese, Korean, and Hispanic immigrants are analyzed, as well as the language needs of Arab-Americans, the home literacy practices of immigrant parents who speak Mixteco and Spanish, and the crucial role of teachers in bridging immigrants’ classroom and home contexts. These studies shed new light on much-needed policy reforms to improve the involvement of culturally and linguistically diverse families in decisions affecting their children’s education.

In this interdisciplinary book, Juliane House breaks new ground by situating translation within Applied Linguistics. In thirteen chapters, she examines translation as a means of communication across different languages and cultures, provides a critical overview of different approaches to translation, of the link between culture and translation, and between views of context and text in translation. Featuring an account of translation from a linguistic-cognitive perspective, House covers problematic issues such as the existence of universals of translation, cases of untranslatability and ways and means of assessing the quality of a translation. Recent methodological and research avenues such as the role of corpora in translation and the effects of globalization processes on translation are presented in a neutral, non-biased manner. The book concludes with a thorough, historical account of the role of translation in foreign language learning and teaching and a discussion of new challenges and problems of the professional practice of translation in our world today. Written by a highly experienced teacher and researcher in the field, *Translation as Communication across Languages and Cultures* is an essential resource for students and researchers of Translation Studies, Applied Linguistics and Communication Studies.

In line with the overall perspective of the Handbook series, the focus of Vol.9 is on language-related problems arising in the context of linguistic diversity and change, and the contributions Applied Linguistics can offer for solutions. Part I, “Language minorities and inequality,” presents situations of language contact and linguistic diversity as world-wide phenomena. The focus is on indigenous and immigrant linguistic minorities, their (lack of) access to linguistic rights through language policies and the impact on their linguistic future. Part II “Language planning and language change,” focuses on the impact of colonialism, imperialism, globalisation and economics as factors that language policies and planning measures must account for in responding to problems deriving from language contact and linguistic

diversity. Part III, "Language variation and change in institutional contexts," examines language-related problems in selected institutional areas of communication (education, the law, religion, science, the Internet) which will often derive from socioeconomic, cultural and other non-linguistic asymmetries. Part IV, "The discourse of linguistic diversity and language change," analyses linguistic diversity, language change and language reform as issues of public debates which are informed by different ideological positions, values and attitudes (e.g. with reference to sexism, racism, and political correctness). The volume also contains extensive reference sections and index material.

An innovative text which adopts the tools of cultural studies to provide a fresh approach to the study of Chinese language, culture and society. The book tackles areas such as grammar, language, gender, popular culture, film and the Chinese diaspora and employs the concepts of social semiotics to extend the ideas of language and reading. Covering a range of cultural texts, it will help to break down the boundaries around the ideas and identities of East and West and provide a more relevant analysis of the Chinese and China.

New technologies are constantly transforming traditional notions of language use and literacy in online communication environments. While previous research has provided a foundation for understanding the use of new technologies in instructed second language environments, few studies have investigated new literacies and electronic discourse beyond the classroom setting. This volume seeks to address this gap by providing corpus-based and empirical studies of electronic discourse analyzing social and linguistic variation as well as communicative practices in chat, discussion forums, blogs, and podcasts. Several chapters also examine the assessment and integration of new literacies. This volume will serve as a valuable resource for researchers, teachers, and students interested in exploring electronic discourse and new literacies in language learning and teaching.

This book shifts the common perception of specialised or 'LSP' translation as necessarily banal and straightforward towards a more realistic understanding of it as a complex and multilayered phenomenon which belies its standard negative binary definition as 'non-literary'.

The book presents a new theory of the relationship between language and culture in a transnational and global perspective. The fundamental view is that languages spread across cultures, and cultures spread across languages, or in other words, that linguistic and cultural practices flow through social networks in the world along partially different paths and across national structures and communities. For courses in Language and Culture, Anthropological Linguistics, and Language and Communication. Using data from cultures and languages throughout the world to highlight both similarities and differences in human languages this text explores the many interconnections among language, culture, and communicative meaning.
