MORE THAN THIRTY YEARS AFTER IT WAS written, the autobiography of Carson McCullers, *Illumination and Night Glare*, will be published for the first time. McCullers -- one of the most gifted writers of her generation, author of *The Member of the Wedding*, *Reflections in a Golden Eye*, and "The Ballad of the Sad Cafe" -- died of a stroke at the age of fifty before finishing this, her last manuscript. Editor Carlos L. Dews has faithfully brought her story back to life, complete with never-before-published letters between McCullers and her husband Reeves, and an outline of her most famous novel, *The Heart Is a Lonely Hunter*. Looking back over her life from a precocious childhood in Georgia to her painful decline after a series of crippling strokes, McCullers offers poignant and unabashed remembrances of her early writing success, her family attachments, a troubled marriage, friendships with literary and film luminaries (Gypsy Rose Lee, Richard Wright, Isak Dinesen, John Huston, Marilyn Monroe), and her intense relationships with the important women in her life. When she was interviewed by Rex Reed in the Plaza Hotel on her final birthday, McCullers revealed her reason for writing an autobiography: "I think it is important for future generations of

students to know why I did certain things, but it is also important for myself. I became an established literary figure overnight, and I was much too young to understand what happened to me or the responsibility it entailed. I was a bit of a holy terror. That, combined with all my illnesses, nearly destroyed me. Perhaps if I trace and preserve for other generations the effect this success had on me it will prepare future artists to accept it better".

It is now recognized that defective placentation in the human is a cause of many pregnancy complications, such as spontaneous abortion, preterm labor and delivery, pre-eclampsia, intrauterine growth restriction, fetal death and abruptio placenta. These clinical disorders can often have long-term consequences into adulthood, causing cardiovascular disease, obesity and diabetes for the newborn as well as an increased risk of premature death in the mother. This is the first book to be entirely focused on the placental bed, bringing together the results of basic and clinical research in cell biology, immunology, endocrinology, pathology, genetics and imaging to consolidate in a single, informative source for

This book makes Hazardous or Electrical Area Classification simple. In plants processing flammable materials, every effort is made to avoid the escape of such materials and in addition, stringent measures are taken to exclude sources of ignition. A complex array of standards surround this topic which has lead to an overly conservative approach being taken. This type of approach means that much more expensive electrical apparatus than is necessary is installed. To

avoid this unnecessary expenditure, Dr Groh clearly explains the relevant standards, so that accurate assessment of the risks associated with hazardous areas is possible. He also identifies possible ignition sources and methods of designing apparatus which do not cause sparks thereby maintaining safety. \* Covers must-have information regarding IEC/CENELEC standards in electrical or hazardous area classification \* Provides a clear overview of a complex area

Set in post-war Britain, this Potter screenplay has been made into a C4 TV series. It is the time of Suez and the setting is the War Office - half of the department's incumbents are true army men, British to the core and proud of it, but the remainder are world-weary national servicemen, aching to get into the civvies and the promise of a new life. Post-war austerity is still with us, but the younger style is making itself felt - and Potter's rock 'n' roll music reflects this.

Book 2 of the "Great Death" series. A Post-Apocalyptic world unlike any other. Instead of banding together or fighting each other, here the survivors find a world with few resources, little trust and no desire to intermingle. Fears of disease prevent survivors from reaching out for help. How does society survive if the survivors won't participate? A follow-up to "Love and Family During the Great Death". It's much less bleak, and reading the first book isn't strictly necessary, so those who couldn't handle the first shouldn't be afraid of this one. Picking up after everyone else has died, David and Alice try to determine who, if anyone has survived, and why they did. The series of plagues they survived proved effective, as society is laid bare, but they realize they must organize the reluctant survivors, as the Great Death isn't finished, and further disasters await.

Jack Frost has always tried to live down his whimsical name -- a gift from his playful parents -- and he does his best to deter Merry from making what he considers a kitschy mockery of the town and the season. But she believes that below Jack's frosty exterior is a warm heart -- and that she is the one to thaw it.

A clear-eyed look at the instrumental role drugs have played in our cultural, social, and spiritual development. • First American publication of the surprising European bestseller. • Examines everything from the ancient use of ergot and datura to the modern phenomenon of "designer" drugs such as Ecstasy and crack cocaine. From remotest antiquity to the present era of designer drugs and interdiction, drugs have played a prominent role in the cultural, spiritual, and social development of civilizations. Antonio Escohotado demonstrates how the history of drugs illuminates the history of humanity as he explores the long relationship between mankind and mind-altering substances. Hemp, for example, has been used in India since time immemorial to stimulate mental agility and

sexual prowess. Aristotle's disciple Theophrastus testifies to the use of datura by the ancient Greeks and further evidence links the rites at Eleusis to the ingestion of a hallucinogen. Similar examples can be found in cultures as diverse as the Celts, the ancient Egyptians, the Aztecs, and other indigenous peoples around the world. Professor Escotado also looks at the present-day differences that exist between the more drug-tolerant societies like Holland and Switzerland and countries advocating complete repression of these substances. The author provides a comprehensive analysis of the enormous social costs of the drug war that is coming under increasing fire from all levels of society. Professor Escotado's work demonstrates that drugs have always existed and been used by societies throughout the world and the contribution they have made to humanity's development has been enormous. The choice we face today is to teach people how to use them correctly or to continue to indiscriminately demonize them. "Just say no," the author says, is not an option. Just say "know" is. Antonio Escotado is a professor of philosophy and social science methodology at the National University of Distance Education in Madrid, Spain. He travels widely, offering lectures and seminars on the subject of drugs and history.

Pregnancy complicated by neurological disorders is a challenging area for both obstetricians and neurologists. Treatment of the maternal condition often needs to be adjusted because of concerns for the fetus, and some conditions have a major impact on the method, mode, and timing of delivery. Many of the clinical problems that arise in pregnant women with a neurological disease have not

been the subject of clinical trials, so management must often be based on what published evidence is available and a good understanding of the likely interactions between the condition and pregnancy and vice versa. The editors and contributors represent a team with considerable experience in this area. They offer their "best practice" advice as how to treat the mother effectively, ensuring fetal safety, as well as embracing a philosophy that the pregnancy of a woman with a neurological disease should be made as enjoyable and rewarding for her as is possible.
