A 16 year-old high school dropout leaves home to avoid incarceration in a Juvenile Court Detention Center for placement in an orphanage. Using a falsified birth certificate he enlists in the army where he finds himself in an extremely hostile environment. Seeking refuge in the army, he discovers that he cannot run away from himself or escape the family curse. As a member of the elite United States Army Constabulary in occupied-Germany, he faces the greatest challenge of his life amid the war torn ruins of a conquered nation. The book describes, in lurid detail, the misadventures of the men in the lower echelons of the military establishment and the effects of their relationships with the German populace. As a fraudulent enlistee, he lives in constant fear of being discovered. He is further plagued by premonitions of doom by the family "curse", the result of an unconscionable sin committed by his maternal grandfather. Born into an impoverished, dysfunctional family in the middle of the Great Depression, he struggles to overcome the indoctrination of inferiority and social ostracism resulting from his mother's alcoholism. The story traces the family history from his ancestors' 19th century Mississippi plantation to the early 1950s in segregated Birmingham, Alabama.

The fastest man in the West meets his match in this deliciously clever original tall tale. With his extra-long legs, Jackrabbit McCabe can outrun anything on the American frontier: horses, trains, and even twisters. So of course, everyone in the town of Windy Flats always counts on his speed when a message has to get out fast. Then something new comes to town: the telegraph, which can send Morse code messages with the speed of electricity. At first, no one believes the newfangled contraption can deliver a message quicker than Jackrabbit. . . . But in a race between man and machine, who will be left in the dust? An author's note includes information about the invention of the telegraph, a Morse code key, and a riddle written in Morse code for kids to transcribe. "A strikingly accomplished debut.... A terrific tall tale about the costs and opportunities of technology." —Publishers Weekly, Starred "Good, quick-moving fun. Kids may marvel that communication existed before the telephone and Internet." —Kirkus Reviews

Writer Tracy Nelson Maurer and illustrator El Primo Ramón present a lively picture book biography of Samuel Morse that highlights how he revolutionized modern technology. Back in the 1800s, information traveled slowly. Who would dream of instant messages? Samuel Morse, that's who! Who traveled to France, where the famous telegraph towers relayed 10,000 possible codes for messages depending on the signal arm positions—only if the weather was clear? Who imagined a system that would use electric pulses to instantly carry coded messages between two machines, rain or shine? Long before the first telephone, who changed communication forever? Samuel Morse, that's who! This dynamic and substantive biography celebrates an early technology pioneer.

The human brain, he argues, is a complex system that not only tells time, but

creates it; it constructs our sense of chronological movement and enables "mental time travel"—simulations of future and past events. These functions are essential not only to our daily lives but to the evolution of the human race: without the ability to anticipate the future, mankind would never have crafted tools or invented agriculture. This virtuosic work of popular science will lead you to a revelation as strange as it is true: your brain is, at its core, a time machine.

Air Support Division, and architects past and present, the book dissects the built environment from both sides of the law. In this brilliantly conceived and written biography, Pulitzer Prize-winning Kenneth Silverman gives us the long and amazing life of the man eulogized by the New York Herald in 1872 as "perhaps the most illustrious American of his age." Silverman presents Samuel Morse in all his complexity. There is the gifted and prolific painter (more than three hundred portraits and larger historical canvases) and pioneer photographer, who gave the first lectures on art in America, became the first Professor of Fine Arts at an American college (New York University), and founded the National Academy of Design. There is the republican idealist, prominent in antebellum politics, who ran for Congress and for mayor of New York. But most important, there is the inventor of the American electromagnetic telegraph, which earned Morse the name Lightning Man and brought him the fame he sought. In these pages, we witness the evolution of the great invention from its inception as an idea to its introduction to the world—an event that astonished Morse's contemporaries and was considered the supreme expression of the country's inventive genius. We see how it transformed commerce, journalism, transportation, military affairs, diplomacy, and the very shape of daily life, ushering in the modern era of communication. But we discover as well that Morse viewed his existence as accursed rather than illustrious, his every achievement seeming to end in loss and defeat: his most ambitious canvases went unsold; his beloved republic imploded into civil war, making it unlivable for him; and the commercial success of the telegraph engulfed him in lawsuits challenging the originality and ownership of his invention. Lightning Man is the first biography of Samuel F. B. Morse in sixty years. It is a revelation of the life of a fascinating and profoundly troubled American genius.
