**LINUX: Beginner's Crash Course** Jeremy Li,2017-03-24 LINUX: Beginner's Crash Course Your Step-By-Step Guide To Learning The Linux Operating System And Command Line Easy & Fast! Linux is the ruler of data centers. Ever since Linux burst on the operating system scene in the mid -90s, it has seen a steady increase in popularity. Though desktop users never really warmed up to it, its phenomenal success in the server market is the stuff of fairytales. Linus Torvalds could have never predicted that his brainchild would grow so big!There are many numbers of Linux flavors to choose from. Debian, Red Hat, Ubuntu, CentOS Fedora, SUSE, these are all very popular with large organizations as well as web-hosting services.Open source has come of age and has become all pervasive. More and more organizations are choosing the Linux route because of

the robust technology and also because licensing issues are minimum. From a security point of view, Linux is a better OS to use on a critical server, because it lets users fine tune how precisely it is set up. Unlike a Windows environment, which is riddled with big security holes by default, Linux provides a much more secure and hardened OS. With cloud-based infrastructure gaining ground everywhere, Linux dominance is here to stay. Any IT administrator worth his salt needs to have solid Linux skills to survive and grow today.

*Complete Step-By-Step Guide to Learning Linux for Beginners and More Advanced Us* Alvin Wells, 2018-04-15 Why use Linux? Does that operating system you're currently using really work just fine? Or are you constantly battling viruses, malware, slow downs, crashes, costly repairs, and licensing fees? If you struggle with the above, and want to free yourself from the constant fear of losing data or having to take your computer in for the yearly clean up, Linux might be the perfect platform for you. Linux has evolved into one of the most reliable computer ecosystems on the planet. Combine that reliability with zero cost of entry and you have the perfect solution for a desktop platform. That's right, zero cost of entry...as in free. You can install Linux on as many computers as you like without paying a cent for software or server licensing (including costly Microsoft Client Access License - CALs). If you're a system administrator, working with Linux is a dream come true. No more daily babysitting servers. In fact, Linux is as close to set it and forget it as you will ever find. And, on the off chance, one service on the server requires restarting, re-configuring, upgrading, etc...most likely the rest of the server won't be affected. Linux is also distributed under an open source license. Open source follows the following key philosophies: The freedom to run the program, for any purpose. The freedom to study how the program works, and change it to make it do what you wish. The freedom to redistribute copies so you can help your neighbor. The freedom to distribute copies of your modified versions to others.
