A student book for Office 2003 that provides support for the ECDL Syllabus 5.0.

History of Computing: Learning from the Past Why is the history of computing important? Given that the computer, as we now know it, came into existence less than 70 years ago it might seem a little odd to some people that we are concerned with its history. Isn't history about 'old things'? Computing, of course, goes back much further than 70 years with many earlier - vices rightly being known as computers, and their history is, of course, important. It is only the history of electronic digital computers that is relatively recent. History is often justified by use of a quote from George Santayana who famously said that: 'Those who cannot remember the past are condemned to repeat it'. It is arguable whether there are particular mistakes in the history of computing that we should avoid in the future, but there is some circularity in this question, as the only way we will know the answer to this is to study our history. This book contains papers on a wide range of topics relating to the history of computing, written both by historians and also by those who were involved in creating this history. The papers are the result of an international conference on the History of Computing that was held as a part of the IFIP World Computer Congress in Brisbane in September 2010.

Fully accredited content, clever design and student features make this ECDL EXAM SUCCESS PACK the easiest way of passing the ECDL. The pack contains: (1) How To Pass ECDL4 for Office 2000 - an engaging, student friendly textbook, ideal to accompany any ECDL course. Includes FREE 4-colour cut-out-and-keep summary module guides at the back - ideal for study and revision.
