Beautiful, destitute, and desperate she is looking to get out any way she can. She has worked her whole life as a laundress with no hope of escaping her fate anytime soon. But then her life changes when a strange woman appears with the key to Ciardis's escape. With an offer to take her to the capital and a life she'd never dreamed of, it's hard to resist. There's only one catch. She wants Ciardis to become a companion: she'll be required to wear expensive dresses, learn to conduct suitable magic, educate herself on court proclivities, and - in the end - chain herself to the highest bidder. A Patron for life. Ciardis knows that this is her one opportunity to change her life. But what she does not know is that she will soon be at the heart of intrigues and power struggles, and that her new life in luxury demands a high price, perhaps even the life of a prince. Spectroscopy is the study of electromagnetic radiation and its interaction with solid, liquid, gas and plasma. It is one of the widely used analytical techniques to study the structure of atoms and molecules. The technique is also employed to obtain information about atoms and molecules as a result of their distinctive spectra. The fast-spreading field of spectroscopic applications has made a noteworthy influence on many disciplines, including energy research, chemical processing, environmental protection and medicine. This book aims to introduce students to the topic of spectroscopy. The author has avoided the mathematical aspects of the subject as far as possible; they appear in the text only when inevitable. Including topics such as time-dependent perturbation theory, laser action and applications of Group Theory in interpretation of spectra, the book offers a detailed coverage of the basic concepts and applications of spectroscopy.

horrid. Sure, there were warning signs, but those who "cried wolf" were dismissed by the mainstream as kooks and religious fanatics. In the blink of an eye, the world deteriorated into a living nightmare.... Excerpt: It was hot inside the wreckage, so very hot. Beads of sweat ran into Jim's eyes, stinging them. Or is that smoke burning my eyes? He could feel his pulse pounding in his temples, like the steady beat of a rock and roll song. Jim Tanker opened his eyes for the first time since the impact. Had he been sitting there for three minutes or three hours? He didn't know. The stench of gasoline, diesel, and exhaust fumes permeated the air around him. The first thing that struck him as odd was that there were no police, ambulance personnel or tow trucks. Everything was dead quiet, except for constant, mind numbing blare of radio static. Things were surreal, as if he had been in a drug induced haze. His back was stiff, his head was aching and most of all, his heart was aching, or was it broken? I must be going crazy. What I saw just didn't happen, couldn't happen. It's impossible. But Tanker saw what he saw, and felt what he felt and heard what he heard; that much was for sure. Had he been drugged? He certainly was not drunk at three in the afternoon on Easter Sunday. And even if he was, alcohol never made him hallucinate in the past. Although still in a state of shock, he recalled everything vividly. Every detail was crystal clear. He was starting to doubt his own sanity. He ran through the scenario in his mind's eye over and over again, and felt as if he were being badgered by an overly zealous insurance adjuster. These things just don't happen. But there he was, sitting in the driver's seat of his wife's Ford F-150 in the middle of Interstate 45 in the biggest pile up he had ever seen. Probably the biggest pile up that had ever taken place. Where is my family?

The first-ever original graphic novel spawning out of Tyson Hesse's Diesel, Hesse's popular "punk motif"-inspired, coming-of-age story about Diandra "Dee" Diesel, her mysterious flying engine, and the airship colony she lives on, Peacetowne. When a long-lost army suddenly appears from beneath the clouds, one impulsive decision made by Dee will change her destiny forever. With only her broken-down robot companion and a mysterious flying engine to help her, Dee is sent on a sky-bound journey that will take her from the darkest wastelands below the clouds to the brightest capital of her world. Her greatest challenge will be to look beyond her family legacy and create a destiny of her own choosing. Tyson Hesse's (Amazing World of Gumball, Bravest Warriors) visually stunning graphic novel examines the importance of family, responsibility, and heroism, all set in a grand, new world! Includes the first 4 issues of Tyson Hesse's Diesel comic series, as well as over 80 pages of new, original content.

Although Minecraft provides something for everyone, what it does not come with are directions, rules, or explanations telling you what the different items and blocks in the game are and what to do with them. The amount of information in the game can be overwhelming, and it can be difficult to know where to begin. The good news is, you don't need to know everything to start playing. Only the basics. So this mini-encyclopedia looks at some of the basic facets of the game, from common blocks and crafting recipes to enchantments and potions and transportation.

In recent years, the study of the plant cell cycle has become of major interest, not only to scientists working on cell division *sensu strictu*, but also to scientists dealing with plant hormones, development and environmental effects on growth. The book *The Plant Cell Cycle* is a very timely contribution to this exploding field. Outstanding contributors reviewed, not only knowledge on the most important classes of cell cycle regulators, but also summarized the various processes in which cell cycle control plays a pivotal role. The central role of the cell cycle makes this book an absolute must for plant molecular biologists.

A mentally fragile woman desperately seeks a resolution to her inner turmoil in Tina Snyder's intense psychological thriller, *The Pierce of Shadows*. Trish Murphy is hanging by a thread, suffering from debilitating depression while still trying to pursue a master's degree in psychology and make her marriage to Clark work. When her father dies, however, Trish is paralyzed with despair and her relationship with her husband finally begins to buckle under the pressure. At the urging of her husband, she finally decides to seek professional help under the watchful eye of psychiatrist Dr. Kyle Lindsay. Trish slowly seems to be making her way down the path of recovery when Clark is found shot. Suspicion instantly falls on Trish as people wonder whether her constant mental struggles have finally pushed her over the edge, causing her to do the unthinkable. She is placed in a mental institution under the supervision of Dr. Leslie Banks, a psychologist who is searching for answers of her own. Trish slowly learns to trust the ambitious Dr. Banks. As both women attempt to seek answers, they must untangle the web of lies they have found themselves trapped in. Can these two women discover the strength and courage within themselves to overcome their fears? Their very lives may depend on just that. Fans of suspense will welcome this new edition to the genre as they follow the emotional journey of Trish Murphy. Learning to find the strength within her to conquer all obstacles, even those she creates herself, ultimately opens up a world where love truly can overcome anything. While the lies swirl around her, Trish will finally learn the difference between the hard truth and the beautiful lie.

If Ernest Hemingway were to write about ecology and nature, he would have written like Krishnan. - The Indian Express Of Birds and Bird song is a masterpiece of great nature writing, natural history and wit at its best, by one of Indias greatest naturalists ever. A must read for anybody who is a nature enthusiast or who simply loves prose and is surely a collectors delight! - The Hindu You should read this book if you know nothing about birds and equally, if you marvel at them or enjoy watching them and listening to their calls. - Outlook India is home to over a thousand species of birds ranging from glittering sun-birds, peacocks and pheasants through to unassuming inhabitants of town and countryside like crows, sparrows and pigeons to those that are rare and threatened like the Indian Bustard. In this book, many of them are brought to vivid life by one of the countrys greatest naturalists and nature writers. M. Krishnans prose is studded with evocative descriptions of nature, literary allusions, stylistic flourishes, humor and most rewardingly, precise observations and original insights into over a hundred species of birds in a variety of habitats. This is a work that will delight bird lovers of every stripe. As Zafar Futehally, one of the countrys best known ornithologists, says in his forward, every piece in this collection has something even for the seasoned naturalist and even his description of common events holds your interest because of the writing.

A geographic information system (GIS) is a system designed to capture, store, manipulate, analyze, manage, and present all types of spatial or geographical data. The acronym GIS is sometimes used for geographical information science or geospatial information studies to refer to the academic discipline or career of working with geographic information systems and is a large domain within the broader academic discipline of Geoinformatics. What goes beyond a GIS is a spatial data infrastructure, a concept that has no such restrictive boundaries. In a general sense, the term describes any information system that integrates, stores, edits, analyzes, shares, and displays geographic information. GIS applications are tools that allow users to create interactive queries (user-created searches), analyze spatial information, edit data in maps, and present the results of all these operations. Geographic information science is the science underlying geographic concepts, applications, and systems.

Forty-six. That's how many hybrids survived the Hunter attack in the woods after I revived them with an injection of my blood. That's how many followed me home to Frederick Falls. And that's how many were now mentally linked to me through a blood bond. Two days. Three valium. Fourteen hours of sleep. That's what it took to realize I wasn't losing my mind as a result of the noise in my own head. Sixteen. That's how many days have passed since I almost killed Alex. That's how many days I've sat by his bedside, waiting for him to wake up. To ease the guilt, to understand his betrayal, to remember the exact shade of brown in his eyes. Zero. This fascinating book will be of as much interest to engineers as to art historians, examining as it does the evolution of machine design methodology from the Renaissance to the Age of Machines in the 19th century. It provides detailed analysis, comparing design concepts of engineers of the 15th century Renaissance and the 19th century age of machines from a workshop tradition to the rational scientific discipline used today.

"Documents the major breakthroughs in science from ancient times to the present with emphasis on the modern era."--Thomson Gale description.

Andre Rival, at home in both Paris and Berlin, has created a fascinating project out of a relatively simple idea: 100 women taking photographs of themselves. The outcome is both startling and impressive. It is an expression of contemporary female identity - self-aware, distinctive and thoroughly positive, in a series of nude photographs that inexorably capture and hold our attention, revealing at the same time the artist's highly creative approach to the medium of photography and to the individual selves of the women portrayed. The author describes his project in this way: "We are inundated with pictures of women in the media. Ordinarily, the pictures we see seek to achieve a kind of 'sameness' based on unwritten ideals of beauty; physical perfection, total fitness become the determining factors. These images of women, provoked as they are by the media industry, awakened in me the urge to confront both that industry and myself with something else. I chose to set aside my own ways of thinking and do a series of 100 women in which it was not I who would put together the photographs, but the women themselves. For this purpose, I gave them each a shutter-switch and left the room. That represented the beginning of the attempt to enable the women to become photographic subjects rather than objects; they were left to decide on their own which personal image of themselves they wanted to convey. The conditions were the same for all of the women: the same lighting, the same white background and the same unchanged camera position. It was essential to fix the location of the camera, so that the women did not perceive themselves as being pursued by an 'observer'; instead, they were able to establish distance and camera angle themselves with the aid of a video screen that showed them each camera exposure as a still photo."

Mitosis/Cytokinesis provides a comprehensive discussion of the various aspects of mitosis and cytokinesis, as studied from different points of view by various authors. The book summarizes work at different levels of organization, including phenomenological, molecular, genetic, and structural levels. The book is divided into three sections that cover the premeiotic and premitotic events; mitotic mechanisms and approaches to the study of mitosis; and mechanisms of cytokinesis. The authors used a uniform style in presenting the concepts by including an overview of the field, a main theme, and a conclusion so that a broad range of biologists could understand the concepts. This volume also explores the potential developments in the study of mitosis and cytokinesis, providing a background and perspective into research on mitosis and cytokinesis that will be invaluable to scientists and advanced students in cell biology. The book is an

excellent reference for students, lecturers, and research professionals in cell biology, molecular biology, developmental biology, genetics, biochemistry, and physiology.

The Indus region, comprising the northwestern part of the Indian subcontinent (now Pakistan), has always had its distinct identity - racially, ethnically, linguistically and culturally. In the last five thousand years, this region has been a part of India, politically, for only five hundred years. Pakistan, then, is no 'artificial' state conjured up by the disaffected Muslim elite of British India. Aitzaz Ahsan surveys the history of Indus - as he refers to this region - right from the time of the Harappan civilization to the era of the British Raj, concluding with independence and the creation of Pakistan. Ahsan's message is aimed both at Indians still nostalgic about 'undivided' India and their Pakistani compatriots who narrowly tend to define their identity by their 'un-Indianness'.

Research in science education is now an international activity. This book asks for the first time, Does this research activity have an identity? -It uses the significant studies of more than 75 researchers in 15 countries to see to what extent they provide evidence for an identity as a distinctive field of research. -It considers trends in the research over time, and looks particularly at what progression in the research entails. -It provides insight into how researchers influence each other and how involvement in research affects the being of the researcher as a person. -It addresses the relation between research and practice in a manner that sees teaching and learning in the science classroom as interdependent with national policies and curriculum traditions about science. It gives graduate students and other early researchers an unusual overview of their research area as a whole. Established researchers will be interested in, and challenged by, the identity the author ascribes to the research and by the plea he makes for the science content itself to be seen as
