"This highly engaging landmark work, a natural history of exercise--by the author of the best seller *The Story of the Human Body*--seeks to answer a fundamental question: were you born to run or rest? The first three parts of *Exercised* roughly follow the evolutionary story of human physical activity and inactivity, even as each chapter shatters a particular myth about exercise. Because we cannot understand physical activity without understanding its absence, Part One begins with physical inactivity. What are our bodies doing when we take it easy, including when we sit or sleep? Part Two explores physical activities that require speed, strength, and power, such as sprinting, lifting, and fighting. Part Three surveys physical activities that involve endurance, such as walking, running, or dancing, as well as their effect on aging. Part Four considers how anthropological and evolutionary approaches can help us exercise better in the modern world. How can we more effectively manage to exercise, and in what ways? To what extent, how, and why do different types and durations of exercise help prevent or treat the major diseases that are likely to make us sick and kill us?"--

From a late-night snack to a cold beer, there's nothing that whets the appetite quite like the suctioning sound of a refrigerator being opened. In the early 1930s fewer than ten percent of US households had a mechanical refrigerator, but today they are nearly universal, the primary means by which we keep our food and drink fresh. Yet, for as ubiquitous as refrigerators are, most of us take them for granted, letting them blend into the background of our kitchens, basements, garages, and all the other places where they seem so perfectly convenient. In this book, Helen Peavitt amplifies the hum of the refrigerator in technological history, showing us just how it became such an essential appliance. Peavitt takes us to the early closets, cabinets, and boxes into which we first started packing ice and the various things we were trying to keep cool. From there she charts the development of mechanical and chemical technologies that have led to modern-day refrigeration on both industrial and domestic scales, showing how these technologies have created a completely new method of preserving and transporting perishable goods, having a profound impact on society from the nineteenth century and on. She explores the ways the marketing of

refrigerators have expressed and influenced our notions of domestic life, and she looks at how refrigeration has altered the agriculture and food industries as well as our own appetites. Strikingly illustrated, this book offers an informative and entertaining history of an object that has radically changed—in a little over one hundred years—one of the most important things we do: eat.

Black business activity has been sustained in America for almost four centuries. From the marketing and trading activities of African slaves in Colonial America to the rise of 20th-century black corporate America, African American participation in self-employed economic activities has been a persistent theme in the black experience. Yet, unlike other topics in African American history, the study of black business has been limited. General reference

sources on the black experience--with their emphasis on social, cultural, and political life--provide little information on topics related to the history of black business. This invaluable encyclopedia is the only reference source providing information on the broad range of topics that illuminate black business history. Providing readily accessible information on the black business experience, the encyclopedia provides an overview of black business activities, and underscores the existence of a historic tradition of black American business participation. Entries range from biographies of black business people to overview surveys of business activities from the 1600s to the 1990s, including slave and free black business activities and the Black Wallstreet to coverage of black women's business activities, and discussions of such African American specific industries as catering, funeral enterprises, insurance, and hair care and cosmetic products. Also, there are entries on blacks in the automotive parts industry, black investment banks, black companies listed on the stock market, blacks and corporate America, civil rights and black business, and black athletes and business activities.
