Museums are public places where objects, images and memories are kept and shared. They exist in infinite variety and contradiction. They can be places of great excitement and great boredom, sharply insightful and hopelessly bland. Museums are anything that the political climate and the imagination allows them to be. No two museums are the same. The papers which make up this volume give ample evidence of the variety of views that exist about museums. They also demonstrate that museums and museum professionals are moving forward with energy and conviction. This volume will be invaluable to students and museum professionals and will provoke them to consider museum provision and professionalism in all their forms.

As one of the pioneers and leading advocates of neoliberalism, Britain, and in particular England, has radically transformed its higher education system over the last decades. Universities have increasingly been required to act like businesses, and students are frequently referred to as customers nowadays. Higher Education and the Student investigates precisely this relation between the changing function of higher education and what we consider the term 'student' to stand for. Based on a detailed analysis of government papers, reports, and speeches as well as publications by academics and students, the book explores how the student has been conceptualised within the debate on higher education from the birth of the British welfare state in the 1940s until today. It thus offers a novel assessment of the history of higher education and shows how closely the concept of the student and the way we comprehend higher education are intertwined. Higher Education and the Student opens up a new perspective that can critically inform public debate and future policy – in Britain and beyond. The book should be of great interest to scholars, researchers, and postgraduate students in the fields of higher education; educational policy and politics; and the philosophy, sociology, and history of higher education.

The global economic crisis has required governments across the globe to reconsider their spending priorities. It is within this demanding economic context that higher education systems have been steadily restructured with in many ways the English model in the vanguard of change. This book focuses in particular upon the policy of removing almost entirely public support for the payment of student fees. This has emerged from a steady process of change, which has broad political support and is underwritten by the idea that higher education is now seen more as a private than a public, good. As this shift has occurred (not a new innovation but rather a return to what once prevailed as more of a market in English higher education) so the relationship between government and the higher education has evolved with the latter now attempting to steer the development of the system through a state-regulated market. The book has a strong comparative dimension that draws upon US higher education to illustrate both the possible advantages and potential hazards to the marketization strategy. It concludes that any such strategy needs to be accompanied by state regulation if it is to function effectively, particularly to stimulate price competition, encourage innovation from new entrants, and provide consumer protection for students paying high fees.

"Every Mike Shattock book on higher education is worth keeping and re-reading. Making Policy in British Higher Education 1945-2011 is a great story, very readable and full of wry humour. It is also a profoundly informative work that explains the policy and politics of higher education better than anything else that is available." Professor Simon Marginson, Centre for the Study of Higher Education, University of Melbourne, Australia "As expected, Michael

Shattock's mastery of the history of higher education policy-making in the UK is evident in every page - the temptation is to say every paragraph. This is a demanding analysis. It is packed, precise, judicious and immensely informed ... As a narrative about how policy-making occurs in the long run, how to read the relevant archival and other documents closely and how to avoid the easy generalizations arising from ideological partis pris, this study is an instant classic." Sheldon Rothblatt, Professor of History Emeritus, University of California, Berkeley, USA "In the last 30 years Britain has experimented with some of the most innovative higher education policies including academic quality assurance, research assessment, income contingent loan financing, tuition policy, information for students, and other efforts to stimulate competitive market forces. In this highly enlightening, meticulously researched, and fascinating history, university administrator and scholar Michael Shattock examines the individuals and financial policy drivers that have shaped British higher education from World War II to the present day and explores the impacts of these policies on the university sector." David D. Dill, Professor Emeritus of Public Policy, University of North Carolina at Chapel Hill, USA "Michael Shattock's important new book could not be better timed. He offers a detailed, nuanced and (above all) intelligent account of policy making in British higher education over the past 60 years ... This book reminds us that novelty is more often in the eye of the beholder than the historical record. It also warns us that those who have forgotten past events are often fated to relive them - and that second (or third) time round is rarely an improvement." Peter Scott, Professor of Higher Education Studies, Institute of Education University of London, UK This book aims to provide an authoritative account of the evolution of policy in British higher education drawing extensively on previously untapped archival sources. It offers a comprehensive analysis of the policy drivers since 1945 and up to 2011 and of the extent to which even in the so called golden age of university autonomy in the immediate post War period the development of British higher education policy was closely integrated with government policies. In particular, it highlights how the role of the Treasury in determining the resource base for the expansion of student numbers is key to understanding many of the shifts in policy that occurred. This close engagement with government coupled with the historical acceptance of institutional autonomy defines the distinctiveness of the British higher education system as compared with other countries. What the book also shows, however, is that policy was rarely driven directly by Ministers but emerged out of inter relationships between the Treasury, the responsible Department, the intermediary bodies, the higher education representative bodies and the research communities. The policy process was interactive rather than directed. The conclusions offer a new interpretation of the development of British higher education.

The book is grouped under five main sub-themes as: Theme 1: Planning Development and Management of Digital Libraries; Theme 2: Collection Development in Digital Environment; Theme 3: Resource Sharing and Networking; Theme 4: New Technologies and Adaptability; Theme 5: Change Management Issues and Strategies.

India is in the throes of great developments in the field of higher education. This book identifies the needs and gaps in this sector and provides suggestions for improvement based on the lessons learnt from the experiences of other countries. It facilitates a clear and holistic understanding of the sector's complex nature and breaks several myths related to it. The availability of quality higher education in India, though increasing, is unable to meet the demands of a growing youth population, improvements in school education and a growing middle class. At the same time, it has been widely recognised that the country has a unique opportunity to convert its demographic surplus into its economic strength by providing its young people the right kind of skills. Following this understanding, and due to the persisting problems in the sector, higher education now occupies a central position in the country's strategy for global competitiveness and inclusive growth, and several steps have been taken for its improvement. Apart from an analysis of the prevailing situation, the author also suggests a framework for the creation of a competitive environment in higher education that would ensure better utilisation of public funds and improvement of both public and private institutions. This book will be a valuable resource for centres of education and higher education in universities and research organisations, as well as think-tanks. It would also be a useful tool for consultants and private organisations working in the higher education sector.

In Indian context.

This book draws out and examines the trends in education and research in the field of library and information science (LIS) in the vast Asia-Oceania region. Information is an important part of the human condition and critical to the development of the Asia-Oceania region. The book is timely, therefore, as the region continues to grow and develop. Higher education is vital to India's future, creating democratic citizens and a modern economy, building communities and cities and conducting research the country needs to continue its advance. Yet, with two thirds of people of India living in rural areas and urban incomes below the world average, in a culturally diverse country, the tragic effects of the Covid-19 pandemic and profound problems of regional, social and gender inequalities, higher education faces many challenges. This book brings together experts and emerging researchers from India and the UK to discuss these issues and to explore positive solutions. The team shine the spotlight on financing and funding, governance and regulation, sector organisation and institutional classification, equity and social inclusion, the large and poorly regulated private sector, Union-State relations in higher education, student political activism, and internationalisation.

The ambiguous state of our legal structure and its formats leave the common man with no grasp of the basics of the system in which he lives. Treatises and documents are boundless, but yet so vague and so verbose, that one has neither the time to read it nor to even glance it. Over the years it is greatly felt that a standing reference material which can help abank worker to be aware of this rights as bank employee is necessary. Hence this effort on the part of mine to give you a summary of your rights as a bank employee edited from the available sources. This document is exhaustive and gives the most correct picture of our rights... This book is for all. The objectives of this book are to enable activists to understand important concepts in domestic enquiries, with practical illustrations and to get insightful understanding of changing environment of service conditions followed in banks and other sectors. it is hoped that books will be useful and will be a

tool for effective defence assistant in days to come. Every line present day's employees in banks are now referring as a service condition and benefits has got an historical struggle and historical negotiation. Remember, the task of the union to shape your life, career and future was never an easy way or path. These benefits are hard earned rights in tough times. Now you hold the responsibility to preserve, protect, and improve them. Let thousand hands join and build our movement strong. Success is not a destination but it is a journey.

This book provides an insight into ways of inculcating the need for applying mobile edge data analytics in bioinformatics and medicine. The book is a comprehensive reference that provides an overview of the current state of medical treatments and systems and offers emerging solutions for a more personalized approach to the healthcare field. Topics include deep learning methods for applications in object detection and identification, object tracking, human action recognition, and cross-modal and multimodal data analysis. High performance computing systems for applications in healthcare are also discussed. The contributors also include information on microarray data analysis, sequence analysis, genomics based analytics, disease network analysis, and techniques for big data Analytics and health information technology.

The book analyses various challenges emanating from privatization, globalization and public financial crunch to understand the future directions of higher education in India. The book presents a careful understanding of structure, finance and governance of higher education and advocates a new way to look at increasing the capability of students to secure their future. Attention has also been drawn to the inequalities prevailing in the system of higher education and pursuing inclusive approach so as to have sufficient employment opportunities for students in the labour market. The book is divided into three parts. Part 1 deals with the future in terms of university structure and functions, Part 2 deals with the future of financing higher education and Part 3 deals with capabilities required by teachers for the future of universities. It is an interesting collection of various themes in different chapters which are authored by serious researchers. All policy makers, university administrators and teachers and researchers of higher education interested in governance, financing, teaching as well as research in the area of higher education will find the contents of the book relevant. The book will benefit in understanding the challenges of higher education and help remodel the future of higher education in India.

Excessive pollution has provoked the nature, and the nature starts behaving in unnatural ways (in form of global warming versus global cooling, heavy rains versus draught, and other natural calamities like frequent earthquakes and tsunami, cyclones, epidemics, and so forth). Economic growth via production and consumption threatens peaceful life of human beings on the earth. Environment-friendly eco-green marketing is an attempt to protect consumer welfare and environment (the nature) through production, consumption, and disposal of eco-friendly products. Basically, green marketing is concerned with three aspects: 1. promotion of production and consummation of pure/quality products, 2. fair and just dealing with customers and society, and 3. protection of ecological environment. Thus, green marketing is a marketing philosophy that promotes production and selling of pure (eco-friendly) products with protection of ecological balance. Green marketing involves multiple activities. Green marketing encourages production of pure products by pure technology, conservation of energy, preservation of environment, minimum use of natural resources, and more use of natural foods instead of processed foods. Efforts of people, social organizations, firms, and governments in this regard can be said as green marketing efforts. Green marketing raises the voice against production, consumption, and/or disposal of such products that harm consumers, the society, and the environment anyway. It is necessary that businessmen and users should refrain from harmful products.

With the emergence of global university rankings, there is increased interest in research universities. The focus of the higher education system in India has traditionally been on educating students and not on research. However, in the last decade or so, there has been a growing appreciation of research in universities and interest in transforming some of the Indian universities to globally competitive research universities. This is the first book that focuses on building research universities in India. It provides a comprehensive and holistic view of a research university and discusses the key dimensions of such a university, including education, research, PhD programme, faculty management, governance, financing and third mission. This book will be of interest to academicians, academic leaders, policymakers, and those who are involved in developing a university in India.

Why is it important to have a revolutionary critical pedagogy? What are the new inter/disciplinary engagements possible within the university? What will it be like to live and learn in this university of the future? Drawing on these essential questions, this volume explores the political future(s) of the university. It does not take a simplistic recourse to the tenets of liberal democracy but seeks a more engaged positioning of the university space within everyday practices of the social. It cross-examines the history of this 'ideal' university's relationship with the banal everyday, the 'apolitical' outside and what exceeds intellectual reason, to finally question if such historicizing of the university is necessary at all. Along with its companion *The Idea of the University: Histories and Contexts*, this brave new intervention makes a compelling foray into the political future(s) of the university. It will be of interest to academics, educators and students of the social sciences and humanities, especially education. It will also be of use to policy-makers and education analysts, and be central to the concerns of any citizen.

Education in India: Policy and Practice presents trends in shifting education policies in independent India and how the State, academia and civil society reacted to the changing priorities during the last 50 years. The 20 chapters, authored by eminent scholars and experts, provide valuable insights into complex policy issues at the grassroots as well as macro levels. The book discusses major challenges and concerns such as growth and inequalities, education of women, quality of higher education and research, and making policy reforms for the transformation of the system in such a way that it helps in broader social transformation. The issues analyzed have also been taken up in the editor's introductions, which provide a perspective on their wider social, political and economic implications in detail. This volume is an important reference tool for grappling with the challenges of the new National Education Policy 2020. The series 'Social Change in Contemporary India' brings together key texts published in the prestigious journal Social Change, from 1971 till present times. These writings, most of which are considered canonical, address important issues in health, education, poverty and agriculture with special focus on disadvantaged groups. These writings will help readers identify key points in the history of policymaking in India and major discourses and debates and their impact.

First comprehensive account of the seven-decade long journey of the Film Society Movement in India, and how it helped Indian cinema come into its own. Till 1950s, 80 % of the films screened in India were from Hollywood. Today, only 10 % films shown in India are of foreign origin. One of the main factors that aided in bringing about this massive transformation was the formation of Film Societies in India. They soon became a catalyst to a new film culture, impacting quality of Indian films, both in technology and content. This book studies this historic Film Society movement, from its origin, to the crisis of its identity in the 80s and 90s to its revival in 2000s. It not only narrates the history, the heroes, the institutions, crises, technological changes and the transformation of the Film Society Movement but also debates on the future of this movement.

Today, India's education sector remains a victim of poor policies, restrictive regulations and orthodoxy. Despite being enrolled in schools, children are not learning adequately. Increasingly, parents are seeking alternatives through private inputs in school and tuition. Students are dropping out from secondary school in spite of high financial returns of secondary education, and those who do complete it have inferior conceptual knowledge. Higher education is over-regulated and under-governed, keeping away serious private providers and reputed global institutes. Graduates from high schools, colleges and universities are not readily employable, and few are willing to pay for skill development. Ironically, the Right to Education Act, if strictly enforced, will result in closure of thousands of non-state schools, and millions of poor children will be left without access to education. Eleventh in the series, India Infrastructure Report 2012 discusses challenges in the education sector — elementary, secondary, higher, and vocational — and explores strategies for constructive change and opportunities for the private sector. It suggests that immediate steps are required to reform the sector to reap the benefits from India's 'demographic dividend' due to a rise in the working age population. Result of a collective effort led by the IDFC Foundation, this Report brings together a range of perspectives from academics, researchers and practitioners committed to enhancing educational practices. It will be an invaluable resource for policymakers, researchers and corporates.

The COVID-19 pandemic has affected every aspect of the modern world, and its impact is felt by all. The pandemic particularly has had a large impact on businesses as they were forced to close, supply chains were disrupted, and new health and safety precautions were adopted. As such, many businesses, especially small businesses, were faced with losses they could not afford. Governments and stakeholders across the world have thus needed to formulate various strategies and interventions to mitigate the negative consequences of the COVID-19 pandemic, particularly as they relate to small- and medium-sized enterprises (SMEs). The Handbook of Research on Strategies and Interventions to Mitigate COVID-19 Impact on SMEs is a comprehensive reference source that encapsulates the overall effect of COVID-19 on SMEs and a variety of strategies to overcome the negative effects and create more sustainable policies and organizations moving forward. The book offers a thorough overview of interventions and tactics to help organizations, entrepreneurs, and institutions of higher learning overcome the negative impact of COVID-19 while preparing policies for a more effective post-pandemic world. Covering topics that include sustainable practices for development, interventions to lessen the impact of COVID-19, and psychological resilience for SME employees, this book is Ideal for entrepreneurs, managers, executives, small businesses, family firms, academicians, scholar-practitioners, policymakers, researchers, and students.

India is not only the world's largest and fiercely independent democracy, but also an emerging economic giant. But to date there has been no comprehensive account of India's remarkable growth or the role policy has played in fueling this expansion. India: The Emerging Giant fills this gap, shedding light on one of the most successful experiments in economic development in modern history. Why did the early promise of the Indian economy not materialize and what led to its eventual turnaround? What policy initiatives have been undertaken in the last twenty years and how do they relate to the upward shift in the growth rate? What must be done to push the growth rate to double-digit levels? To answer these crucial questions, Arvind Panagariya offers a brilliant analysis of India's economy over the last fifty years—from the promising start in the 1950s, to the near debacle of the 1970s (when India came to be regarded as a "basket case"), to the phenomenal about face of the last two decades. The author illuminates the ways that government policies have promoted economic growth (or, in the case of Indira

Gandhi's policies, economic stagnation), and offers insightful discussions of such key topics as poverty and inequality, tax reform, telecommunications (perhaps the single most important success story), agriculture and transportation, and the government's role in health, education, and sanitation. The dramatic change in the fortunes of 1.1 billion people has, not surprisingly, generated tremendous interest in the economy of India. Arvind Panagariya offers the first major account of how this has come about and what more India must do to sustain its rapid growth and alleviate poverty. It will be must reading for everyone interested in modern India, foreign affairs, or the world economy. Management of higher education systems through the instrumentality of quasi-autonomous bodies like the U.G.C. It also attempts to examine critically the institutional structure and mechanisms through which interactions between Centre and State take place. Salient Features University management-Centre-State relations Landmarks in the development of educational policy, Modes of Central financing of higher education and its institutional framework Role of Planning Commission, Ministry of Education, University Grants of Education, Central Advisory Board of Education and Association of Indian Universities in Centre-State relations and College management and development in the context of Centre-State relations.

Sociologies in Dialogue brings together expert contributions from international scholars, who reflect on the importance of collaboration between diverse sociological perspectives to enhance our understanding of the role of sociology as an academic discipline, and as a vehicle for social change. By exploring the distinctive practices and research of a range of sociologists, the book shows how an open dialogue between sociologists is critical to addressing major sociological issues across the globe such as inequality and ethnocentrism, and challenging the hierarchies of knowledge production and circulation. Contributors also discuss novel strands in theory and methodology such as multicultural sociology, cosmopolitanism, and multiple modernities. An important contribution for researchers and students interested in global sociology, sociological theories and methodologies.
