This special volume of Progress in Molecular Biology and Translational Science provides a current overview of how memory is processed in the brain. A broad range of topics are presented by leaders in the field, ranging from brain circuitry to synaptic plasticity to the molecular machinery that contributes to the brain's ability to maintain information across time. Memory systems in the prefrontal cortex, hippocampus and amygdala are considered as well. In addition, the volume covers recent contributions to our understanding of memory from in vivo imaging, optogenetic, electrophysiological, biochemical and molecular biological studies. Articles from world renowned experts in memory Covering topics from signaling, epigenetic, RNA translation to plasticity Methodological approaches include molecular and cellular, behavioral, electrophysiological, optogenetic and functional imaging

First published in 1202, Fibonacci's Liber Abaci was one of the most important books on mathematics in the Middle Ages, introducing Arabic numerals and methods throughout Europe. This is the first translation into a modern European language, of interest not only to historians of science but also to all mathematicians and mathematics teachers interested in the origins of their methods.

Une collection totalement conforme à l'esprit des nouveaux programmes du cycle 4. Headed by the larger-than-life figure of Professor Challenger, a scientific expedition sets out to explore a plateau in South America that remains frozen in time from the days when dinosaurs roamed the Earth. Seemingly impossible to penetrate, this lost world holds great danger for the four men, whether from fiendish ape-men or terrifying prehistoric creatures. Arthur Conan Doyle's classic tale of adventure and discovery still excites the reader today just as dinosaurs continue to grip the popular imagination.

These books were written as consultation books to be used to solve problems. They are essentially analogous to medical books for individuals who decided to manage the concepts and fundamentals of things in order to manage the root causes of problems. Unicist Business Objects are adaptive systems that are designed to produce a predefined result in a process. By definition they deal with the adaptive aspects of businesses. There are five types of business objects which are: the drivers, the entropy inhibitors, the inhibitors, the catalysts and the gravitational objects.

The Latin course is written entirely in Latin. It consists of two parts: I: Familia Romana -- the fundamental or elementary course. II: Roma Aeterna -- the advanced course, with Indices covering both parts. The direct method is based on the inductive principle of learning. In the text every sentence is intelligible per se, or self-explanatory, because the meaning and function of all new words and grammatical forms are made clear by the context in which they occur, or if necessary, by illustrations or marginal notes using vocabulary already learned. This demands a carefully graded text, but in order to make learning efficient the content should stimulate interest and curiosity and make it easy for the reader to visualise the scenes and situations described. To meet these demands the chapters of Lingva Latina I form a continuous narrative, a sort of Latin novel, which captivates the students so that they look forward to reading the continuation of the story. While reading this story and learning facts about the Roman life and traditions, the students pick up the vocabulary and grammar that will enable them to go on, in Part II, to read a representative selection of Latin literature, both prose and poetry. Here, too, all new words and structures, if not immediately intelligible from the context, are explained by marginal notes or illustrations. In addition, factual information is given in the margin. Part I covers the essentials of Latin grammar and introduces a basic vocabulary of some 1600 words. The 35 chapters form a sequence of scenes and incidents from the life of a Roman family in the second century A.D. Each chapter is divided into 3 or 4 lessons (lectiones) and consists of several text pages followed by a section on grammar, three exercises, and a list of new words. At the end of the volume there is a survey of inflexions, a Roman calendar, and alphabetical word-list and a grammatical index.

The theory of composite materials is the study of partial differential equations with rapid

oscillations in their coefficients. Although extensively studied for more than a hundred years, an explosion of ideas in the past four decades has dramatically increased our understanding of the relationship among the properties of the constituent materials, the underlying microstructure of a composite, and the overall effective moduli that govern the macroscopic behavior. This renaissance has been fueled by the technological need for improving our knowledge base of composites, by the advance of the underlying mathematical theory of homogenization, by the discovery of new variational principles, by the recognition of how important the subject is to solving structural optimization problems, and by the realization of the connection with the mathematical problem of quasiconvexification. This book surveys these exciting developments at the frontier of mathematics and presents many new results.
