In the second wave of the HIV epidemic, those with the disease are more likely than ever to be female, younger, heterosexual, a racial minority, and rural-living. Vital to the development of user-friendly health care systems is an understanding of the vastly different lives of this second wave of HIV-infected persons. "You're the First One I've Told" offers a view into the lives of men and women infected with HIV. The experiences of twenty-five people living with this disease in rural eastern North Carolina serve as the foundation of this book, which also draws upon unique HIV/AIDS survey data collected by the authors and statistics from the Southeastern United States. This combination of qualitative and quantitative information provides readers with a vivid description of how people live with HIV/AIDS in the midst of their often traumatic lives, and why they manage their illness in ways that seem to contradict mainstream medical and social wisdom. The people interviewed represent a variety of races, genders, professions, family lives, and medical and social service access and utilization. This book is the first to address a history of racism, distrust of formalized medical systems, homophobia, trauma and their interplay with HIV treatment, particularly in the South. It is an indispensable read for students needing to understand health care for the disenfranchised, as well as any provider, policymaker, or researcher involved in HIV service provision.

Comprising the Theory, Therapeutical Application, Materia Medica, and a Complete Repertory of These Remedies.

Savett describes the elements of the human side of medicine, the non-technical part, based on more than 30 years of medical practice, teaching, advising, and mentoring medical students and undergraduates.

Doctors and patients alike trust the medical profession and its therapeutic powers; yet this trust has often been misplaced. Whether prescribing opium or thalidomide, aspirin or antidepressants, doctors have persistently failed to test their favourite ideas - often with catastrophic results. From revolutionary America to Nazi Germany and modern big-pharmaceuticals, this is the unexpected story of just how bad medicine has been, and of its remarkably recent effort to improve. It is the history of well-meaning doctors misled by intuition, of the startling human cost of their mistakes and of the exceptional individuals who have helped make things better. Alarming and optimistic, *Taking the Medicine* is essential reading for anyone interested in how and why to trust the pills they swallow.

Includes proceedings of the Association, papers read at the annual sessions, and list of current medical literature.

Gisele, born in prewar Silesia, then part of Germany, has to flee with her family to the West in January 1945 to escape the Russian invasion. She loves school, but following her father's premature death, is forced to complete an apprenticeship as a seamstress. At 18 she immigrates to Canada, ahead of her family, as a government sponsored domestic. Through sheer willpower and perseverance she completes high school and enters Premeds, then Medical School at the University of Toronto graduating in 1963. In this compelling, informative, as well as entertaining memoir she vividly describes her and her classmates journey through these six years of learning. She shares her professional experiences in what was then still much of a man's world. Her varied career gives her unique insights into many aspects of medicine and the medical profession. Concurrently she endeavours to fulfil her role as wife and mother. This is a story of determination, pioneering spirit and love, told with candour and a fine sense of humour. An inspiration.

Lafayette Baker served as a Union spy during the Civil War and eventually took over the Union Intelligence Service from Allan Pinkerton. Baker suspected Secretary of War Edwin Stanton of corruption and was demoted after tapping his telegraph wires. After Lincoln's assassination, he returned to Washington, D.C. and played a vital role in rounding up those involved in the assassination plot. He was relieved of his position again after he was accused by President Johnson of spying on him, a charge Baker confesses to in his *History of the United States Secret Service*, written as a response to his demotion. Baker passed away a year after publishing his book in 1868.

Introduces the importance of taking the right medicines and treating them with respect through the story of Jimmy, who thought medicines were magical and tried to cure his teddy bear, but learned about the different types when he got sick.

This book is designed to help minority students thrive personally and academically in medical school, to make a realistic assessment of their strengths and weaknesses, to successfully confront societal myths and stereotypes and to develop healthy strategies to meet academic, personal, and relationship needs. Carmen Webb, having assisted countless medical students with these issues, has assembled an outstanding cadre of insightful professionals for advice, each highly qualified and devoted to promoting medical student well-being.

Taking care and staying safe are very important lessons for children to learn. The *Looking After Me* series explores health issues in a fun and engaging narrative. Each book is brought to life by Mike Gordon's humorous artwork, and includes notes for adults and further information.

Hunters, medicine men, and missionaries continue to dominate images and narratives of the West, even though historians have recognized women's role as colonizer and colonized since the 1980s. Kristin Burnett helps to correct this imbalance by presenting colonial medicine as a gendered phenomenon. Although the imperial eye focused on medicine men, Aboriginal women in the Treaty 7 region served as healers and caregivers – to their own people and to settler society – until the advent of settler-run hospitals and nursing stations. By revealing Aboriginal and settler women's contributions to health care, *Taking Medicine* challenges traditional understandings of colonial medicine in the contact zone.

For my part, I travel not to go anywhere, but to go. I travel for travel's sake. The great affair is to move. ~ Robert Louis Stevenson in *Travels with a Donkey* Few of us have the panache to put in our papers, free ourselves from our desks, and take off on a half-year-long trip along the coastal necklace of peninsular India. This richly-flavoured travelogue combines adventure, serendipity, food, and sheer joie de vivre. The narrative irresistibly draws us in as benevolent observers of the many facets and foibles of humanity. Living out of a backpack, in budget

lodgings, and eating bananas as a staple, only add to the heady challenges that stimulate the spirit of wanderlust of this maverick-explorer. The tour diary, starting from the remote north-western coastal tip and climaxing, rather precariously, way above sea-level at the potentially sinister Indo-Tibetan border, is an engrossing chronicle of discoveries about the desires, views, tribulations, joys, and sheer zest for living, of the teeming millions of India. Thrown in for good measure, in a refreshingly tongue-in-cheek style, are recipes for some of the gastronomic delights offered in the places traversed. Itinerant sidelights about people of all classes and creeds – fishermen, seafarers, rickshaw-drivers, priests, salesmen, radicals, typical and atypical families, and all the rest – create a colourful kalaidoscope that is quintessentially India. This book is as enjoyable and energising as a good cup of chai...
