The academy is in crisis. Students call for speakers to be banned, books to be slapped with trigger warnings and university to be a Safe Space, free of offensive words or upsetting ideas. But as tempting as it is to write off intolerant students as a generational blip, or a science experiment gone wrong, they've been getting their ideas from somewhere. Bringing together leading journalists, academics and agitators from the US and UK, Unsafe Space is a wake-up call. From the war on lad culture to the clampdown on climate sceptics, we need to resist all attempts to curtail free speech on campus. But society also needs to take a long, hard look at itself. Our inability to stick up for our founding, liberal values, to insist that the free exchange of ideas should always be a risky business, has eroded free speech from within.

Built from the ground up to focus on what matters to students in today's high-tech, globalized world, Dean Karlan and Jonathan Morduch's Macroeconomics represents a new generation of products, optimized for digital delivery and available with the best-in-class adaptive study resources in McGraw-Hill's LearnSmart Advantage Suite. Engagement with real-world problems is built into the very fabric of the learning materials as students are encouraged to think about economics in efficient, innovative, and

meaningful ways. Drawing on the authors' experiences as academic economists, teachers, and policy advisors, a familiar curriculum is combined with material from new research and applied areas such as finance, behavioral economics and the political economy, to share with students how what they're learning really matters. This modern approach is organized around learning objectives and matched with sound assessment tools aimed at enhancing students' analytical and critical thinking competencies. Students and faculty will find content that breaks down barriers between what goes on in the classroom and what is going on in our nation and broader world. By teaching the right questions to ask, Karlan and Morduch provide readers with a method for working through decisions they'll face in life and ultimately show that economics is the common thread that enables us to understand, analyze, and solve problems in our local communities and around the world.

The New York Times' bestselling manifesto about America's broken political system and how it got that way Mike Lofgren was once a proud Republican. When he came to Washington in the early 1980s, the party was controlled by what was mostly a rational group of people with a basic grasp of economics and foreign policy. So what happened since then? How did the party of Lincoln become the party of lunatics? After some thirty years in Congress, Lofgren, exasperated by the circus of the debt-ceiling debate, stepped down from his position on the Senate Budget Committee in disgust in 2011. Written by a refreshingly skeptical insider, *The Party Is Over* is an electrifying manifesto for the growing number of Americans who are appalled by our politicians and fed up with their pandering to corporate interests. Wry, trenchant, and highly persuasive, Lofgren offers clear suggestions for how to break through the gridlock and reverse political dysfunction in Washington.

Taking a fresh approach, they use the themes of optimization, equilibrium, and empiricism to not only illustrate the power of simple economic ideas, but also to explain and predict what's happening in today's society. Each chapter begins with an empirical question that is relevant to the life

of a reader, and is later answered using data in the Evidence-Based Economics feature. Deciding when and how to retire are among the most important decisions most people make. Can they be depended on to plan with foresight and make sound decisions? According to standard economic analysis the answer is a qualified "yes." But studies by psychologists, sociologists, and economists themselves raise doubts about this comforting appraisal. This volume by analysts trained in economics and other disciplines suggests that retirement planning and decisions fall far short of the rational ideal. Gary Burtless explains what economic research has to say about retirement behavior. Annamaria Lusardi reports that many people in their fifties and older say they have not even thought about retirement. Mathey Rabin and Ted O'Donoghue show that procrastination can cause huge economic losses. Robert Axtell and Joshua Epstein show that herd behavior explains observed patterns of retirement behavior better than does the assumption of rational decisionmaking. George Loewenstein, Drazen Prelec, and Roberto Weber report that many people incorrectly anticipate what retirement will

be like and rationalize whatever decision they have made. David Fetherstonhaugh and Lee Ross report experimental evidence that the effect of Social Security provisions may depend on how these policies are "framed" as well as on the specific content of those policies. These and other authors also explore the broader implications of these behavioral patterns. Copublished with Russell Sage Foundation
