Tired of having your creative process held up as you wait for your computer to "think" (i.e., render)? Wait no longer! Whether you're a broadcast pro, marketing specialist, or Web designer, if you work with video, you'll welcome the dramatically accelerated 2D and 3D rendering afforded by the brand-new After Effects 6.0 (\$699, Standard Edition; \$999, Professional Edition). Here to help you dive right into Adobe's motion-graphics and effects powerhouse is Adobe After Effects 6.0 Classroom in a Book. The team at Adobe has thoroughly revised the best-selling previous edition to cover all that's new in this upgrade. Designed around a single complex project that's broken down into manageable lessons, this book-and-CD package mimics a real-world workflow--but one you tackle at your own pace! The CD contains all the lesson files needed to complete the lessons.

School refusal affects up to 5% of children and is a complex and stressful issue for the child, their family and school. The more time a child is away from school, the more difficult it is for the child to resume normal school life. If school refusal becomes an ongoing issue it can negatively impact the child's social and educational development. Psychologist Joanne Garfi spends most of her working life assisting parents, teachers, school counsellors, caseworkers, and community policing officers on how best to deal with school refusal. Now her experiences and expertise are available in this easy-to-read practical book. Overcoming School Refusal helps readers understand this complex issue by explaining exactly what school refusal is and provides them with a range of strategies they can use to assist children in returning to school. Areas covered include: • types of school refusers • why children refuse to go to school • symptoms • short term and long term consequences • accurate assessment • treatment options • what parents can do • what schools can do • dealing with anxious high achievers • how to help children on the autism spectrum with school refusal

The proposed opening of a church parish school in Sinkino brings cause for Kunin - a well-to-do member of the Rural Board for the Borisovo district - to invite the local priest Father Yakov Smirnov, to his home. Finding Father Yakov completely disheveled and without any air of ecclesiastical presence, Kunin's impressions of the young priest aren't favourable. And a subsequent visit to the Father Yakov's own parish only deepens Kunin's despair. He feels that something should be done about the priest's torpid and unkempt manner, and that those in authority need to know about the situation.

Chekhov's short story "The Orator" tells of a rather embarrassing situation when a famous orator stands in front of a crowd at a funeral ceremony. Filled with satire towards and critique of the hypocritical and petty-minded people, Chekhov masterfully presents the world as a reflection in the eyes of a dead man. Connoisseur of the human psyche and a chronicler of Russian daily grind, the author's irony and sarcasm permeate every level of life, earning his short stories a place among the best in the field. A prolific writer of seven plays, a novel and hundreds of short stories, Anton Chekhov is considered one of the best practitioners of the short story genre in literature. True to life and painfully morbid with his miserable and realistic depictions of Russian everyday life, Chekhov's characters drift between humour, melancholy, artistic ambition, and death. Some of his best-known works include the plays "Uncle Vanya", "The Seagull", and "The Cherry Orchard", where Chekhov dramatizes and explores social and existential problems. His short stories unearth the mysterious beneath the ordinary situations, the failure and horror present in everyday life. Explains how to use the multimedia animation program to manage layer speed, transition, create templates, animate backgrounds, and import movies.

"This publication contains papers from the conference Communicating Process Architectures 2006 conference, held at Napier University in Edinburgh. It is perhaps appropriate that a meeting concerning simple ways of designing, implementing and reasoning about concurrent systems should be held in an institution named after the inventor of a simple, and highly concurrent, adding machine. The house in which John Napier lived forms part of the campus where the meeting was held. The papers are very varied and wide ranging and subjects include various aspects of communicating process theory and their application to designing and building systems. One of the hottest current topics safe and effective programming models for multicore processors (e.g. IBMs Cell) has a natural home in this community and is addressed. Other papers include a case study on large scale formal development and verification, CSP mechanisms for Microsofts .NET framework, parallel systems on embedded and mobile devices, modern link technology (SpaceWire), various applications of occam- , JCSP and JCSP.net (video processing, robotics, massive multiplayer gaming, material and biological modeling, etc.), visual design languages and tools for CSP and real-time systems, new process oriented programming and design environments, new developments of the Transterpreter, efficient cluster computing and the debugging of message-passing systems."

The only book you need to achieve the bathroom of your dreams - complete with information on remodeling your bathroom with an eye toward living safely and comfortably in your home as you age.

"Learn how to create, manipulate, and optimize motion graphics for film, video, DVD, and the web. In this series of lesson, you'll learn how to produce animations, dazzling effects, 3D layers - and much more! The book covers the basics of learning After Effects and provides countless tips and techniques to help you become more productive and adept using it. You can follow the book form start to finish, or choose only those lessons that interest you." -- back cover.

This volume surveys our current scientific understanding of the terrestrial aurora. It is organized into eleven reviews detailing theoretical and observational aspects of characteristic auroral morphologies, and how these in turn are organized according to local time, latitude, and activity level. Popular descriptions often attribute the aurora to the interaction of charged particles from the solar wind with atoms in the upper atmosphere. In fact, most auroras are not the result of direct entry of solar wind particles. Rather, as detailed in this volume, auroral particle acceleration and generation of auroral forms occur primarily within the magnetosphere. Importantly, many key aspects of the aurora –

most notably, the physical mechanisms responsible for the generation of discrete arcs – are still unexplained, and auroral physics continues to be an active area of scientific research. Each review chapter therefore includes a summary of open questions for further investigation. Providing the first comprehensive review of the terrestrial aurora in two decades, this book will aid both active researchers and newcomers interested in understanding the current state of the field.
