This collection of articles represents Professor Williamson Murray's efforts to elucidate the role that history should play in thinking about both the present and the future. They reflect three disparate themes in Professor Murray's work: his deep fascination with history and those who have acted in the past; his fascination with the similarities in human behavior between the past and the present; and his belief that the study of military and strategic history can be of real use to those who will confront the daunting problems of war and peace in the twenty-first century. The first group of essays addresses the relevance of history to an understanding of the present and to an understanding of the possibilities of the future. The second addresses the possible direct uses of history to think through the problems involved in the creation of effective military institutions. The final group represents historical case studies that serve to illuminate the present.

Though the revised edition of A Theory of Justice, published in 1999, is the definitive statement of Rawls's view, so much of the extensive literature on Rawls's theory refers to the first edition. This reissue makes the first edition once again available for scholars and serious students of Rawls's work.

First published in 1951, this masterful collection of essays explores the relationship between a society's communication media and that community's ability to maintain control over its development.

In the tradition of *A History of Reading*, this book is an account of Manguel's astonishment at the variety, beauty and persistence of our efforts to shape the world and our lives, most notably through something almost as old as reading itself: libraries. *The Library at Night* begins with the design and construction of Alberto Manguel's own library at his house in western France – a process that raises puzzling questions about his past and his reading habits, as well as broader ones about the nature of categories, catalogues, architecture and identity.

Thematically organized and beautifully illustrated, this book considers libraries as treasure troves and architectural spaces; it looks on them as autobiographies of their owners and as statements of national identity. It examines small personal libraries and libraries that started as philanthropic ventures, and analyzes the unending promise – and defects – of virtual ones. It compares different methods of categorization (and what they imply) and libraries that have built up by chance as opposed to by conscious direction. In part this is because this is about the library at night, not during the day: this book takes in what happens after the lights go out, when the world is sleeping, when books become the rightful owners of the library and the reader is the interloper. Then all daytime order is upended: one book calls to another across the shelves, and new alliances are created across time and space. And so, as well as the best design for a reading room and the makeup of Robinson Crusoe's library, this book dwells on more "nocturnal" subjects: fictional libraries like those carried by Count Dracula and Frankenstein's monster; shadow libraries of lost and censored books; imaginary libraries of books not yet written. *The Library at Night* is a fascinating voyage through the mind of one of our most beloved men of letters. It is an invitation into his memory and vast knowledge of books and civilizations, and throughout – though mostly implicitly – it is also a passionate defence of literacy, of the unique pleasures of reading, of the importance of the book. As much as anything else, *The Library at Night* reminds us of what a library stands for: the possibility of illumination, of a better path for our society and for us as individuals. That hope too, at the close, is replaced by something that fits this personal and eclectic book even better: something more fragile, and evanescent than illumination, though just as important.

China's rise to global economic and strategic eminence, with the potential for achieving pre-eminence in the greater-Asian region, is one of the defining characteristics of the post-Cold War period. For students contemplating a broad range of business, social science, journalist, or military science curricula, it is critical to possess a basic understanding of the military-strategic basis and trajectory of a Rising China. This work is intended to be attractive to a range of courses that require a volume that can provide background and outline current and future issues concerning China's rise in strategic-military influence.

"How did Singapore's health care system transform itself into one of the best in the world? It not only provides easy access, but its standards of health care, not only in curative medicine but also in prevention, are exemplary. Fifty years ago, the infant mortality rate (IMR) was 26 per thousand live births; today the IMR is 2. Life expectancy was 64 years then; today, it is 83. The Singapore Medicine brand is trusted internationally, and patients are drawn to Singapore from all over the world. And while many countries struggle to finance their health care, Singapore has developed a health care financing framework that makes health care affordable for its people and gives sustainability to the health care system. Reliability is provided by a professional workforce that seeks to continually learn, improve and become ever more proficient with cutting edge technology while emphasizing the relational aspects of health care by nurturing compassion and maintaining high standards of integrity. Convenience and safety are enhanced by a unifying IT system that enables the portability of medical records across health care institutions. All these have been achieved not by chance but by careful planning, strong leadership and dedicated people who are prepared to learn from Singapore's own experience while adapting best practices from around the world. But the system is not without challenges -- not least those of an aging population, and an increasing market influence. This book provides a fascinating insight into the development of Singapore's health care system from the early days of fighting infections and providing nutrition supplementation for school children, to today's management of lifestyle diseases and high-end tertiary care. It also discusses how the system must adapt to help Singaporeans continue to "live well, live long, and with peace of mind."--

Now in its fourth edition, *Communication and Human Behavior* continues to offer students a broad introduction to the study of communication which is expansive yet integrated, that links theory to practice, and that is rigorous yet readable. Neither a watered-down treatment of the subject nor a how-to text, this volume presumes that the study of communication in human affairs is a complex phenomenon with important and far-reaching effects. Employing a thorough description of a variety of approaches and using the cohering insights of systems theory, the text presents to students the broad and colorful landscape of the field, outlines the history of communication study, and focuses on communication as a basic life process. Further, it develops an awareness of verbal and nonverbal codes used in sending and receiving messages, and examines the role of media in multiple contexts of human life.

Interpretations of Koran and Hadith practiced in Indonesia.

Born during the Great Depression and World War Two (1929–1945) an entire generation has slipped between the cracks of history. These Lucky Few became the first American generation smaller than the one before them, and the luckiest generation of Americans ever. As children they experienced the most stable intact parental families in the nation's history. Lucky Few women married earlier than any other generation of the century and helped give birth to the Baby Boom, yet also gained in education compared to earlier generations. Lucky Few men made the greatest gains of the century in schooling, earned veterans benefits like the Greatest Generation but served mostly in peacetime with only a fraction of the casualties, came closest to full employment, and spearheaded the trend toward earlier retirement. Even in retirement/old age the Lucky Few remain in the right place at the right time. Here is their story, and the story of how they have affected other recent generations of Americans before and since.

This classic history of the Arab peoples is a work of great thoroughness and insight which contains much to satisfy general readers as well as scholars. Here is the story of the rise of Islam in the Middle Ages, its conquests, its empire, its time of greatness and of decay, unrolling one of the richest and most instructive panoramas in history. For this reissue of the tenth edition, Walid Khalidi gives a brief overview of the history and content of the book, and emphasises the vital importance of Philip K. Hitti's magisterial and scholarly work to on-going attempts to bridge the Arab/Western cultural divide.

More than a century ago, John Dewey challenged the education community to look to civic involvement for the betterment of both community and campus. Today, the challenge remains. In his landmark book, editor Thomas Ehrlich has collected essays from national leaders who have focused on civic responsibility and higher education. Imparting both philosophy and working examples, Ehrlich provides the inspiration for innovative new programs in this essential area of learning.

Enforcement of law related to sustainable development in Indonesia.

By the authors of the bestselling *13th Gen*, an incisive, in-depth examination of the Millennials--the generation born after 1982. In this remarkable account, certain to stir the interest of educators, counselors, parents, and people in all types of business as well as young people themselves, Neil Howe and William Strauss provide the definitive analysis of a powerful generation: the Millennials.

Having looked at oceans of data, taken their own polls, talked to hundreds of kids, parents, and teachers, and reflected on the rhythms of history, Howe and Strauss explain how Millennials have turned out to be so dramatically different from Xers and boomers. Millennials Rising provides a fascinating narrative of America's next great generation.

Media Economics: Applying Economics to New and Traditional Media differs from ordinary media economic texts by taking a conceptual approach to economic issues. As the book progresses through economic principles, authors Colin Hoskins, Stuart McFadyen, and Adam Finn use cases and examples to demonstrate how these principles can be used to analyze media issues and problems. Media Economics emphasizes economic concepts that have distinct application within media industries, including corporate media strategies and mergers, public policy within media industries, how industry structure and changing technologies affect the conduct and performance of media industries, and why the United States dominates trade in information and entertainment.

Introduction to Computer Law explains the law clearly and makes it accessible to a wide audience. In this fifth edition, the law within the key areas of intellectual property rights, contract, tort, criminal law and data protection has been comprehensively updated, expanded and rewritten to reflect technological change, new decisions and new European and UK legislation. The emphasis is on describing and examining the law in the context of the practicalities of computer use. Introduction to Computer Law is suitable for undergraduate and professional students taking modules in the subject, and will also be invaluable to managers, computer professionals and legal practitioners.

This book offers a detailed examination of the professional military education system in the United States, from a critical, insider's perspective. The mission of America's war colleges is to educate senior military officers in both the ways of war and the defence of peace. But are these colleges doing the best job possible in carrying out that important mission? Military education faces many demands, including a lack of preparation by the students, uneven quality of the faculty, and confusion over the curriculum. Many officers attend resident programs at the war colleges programs against the career advice of their leadership, despite the fact that they are virtually guaranteed graduation after less than a year of study, while others do their best to avoid it entirely. As the professional military education system has come under increasing scrutiny and criticism, some have even called for closing the war colleges. That answer, however, does not serve the United States well, especially in a complex, globalized environment, where military leaders need the best specialized education to prepare them for their future challenges. This volume examines the system that created and supports the perpetuation of this system, and why it is imperative that it be fixed. Written by a faculty member at a military college with twenty years' experience of the PME system, this book will of much interest to students of the US Military, US politics and military education in general.
