Intended for students, practitioners, policymakers, and academicians in personnel and industrial relations, this book presents findings of a 5-year study of joint union-management programs to improve productivity. Chapter 1 underscores the growth and importance of union-management cooperation and discusses union and management attitudes toward cooperation. Chapter 2 presents an overview of theories and discusses the models of change and cooperation in unionized settings employed to guide this research and the specific research issues treated. Chapter 3 details research design, measures of study variables, and analytical techniques employed; and summarizes characteristics of the 38 research sites and methodological findings. Chapter 4 describes structural characteristics of the six types of interventions studied: Scanlon, Rucker, and Improshare Plans; Labor-Management Committees; Quality Circles; and Quality of Worklife Programs. Chapter 5 deals with results of the process leading to cooperation and some of the conditions necessary to implement and maintain a cooperative program. Chapter 6 presents the results of the analysis of performance at the research sites. Some of the time-series data sets on these variables are as long as 8 years. Eleven case studies highlight significant issues involved in the practice of cooperative union-management relations. Chapter 7 summarizes research methodology and findings and offers a future research agenda. Findings, found in chapters 4-6 and summarized in chapter 7, indicate that: (1) the six interventions vary significantly in philosophy. (2) No intervention is a substitute for competent management, good union-management relations, or responsible union leadership. (3) Bonus formulas are an excellent means of equitably sharing organizational improvements. (4) The cooperative process requires neutrals and consulting expertise. (5) Unions have less confidence in the cooperative process than management. (6) Union-management cooperation can lead to significant improvements in productivity. (7) There is a need to study unsuccessful cases. In addition, through this research, seven areas for future research and investigation have been identified and are listed in the concluding pages. The book presents a mixed research method adopted to assess and present the Toyota Way practices within construction firms in general and for firms in China specifically. The results of an extensive structured questionnaire survey based on the Toyota Way-styled attributes identified were developed and data collected from building professionals working in construction firms is presented. The quantitative data presented in the book explains the status quo of the Toyota Way-styled practices implemented in the construction industry, as well as the extent to which these attributes were perceived for lean construction management. The book highlights all the actionable attributes derived from the Toyota Way model appreciated by the building professionals, but alerts the readers that some attributes felled short of implementation. Further findings from in-depth interviews and case studies are also presented in the book to provide to readers an understanding how these Toyota Way practices can be implemented in real-life projects. Collectively, all the empirical findings presented in this book can serve to enhance understanding of Toyota Way practices in the lean construction management context. The readers are then guided through to understand the gaps between actual practice and Toyota Way-styled practices, and the measures that they may undertake to circumvent the challenges for implementation. The book also presents to readers the SWOT analysis that addresses the strengths, weaknesses, opportunities and threats towards the implementation of the Toyota Way in the construction industry. The book prescribes the Toyota Way model for use in construction firms to strategically implement lean construction management. The checklist presented in the book enables readers to draw lessons that may be used additionally as a holistic assessment tool for measuring the maturity of firms with respect to their Toyota Way implementation. Consequent to this, management would then be in a better position to develop plans for Toyota Way implementation by focusing on weak areas, strengthening them, and thus increasing the likelihood of success in the implementation of the Toyota Way. In a nutshell, this book provides a comprehensive and valuable resource for firms not only in the construction industry but also businesses outside of the construction sector to better understand the Toyota Way and how this understanding can translate to implementation of lean construction/business management to enhance profitability and survivability in an increasingly competitive global market place.

Facilities Management (FM) and Corporate Real Estate Management (CREM) are two closely related and relatively new management disciplines with developing international professions and increasing academic attention. Both disciplines have from the outset a strong focus on controlling and reducing cost for real estate, facilities and related services. In recent years there has been a change towards putting more focus on how FM/CREM can add value to the organisation. This book is driven by the need to develop a widely accepted and easily applicable conceptual framework of adding value by FM and CREM. It presents the state of the art of theoretical knowledge and empirical evidence about the impact of buildings and facilities on 12 value parameters and how to manage and measure these values. The findings are connected to a new Value Adding Management model. The book is research based with a focus on guidance to practice. It offers a transdisciplinary approach, integrating academic knowledge from a variety of different fields with practical experience. It also includes 12 interviews with practitioners, shedding light as to how they manage adding value in practice.
