By far the biggest change to The UK Pesticide Guide in 2020 is the loss of a number of active ingredients that have been fundamental to many crop protection programmes. The final use-up of chlorothalonil formulations; propiconazole, fenpropimorph, chloridazon and diquat occurs in 2020 but there are also a few exciting new additions. Aclonifen is a new residual herbicide for use in potatoes that already has a number of EAMUs for use in minor crops. BASF is launching its new triazole, mefentrifluconazole, which promises to restore full triazole activity, at least initially. On the insecticide front the new active ingredient from Corteva agriscience, sulfoxaflor, is now listed for use in Cucurbitae and ornamentals under full protection for control of aphids and whitefly.

Despite acknowledgment that loss of living diversity is an international biological crisis, the ecological causes and

consequences of extinction have not yet been widely

addressed. In honor of Edward O. Wilson, winner of the

1993 International Prize for Biology, an international

group of distinguished biologists bring ecological,

evolutionary, and management perspectives to the issue of biodiversity. The roles of ecosystem processes,

community structure and population dynamics are

considered in this book. The goal, as Wilson writes in his

introduction, is "to assemble concepts that unite the

disciplines of systematics and ecology, and in so doing

to create a sound scientific basis for the future management of biodiversity."

VetSet2Go was a three-year project that ran from September 2015 through to August 2018. It aimed to explore what employability means in the veterinary context; develop an evidence-based, multi-stakeholder framework of the capabilities most important for employability and success in the veterinary profession; and create aligned assessment tools and resources to build these capabilities, in order to improve veterinary graduate employability, resilience in transition to practice, and professional satisfaction and success. Scoping reviews and research subprojects converged to inform a Delphi consensus process and an inaugural Veterinary Employability Forum held in February 2017. The project initiated a body of new research from multiple stakeholder perspectives, which was distilled to inform an evidence-based framework. The VetSet2Go framework consists of 18 capabilities within five broad, overlapping domains: psychological resources (for the self), effective relationships (for others), veterinary capabilities (for the task), professional commitment (for the mission) and self-awareness (for the central process).
