Palliative care has become increasingly important across the spectrum of healthcare, and with it, the need for education and training of a broad range of medical practitioners not previously associated with this field of care. Part of the Integrating Palliative Care series, this volume on surgical palliative care guides readers through the core palliative skills and knowledge needed to deliver high value care for patients with life-limiting, critical, and terminal illness under surgical care. Chapters explore the historical, philosophical, and spiritual principles of surgical palliative care, and follow the progression of the seriously ill surgical patient's journey from the pre-operative encounter, to the invasive procedure, to the post-operative setting, and on to survivorship. An overview of the future of surgical palliative care education and research rounds out the text. Surgical Palliative Care is an ideal resource for surgeons, surgical nurses, intensivists, and other practitioners who wish to learn more about integrating palliative care into the surgical field.

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was

created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

Just as children are not little adults, the discipline of paediatric surgery is not equivalent to surgery for adults. Differences in anatomy, diseases affecting children and the appropriate therapies make the surgical care of children confusing and tense. Even within paediatric care, the extensive changes children undergo as they develop from neonates to adolescents causes different care to be required at different stages. Full-size texts are available for comprehensive review of paediatric surgery when one has the luxury to sit and study at a desk, but no pocket-sized guide specific to paediatric surgery is available. This book will fulfil the need for rapid, clear, concise guidance in the immediate bedside evaluation and treatment of children suffering surgical disease. It will provide assistance to surgical and paediatric providers alike; anyone who has a hand in the urgent care of children requiring a surgeon. The book is also a convenient focused board review guide for trainees and active practitioners taking board examinations. The editors are busy paediatric surgeons at a teaching hospital, performing operations on children every day, as well as training students and residents. The contributors are drawn from the broad spectrum of paediatric specialists encompassing the disciplines necessary to staff a tertiary children's hospital.

Many patients who present to district (first-referral) level hospitals require surgical

treatment for trauma obstetric abdominal or orthopaedic emergencies. Often surgery cannot be safely postponed to allow their transfer to a secondary or tertiary-level hospital but many district hospitals in developing countries have no specialist surgical teams and are staffed by medical nursing and paramedical personnel who perform a wide range of surgical procedures often with inadequate training. the quality of surgical and acute care is often further constrained by poor facilities inadequate low-technology apparatus and limited supplies of drugs materials and other essentials. the mission of the team responsible for Clinical Procedures in the World Health Organization Department of Essential Health Technologies (EHT) is to promote the quality of clinical care through the identification promotion and standardization of appropriate procedures equipment and materials particularly at district hospital level. WHO/BCT has identified education and training as a particular priority especially for non-specialist practitioners who practise surgery and anaesthesia. It has therefore developed Surgical Care at the District Hospital as a practical resource for individual practitioners and for use in undergraduate and postgraduate programmes in-service training and continuing medical education programmes. the manual is a successor of three earlier publications that are widely used throughout the world and that remain important reference texts: General Surgery at the District Hospital (WHO 1988) Surgery at the District Hospital: Obstetrics Gynaecology Orthopaedics and Traumatology (WHO 1991) Anaesthesia at the District Hospital (WHO 1988; second edition 2000). This new manual draws together material from these three publications into a single volume which includes new and updated material as well as material from Managing Complications in Pregnancy and Childbirth: a Guide for Midwives and Doctors (WHO 2000). Link to the full training tool kit CD-ROM: WHO Integrated Management for Emergency and Essential Surgical Care (IMEESC) Toolkit CD-ROM Surgical Care at the District Hospital is a compact but comprehensive outline of modern surgical care focusing on fundamental precepts and practical techniques. the illustrations are clear instructive and appropriate. the authors are to be commended on a much improved new edition. This volume provides the first comprehensive review of the surgical anatomy of the groin in over 30 years. The text also provides a detailed review of considerations for all disciplines involved with the management of neoplasms potentially involving the inguinal lymph node basin as well as describing, in detail, the complications which can occur if one's understanding of these issues is limited. Epidemiology and the historical context in the evolution of our understanding of this anatomic area is covered along with lymphedema, one of the most concerning risks of groin surgery. Additionally, a thorough discussion of the management of all malignancies known to affect the inguinal region and quality of life is discussed. Malignancies of the Groin will be an invaluable text for any surgeon who operates on diseases of the skin, genitourinary tract, soft tissue or gynecologic tract. It will be an important adjunct for the radiation oncologist and the reconstructive surgeon and be equally useful for nurses, physicians assistants, nurse practitioners and other clinicians who care for patients undergoing treatment for malignancies involving the groin. The editors have compiled an international group of thought leaders in their respective disciplines to provide a broad ranging context for many of the issues that concern clinicians managing diseases affecting the inguinal region. This multidisciplinary array of authors will allow for cross-pollination of ideas from one field to another.
