Inhaltsangabe: Introduction: Most literature on marketing contains an exhaustive discussion on the topic of relationship marketing and this concept is now well understood by every marketer. However, valuing customer relationships is usually viewed more vaguely as being a general, desirable and virtuous factor. Like many fields in marketing, there has been a failure to justify adopting such an approach based also on its inherent financial control measures. In this increasingly globalised marketplace (the hospitality sector), it can strike as odd that scholars and researchers have overlooked the differences in CRM handling that exist among different cultures. The aim of this dissertation is to make a contribution to closing the gap between marketing and management perspectives in terms of customer profitability, especially in the luxury hotel sector with regard to their international customer/guest base. The gap is to identify by the management and accounting which customers are profitable and to translate these insights into marketing activities. Companies can control their customer relationships and make sophisticated decisions about which customer relationships should be finished and which are worth retaining, a practice known as Customer Equity. The objectives of this work include: - Identify how investment in customer retention create a Return on Investment. - Allocating marketing spending ratios for long-term profitability. - Identify the methods that managers can use to create customer loyalty. - Explain the links between customer loyalty, customer equity and relationship marketing. - Estimate the role of quality factors within service delivery and after-sales service as above and how they affect customer retention. - Identify the effect of after-sales service as above quality on customers expectations and its impact on customer satisfaction. CRM outline is seen by some as an extended database containing useful information about customers that could be used to help extend sales, while others see it as a tool specifically designed for use on a (one-to-one) basis with each of their customers (Peppers and Rogers, 1999). To implement CRM successfully the TQM, HRM and IT management need to ensure organisational alignment (Reinartz et al., 2004). Building on this statement, Buttle (2004) spells out that: CRM needs to be established in three layers: companywide, factional and customer facing . Understanding the global hotel business is not possible without paying specific attention to hotel chain management and dynamics. Chains are big business, approximately 80 percent of hotels currently being constructed around the world are chain affiliated and, in 2014, the five largest brands held over a one million rooms. The high economic importance of the hotel chains and their global presence justifies the academic research in the field however, despite this, there is no uniform coverage in the current body of literature. This Handbook aids in filling

the gap by exploring and critically evaluates the debates, issues and controversies of all aspects of hotel chains from their nature, fundamentals of existence and operation, expansion, strategic and operational aspects of their activities and geographical presence. It brings together leading specialists from range of disciplinary backgrounds and regions to provide state-of-the-art theoretical reflection and empirical research on current issues and future debates. Each of the five inter-related section explores and evaluates issues that are of extreme importance to hotel chain management, focusing on theoretical issues, the expansion of hotel chains, strategic and operational issues, the view point of the individual affiliated hotel and finally the current and future debates in the theory and practice of hotel chain management arising from globalisation, demographic trends, sustainability, and new technology development. It provides an invaluable resource for all those with an interest in hotel management, hospitality, tourism and business encouraging dialogue across disciplinary boundaries and areas of study. This is essential reading for students, researchers and academics of Hospitality as well as those of Tourism, Marketing, Business and Events Management.

While experiential staging is well documented in tourism studies, not enough has been written about the diverse types of experiences and expectations that visitors bring to the tourist space and how communities respond to, or indeed challenge, these expectations. This book brings together new ideas about cultural experiences and how communities, creative producers, and visitors can productively engage with competing interests and notions of experience and authenticity in the tourist environment. Part I considers the experiences of communities in meeting the needs of cultural tourists in an international context. Part II analyses the relationships between individual cultural tourists, the community, and digital technology. Finally, Part III responds to new methodologies in relation to interactions between government and regional policy and community development. Focusing on the way in which communities and visitors 'perform' new forms of cultural tourism, *Performing Cultural Tourism* is aimed at undergraduate students, researchers, academics, and a diverse range of professionals at both private and government levels that are seeking to develop policies and business plans that recognize and respond to new interests in contemporary tourism.

This book offers a comprehensive overview of the challenges that marketing faces in understanding, managing and measuring the dynamics of modern consumer behaviours and successfully managing the customer experience. The reader will gain a deeper knowledge of the approaches to consumer behaviour and learn about the theoretical and empirical challenges of studying customer experience management. It also considers the post-modern consumer, which requires a move beyond the purely rationalist perspective of traditional marketing and provides methodological support for firms and scholars who wish to measure cognitive, emotional and behavioural consumer reactions. More specifically, it explores the changes in consumer behaviours, the limitations of traditional measurement approaches and the importance of capturing small insights with neuromarketing metrics, with a chapter contributed by a leading

expert. A new three-point perspective on consumer behaviours is set out that combines behaviour (what people do) with the declared (what people say) and the perceived (what people feel). This approach acknowledges the complexity of consumer behaviours and the methodological bias derived from the use of the traditional techniques (principally the survey) or from big data. Only a holistic perspective can capture the heterogeneous nature of consumer behaviour. The book thereby takes up the theoretical debate about the definition, management and measurement of customer behaviour. It also examines measurement methodologies, an area that has received little attention elsewhere. Besides addressing the scientific community in the field, the book will also be a valuable practical resource for marketing managers, entrepreneurs and consultants who want to implement innovative strategies to manage the customer experience.

One of the most salient forms of modern-day tourism is based on the heritage of humankind. The majority of all global travel entails some element of the cultural past, as hundreds of millions of people visit cultural attractions, heritage festivals, and historic places each year. The book delves into this vast form of tourism by providing a comprehensive examination of its issues, current debates, concepts and practices. It looks at the social, physical and economic impacts, which cause destinations, site managers and interpreters to consider not only how to plan and manage resources but also how to portray the past in ways that are acceptable, accurate, accessible and politically relevant. In the process, however, the depth of heritage politics, the authenticity and inauthenticity of place and experience, and the urgent need to protect living and built cultures are exposed. The book explores these and many other current issues surrounding the management of cultural resources for tourism. In order to help students relate concepts to real-world situations it combines theory and practice, is student learning oriented, is written accessibly for all readers and is empirically rich. Filling a gap in the market, this new title approaches the field through a uniquely international angle, with increased emphasis on the impact of digital technology and supported by international case-studies.
