A tractor repair manual written for the experienced mechanic by professionals in an easy-to-use format , including numerous photos, illustrations and exploded views.

The little grey Fergie is Britain's best-loved tractor, the light user-friendly machine that finally replaced the horse on farms. This highly illustrated account covers the full history of Harry Ferguson's tractor products from his pioneering work before the 1930s to the merger with Massey in 1957. The author has had access to fresh archive material and has interviewed many of the surviving men who were associated with Ferguson. The appeal of the Fergie lay in its lightness and utility, and also in the system of mechanized farming of which it was a part. Throughout the book, reference is made to the implements which lay at the heart of the system. Stuart Gibbard has won "Tractor and Machinery" magazine's award for the best British tractor book five years running.

Launched in 1958, as the successor to the ubiquitous Ferguson TE20, the Massey-Ferguson 35 was a product of the merger of Massey-Harris and Ferguson. It incorporated numerous improvements and new features and became massively popular worldwide. Its companion, the 65 model, was introduced shortly afterwards and was a larger tractor, offered with the revolutionary Multi Power system that gave 12 forward and four reverse gears. Durable and versatile, these tractors are still a practical proposition today, and even unrestored examples command high prices. Michael Thorne, author of Ferguson TE20 in Detail, continues the story as he describes the development of these models, the production versions and their capabilities, options and extras, conversions, implements and their use today. Outstanding surviving examples are featured in some 80 photographs specially taken for this book, and there are approximately 120 accompanying archive illustrations.

Popular Science gives our readers the information and tools to improve their

technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.
