Mastering VBA for Microsoft Office 2016 helps you extend the capabilities of the entire Office suite using Visual Basic for Applications (VBA). Even if you have no programming experience, you'll be automating routine computing processes quickly using the simple, yet powerful VBA programming language. Clear, systematic tutorials walk beginners through the basics, while intermediate and advanced content guides more experienced users toward efficient solutions. This comprehensive guide starts at the beginning to get you acquainted with VBA so you can start recording macros right away. You'll then build upon that foundation to utilize the full capabilities of the language as you use loops and functions, message boxes, input boxes, and dialog boxes to design your own Office automation program. Add-ins, embedded macros, content controls, and more give you advanced tools to enhance productivity, and all instruction is backed by real-world practice projects in Word, Excel, Outlook, and PowerPoint. Productivity is the name of the game, and automating certain computing tasks is an easy solution with significant impact for any business. This book shows you how, with step-by-step guidance and expert insight. Expand Office 2016 functionality with macros. Learn how to work with VBA and the entire Office suite. Create effective code, even with no programming experience. Understand ActiveX, XML-based files, the developer tab, and more. VBA is designed to be understandable and accessible to beginners, but powerful enough to create specialized business applications. If you're ready to begin exploring the possibilities, Mastering VBA for Microsoft Office 2016 gets you started right away.

Even if you're not a programmer, you can quickly learn to write macros, automate tasks, and create custom applications for Office 2007 with Microsoft's Visual Basic for Applications (VBA) and the in-depth instruction in this comprehensive guide. You'll jump right into the basics of recording and running macros with Office's built-in Macro Recorder, before quickly moving to the essentials of VBA syntax, using loops and functions, building effective code, and programming applications in Word, Excel, PowerPoint, Outlook, and Access. This lesson focuses on many seemingly unrelated topics but then combines them in unexpected ways to create something greater than the sum of its parts. First we review the concept of Named Ranges. What are they? How can they help in Excel? Then we cover the OFFSET function. It is truly one of the most powerful, flexible and mostly unused functions in Excel. It is unused because it does take some getting used to, OFFSET doesn't 'work' like the rest of the Excel functions. However, we will go through this function in detail here. Then we move on to using Forms in Excel. Forms give users familiar ways to interact with an Excel worksheet, much like a form on the web. And finally, we combine Named Ranges, OFFSET, Forms and Charts to create animated charts. Excel users will be able to click the worksheet and see the charts animate in real time. There are no macros, no programming involved; just a creative way of combining existing Excel functionality. This lesson covers a lot of ground. To help everyone understand and follow along with the exercises, I have made available a sample workbook. Follow the link in the book and you can receive the workbook to work

on alongside the text. The sample workbook has a bonus extra dynamic chart not covered in the book.
