Look, a White! returns the problem of whiteness to white people. Prompted by Eric Holder's charge, that as Americans, we are cowards when it comes to discussing the issue of race, noted philosopher George Yancy's essays map out a structure of whiteness. He considers whiteness within the context of racial embodiment, film, pedagogy, colonialism, its "danger," and its position within the work of specific writers. Identifying the embedded and opaque ways white power and privilege operate, Yancy argues that the Black countergaze can function as a "gift" to whites in terms of seeing their own whiteness more effectively. Throughout Look, a White! Yancy pays special attention to the impact of whiteness on individuals, as well as on how the structures of whiteness limit the capacity of social actors to completely untangle the way whiteness operates, thus preventing the erasure of racism in social life.

For the world's leading car-makers, the early 1990s brought radical changes. The reports published by MIT shocked management in European and American industries. Former major companies had to face consequences no one had expected. The assembly-lines were reorganized in order to achieve higher quality at lower costs. Five years after the MIT report, this book poses the question: What are the results of this revolution in work organization? Scientists and practitioners, many of them involved in earlier reports, evaluate the changes to the automotive industry in

Hydrogen Fuel Cells for Road Vehicles addresses the main issues related to the application of hydrogen fuel cell technology in the road transportation sector. A preliminary treatment is given on fuel resources and atmospheric pollution concerns which are closely related to the current technology (internal combustion engine) used for moving people and goods. The authors deal, in particular, with the problems that can hinder a widespread hydrogen market (production, storage and distribution), as well as giving an analysis of fuel cell technologies available for utilization of this energy carrier in the automotive field. Hydrogen Fuel Cells for Road Vehicles also examines the concerns faced during the design and realization of a PEM fuel cell system with optimal size and efficiency, evidencing the impact of the individual auxiliary components on energy losses and dynamic stack performance. The book ends with the analysis of two practical case studies on fuel cell propulsion systems. Hydrogen Fuel Cells for Road Vehicles is a useful text for researchers, professionals and advanced students in the fields of automotive and environmental engineering.

emerging from new forms of collaborative practice, this title of AD engages three predominant phenomena: architecture's relationship with digital and telecommunication technology; the media; and economies of globalisation. The articles in the issue explore the relationship between these readings and examine, for the first time, the implications of these phenomena upon forms of architectural invention and production. While much attention has been focused upon the influence of digital media on architectural form and technique, little has examined its far broader implications for forms of architectural practice. Yet, as with modernism and the professionalization of architecture at the end of the 19th century and the rise of architectural corporations in the mid-20th century, the future of architectural design will inevitably depend upon reconfigurations of architectural authorship.
