Abnormal and clinical psychology courses are offered in psychology programs at universities worldwide, but the most recent major encyclopedia on the topic was published many years ago. Although general psychology handbooks and encyclopedias include essays on abnormal and clinical psychology, such works do not provide students with an accessible reference for understanding the full scope of the field. The SAGE Encyclopedia of Abnormal and Clinical Psychology, a 7-volume, A-Z work (print and electronic formats), will be such an authoritative work. Its more than 1,400 entries will provide information on fundamental approaches and theories, various mental health disorders, assessment tools and psychotherapeutic interventions, and the social, legal, and cultural frameworks that have contributed to debates in abnormal and clinical psychology. Key features include: 1,400 signed articles contained in 7 volumes and available in choice of print and/or electronic formats Although organized A-to-Z, front matter includes a Reader's Guide grouping related entries thematically Back matter includes a Chronology, Resource Guide, Bibliography, and detailed Index Entries conclude with References/Further Readings and Cross-References to related entries The Index, Reader's Guide themes, and Cross-References between and among entries all combine to provide robust search-and-browse features in the electronic version.

This book provides, in a single volume, an extensive, research-based evaluation of the most popular clinical assessment tools as applied in forensic settings. These widely used instruments often require important modifications in their administration and interpretation when used for forensic purposes, and it is vital that the clinician is intimately familiar with their correct application, as well as their limitations. The test instruments included are analyzed by senior figures in the field of psychological assessment who are uniquely qualified to discuss them because they have either had a crucial role in the development of the tests, or they have dedicated their careers to advancing our understanding of these clinical assessment measures. Each chapter begins with a summary of the development of the assessment instrument in its more traditional applications in clinical settings, and then considers its utilization in forensic settings. The types of forensic issues which have been addressed with that instrument are reviewed, and an illustrative case example is given which reflects the types of uses and limitations of the assessment technique when applied in a forensic context. New in this edition are a chapter on the MMPI-2-RF and separate chapters for the adult and youth versions of the Hare Psychopathy Checklist. Psychologists using assessment instruments in applied forensic settings will find this to be a valuable and practical source of information, as will attorneys wishing to gain an understanding of the application of these psychological assessment approaches in the courtroom.

Outlining a step-by-step assessment model, Psychological Assessment and Report Writing, Second Edition covers five key topics central to psychological assessment: understanding the context of a referral; determining what data is needed to answer referral questions; gathering the data; integrating the data; and communicating the findings. Authors Karen Goldfinger and Andrew M. Pomerantz review each facet of psychological assessment and report writing—providing how-to instructions and alerting

readers to a myriad of issues they must consider when conducting assessments in clinical, forensic, or educational environments. Filled with varied case examples that promote interest and meet instructional requirements, including one detailed case study that recurs throughout multiple chapters, the book uses sidebars and question and answer sections to encourage readers to consider their own case material and use critical thinking skills as they review each section of the model.

Emotionally charged issues abound in matrimonial practice, especially in custody disputes. Expert testimony can have a dramatic impact on the outcome of a case, and when matters are highly sensitive or sensational the seeming objectivity of an expert can be dispositive. To effectively reinforce or question that testimony, certain specialized knowledge is essential. Scientifically accepted standards and theories are constantly evolving. Keeping up with the data had been a challenge, but one integrated resource has made it simple. Aspen Publishers' Psychological Experts in Divorce Actions pulls all the research together into the definitive guide to understanding the role of psychological evaluations in divorce and custody actions. Focused on providing the best approach to protecting your client's interests, this work explains all the leading testing instruments, what conclusions may be drawn and how to challenge or support those conclusions. In addition to offering effective examination and cross-examination strategies, it assists you in handling the gamut of psychological factors that affect clients in divorce and custody cases. Authors Marc J. Ackerman, Ph.D., and Andrew W. Kane, Ph.D., are licensed psychologists who have been involved in hundreds of custody cases. Drawing on their extensive experience—testing parties to a divorce and treating psychological patients in the clinic—and as psychological experts in the courtroom, they identify the most important psychological evaluation research used in divorce and custody decision-making and distill the information into clear terms lawyers

can readily apply. They also examine vital issues including: Ethics —confidentiality, privilege, duty to warn or protect (Tarasoff), sharing raw data, test integrity Sexual abuse —bona fide or fabricated allegations, psychological effects of sexual abuse, profiles of abuser and abused Testing —personality tests (including MMPI-2, And The new MMPI-2-RF, Rorschach, Millon, TAT); intelligence tests (Wechsler scales, Kaufman scales, Stanford Binet); custody tests (ASPECT, PCRI, PASS, BPS); and many more How divorce affects families —custody, placement, age and gender differences, grandparents, sexual preference, psychological problems

This authoritative handbook provides a definitive overview of the theory and practice of couple therapy. Noted contributors—many of whom developed the approaches they describe—combine clear conceptual exposition with thorough descriptions of therapeutic techniques. In addition to presenting major couple therapy models in step-by-step detail, the book describes effective applications for particular populations and problems. Chapters adhere closely to a uniform structure to facilitate study and comparison, enhancing the book's utility as a reference and text. See also *Clinical Casebook of Couple Therapy*, also edited by Alan S. Gurman, which presents in-depth illustrations of treatment.

When care of younger patients raises thorny legal questions, you need answers you can trust: that's why this book belongs on every clinician's reference shelf. *Principles and Practice of Child and Adolescent Forensic Mental Health* is a timely and authoritative source that covers issues ranging from child custody to litigation concerns as it walks clinicians through the often-confusing field of depositions and courtroom testimony. The book expands on the 2002 volume *Principles and Practice of Child and Adolescent Forensic Psychiatry* winner of the 2003 Manfred S. Guttmacher Award, to meet pressing twenty-first-century concerns, from telepsychiatry to the Internet, while continuing to cover basic issues, such as forensic evaluation, psychological screening, and the interviewing of children for suspected sexual abuse, that are important to both new and experienced practitioners. Many of its chapters have been entirely rewritten by new authors to provide fresh insight into such topics as child custody; juvenile law; abuse, neglect, and permanent wardship cases; transcultural, transracial, and gay/lesbian parenting and adoption; and the reliability and suggestibility of children's statements. It also includes significant material not found in the previous volume: Two chapters on special education offer an introduction to screening instruments and help practitioners determine a child's potential need for special education programs and services. A chapter on cultural competence helps readers improve the accuracy and responsiveness of forensic evaluations and minimize the chance of an unjust outcome resulting from misguided expert opinion. The section on youth violence features three new chapters -- *Taxonomy and Neurobiology of Aggression*, *Prevention of School Violence*, and *Juvenile Stalkers* -- plus a newly written chapter on assessment of violence risk, offering guidance on how to confront problems such as bullying and initiate effective family interventions. A chapter on psychiatric malpractice and professional liability addresses these legal concerns with an eye toward cases involving minors. A chapter on psychological autopsy covers evaluation of the circumstances surrounding pediatric suicides, describing various types of equivocal deaths and discussing legal issues such as admissibility of the autopsy in court. A newly written chapter on the Internet expands the previous book's focus on child pornography to help

practitioners deal with issues ranging from online threats to emotional and legal consequences of interactions in cyberspace. This is a valuable reference not only for practitioners in psychiatry and the mental health field but also for attorneys and judges. It opens up a field that may be too often avoided and helps professionals make their way through legal thickets with confidence.

Now in a substantially revised and expanded second edition, this important work thoroughly details the full range of clinical assessment tools developed by Theodore Millon and his associates. Presented is the most current, authoritative overview of the Millon Clinical Multiaxial Inventory (MCMI), as well as comprehensive information on widely used instruments for such specific populations as adolescents, preadolescents, medical patients, and college students. With a heightened focus on clinical practice, the second edition offers explicit guidance for linking assessment to individualized, evidence-based treatment planning and intervention. Many of the chapters are entirely new, reflecting significant research advances and the development of new inventories. A complete, thorough, and pragmatic guide to clinical assessment, this authoritative book meets a key need for both students and practitioners. T. Mark Harwood, Larry E. Beutler, Gary Groth-Marnat, and their associates describe how to construct a "moving picture" of each patient by integrating data from a variety of sources. Included are detailed, systematic reviews of widely used instruments together with strategies for selecting the best methods for particular referral questions. Readers learn to conduct integrated assessments that take the complexities of the individual personality into account, serve as the basis for developing an effective treatment plan, and facilitate meaningful reporting and client feedback. New to This Edition *Incorporates the latest research findings and assessment/treatment planning tools. *Chapters on the Personality Assessment Inventory and the NEO-PI-R and NEO-PI-3. *A new extended case example runs throughout the chapters. *Critically evaluates the recently published MMPI-2-RF.

Answers to many legal questions often depend on our understanding of the relationship between the human brain and behavior. While there is no evidence to suggest that violence is the sole result of cognitive impairment, research does suggest that frontal lobe impairment in particular may contribute to the etiology of violent behavior. *Murder in the Courtroom* presents a comprehensive and detailed analysis of issues most relevant to answering questions regarding the link between cognitive functioning and violence. It is the first book to focus exclusively on the etiology and assessment of cognitive impairment in the context of violent behavior and the challenges courts face in determining the reliability of neuroscience evidence; provide objective discussions of currently available neuropsychological tests and neuroimaging techniques, and their strengths and limitations; provide a methodology for the assessment of cognitive dysfunction in the context of violent behavior that is likely to withstand a Daubert challenge; and include detailed discussions of criminal cases to illustrate important points.

Clinical and forensic psychologists and psychiatrists, cognitive neuroscientists, and legal professionals will be able to use this book to further their understanding of the relationship between brain function and extreme violence.

The older adult population is booming in the United State and across the globe. With this boom comes an increase in the number of older adults who experience psychological disorders. Current estimates suggest that about 20% of older persons are diagnosable with a mental disorder: Personality disorders are among the most poorly understood, challenging, and frustrating of these disorders among older adults. This book is designed to provide scholarly and scientifically-based guidance about the diagnosis, assessment, and treatment of personality disorders to health professionals, mental health professionals, and senior service

professionals who encounter personality-disordered or "difficult" older adults. *Personality Theories: Critical Perspectives* is the groundbreaking, final text written by Albert Ellis, long considered the founder of cognitive behavioral therapies. The book provides students with supporting and contradictory evidence for the development of personality theories through time. Without condemning the founding theorists who came before him, Ellis builds on more than a century of psychological research to re-examine the theories of Freud, Jung, and Adler while taking an equally critical look at modern, research-based theories, including his own.

Tom Hogan's *Psychological Testing: A Practical Introduction* emphasizes active learning strategies to provide a practical introduction to the field of testing in psychology and allied disciplines. Part I covers the basic concepts of psychological testing, while Part II provides an introduction to the major categories of psychological tests. For each category, a chapter outlines the major conceptual and procedural approaches and gives examples of tests in the category.

This book is a combination of two previously published books by Phil Stahl/Sage, *Conducting Child Custody Evaluations* and *Complex Issues in Child Custody Evaluations*. The book was written as a guide to help students and practitioners walk through the process of conducting a child custody evaluation, a critical skill for a variety of mental health practitioners. The book will cover the mental health expert's many possible roles as a therapist, mediator, evaluator, consultant to attorneys, expert witness, and more. It also address the best interest of the child, legal custody and time share, divorce and its impact on children, and children's developmental needs. The second part takes a step-by-step approach on how to conduct the evaluation, including how to work with children and parents, psychological testing, and writing up the report. The final part, complex issues, draws from the 1999 book, and covers issues such as domestic violence, non-violent high-conflict homes, relocation, special needs children, substance abuse, cultural issues and the alienated child. The author's writing style is friendly and

easy to read, making complex material easy to comprehend and implement. Now in a new Fourth Edition, Psychiatry remains the leading reference on all aspects of the current practice and latest developments in psychiatry. From an international team of recognised expert editors and contributors, Psychiatry provides a truly comprehensive overview of the entire field of psychiatry in 132 chapters across two volumes. It includes two new sections, on psychosomatic medicine and collaborative care, and on emergency psychiatry, and compares Diagnostic and Statistical Manual (DSM-5) and International Classification of Diseases (ICD10) classifications for every psychiatric disorder. Psychiatry, Fourth Edition is an essential reference for psychiatrists in clinical practice and clinical research, residents in training, and for all those involved in the treatment of psychiatric disorders. The second edition of the Handbook of Adult Clinical Psychology: An Evidence Based Practice Approach like its predecessor provides clinical psychologists in training with a comprehensive practice handbook to help build the skills necessary to complete a clinical placement in the field of adult mental health. While practical in orientation, the book is based solidly on empirical evidence. Building on the success of the previous edition this handbook has been extensively revised in a number of ways. Throughout the book, the text, references, and website addresses and have been updated to reflect important developments since the publication of the first edition. Recent research findings on the epidemiology, aetiology, course, outcome, assessment and treatment of all psychological problems considered in this volume have been incorporated into the text. Account has been taken of changes in the diagnosis and classification of psychological problems reflected in the DSM-5. Chapters on ADHD in adults, emotion focused therapy, radically open dialectical behaviour therapy, and schema therapy have been added. The book is divided into 6 sections: Section 1 covers conceptual frameworks for practice (lifespan development; classification and epidemiology; CBT, psychodynamic, emotion focused, systemic and bio-medical models; and general assessment procedures) Section 2 deals with mood problems (depression, bipolar disorder, suicide risk, and anger management) Section 3 focuses on anxiety problems (social phobia, generalized anxiety disorder, panic disorder, obsessive compulsive disorder, post-traumatic stress disorder and depersonalization disorder) Section 4 deals with psychological problems linked to physical health (health anxiety, somatization, chronic pain, adjustment to cancer, and eating disorders) Section 5 focuses on other significant psychological problems that come to the attention of clinical psychologists in adult mental health services (ADHD in adults, alcohol and other drug problems, psychosis, and psychological problems in older adults) Section 6 contains chapters on therapeutic approaches to psychological distress related to complex childhood trauma (dialectical behaviour therapy for borderline personality disorder, radically open dialectical behaviour therapy for over-controlled presentations, and schema therapy). Each of the chapters on clinical problems explains how to assess and treat the condition in an evidence-based way with reference to case material. Interventions from cognitive-behavioural, psychodynamic, interpersonal/systemic and biomedical approaches are described, where there is evidence that they are effective for the problem in question. Skill building exercises and further reading for psychologists and patients are included at the end of each chapter. This book is one of a set of three volumes which cover the lion's share of the curriculum for clinical psychologists in training in the UK and Ireland. The other two volumes are the Handbook of Child and Adolescent Clinical Psychology, Third Edition (by Alan Carr) and the Handbook of Intellectual

Disability and Clinical Psychology Practice, Second Edition edited by Alan Carr, Christine Linehan, Gary O'Reilly, Patricia Noonan Walsh, & John McEvoy).
