The aim of this model course is to meet the mandatory minimum standards of competence for seafarers as electro-technical ratings, in the following functions: electrical, electronic and control engineering; maintenance and repair; and controlling the operation of the ship and care for persons on board, at the support level specified in table A- III/7 of the STCW Code This book was developed in order to deliver a unit standards-based curriculum that is in line with the National Qualifications-Framework (NQF).

This book reminds students in junior, senior and graduate level courses in physics, chemistry

and engineering of the math they may have forgotten (or learned imperfectly) that is needed to succeed in science courses. The focus is on math actually used in physics, chemistry, and engineering, and the approach to mathematics begins with 12 examples of increasing complexity, designed to hone the student's ability to think in mathematical terms and to apply quantitative methods to scientific problems. Detailed illustrations and links to reference material online help further comprehension. The second edition features new problems and illustrations and features expanded chapters on matrix algebra and differential equations. Use of proven pedagogical techniques developed during the author's 40 years of teaching experience New practice problems and exercises to enhance comprehension Coverage of fairly advanced topics, including vector and matrix algebra, partial differential equations, special functions and complex variables

The Spotter's Guide to Urban Engineering is an exciting guide to the technology that underpins modern life. Richly illustrated, it celebrates the wonders of science, engineering and technology in the modern world. Each chapter explores the developments and various engineering features and structures, detailing what they are, what they do, how they do it, and, most importantly, how to identify them.

Community health workers (CHW) play a vital role in the provision of health-care services in South Africa, and the need for the training and development of these CHWs is obvious and urgent. A major obstacle to the provision of such training is the low level of literacy among CHWs. It is for this reason that Juta Academic has teamed up with a number of key organisations and professionals involved in community health and adult education to develop the Health for All series. With over 150 illustrations, these outcomes-based training materials will develop the health-care knowledge and skills of CHWs and bolster their literacy, language and communication skills. The series can be used for health-care training courses, with each of the six books forming a separate module. The publications can also serve as reference books for use in the field.

Concise Introduction to Linear Algebra deals with the subject of linear algebra, covering vectors and linear systems, vector spaces, orthogonality, determinants, eigenvalues and eigenvectors, singular value decomposition. It adopts an efficient approach to lead students from vectors, matrices quickly into more advanced topics including, LU decomposition, orthogonal decomposition, Least squares solutions, Gram-Schmidt process, eigenvalues and eigenvectors, diagonalizability, spectral decomposition, positive definite matrix, quadratic forms, singular value decompositions and principal component analysis. This book is designed for onese­mester teaching to undergraduate students.

Praise for the first edition: "I feel that this book is very well structured and progressive and the way it introduces the topics is coherent and developmental. The use of pictures is extremely helpful as they support the text very effectively...I have found that any work by Tina Bruce is well researched and accessible and always recommend her to my students." Maureen Brookson, University of East Anglia Cultivating Creativity, 2nd edition, shows how early years practitioners can promote creativity in children. It explores the journey children take in developing their creativity, and helps students and practitioners to nurture creativity. Written by a leading expert in creativity, development and learning in young children, Cultivating Creativity links theory and practice to provide a clear framework for this difficult, but vital, aspect of development and learning. Taking a broad conceptualised view of creativity, the author addresses the issue not just in terms of the arts but also the role that creativity has within sciences and humanities. This new edition covers recent and ongoing curriculum, legislative and policy changes

that affect teaching in this area. Recent advances in the field are also addressed including, brain research, movement, outdoor learning and individual learning. 'Janey is like a whirlwind of selflessness. A beautiful spirit in a beautiful country doing a beautiful thing. I encourage my children to be more 'Janey'. With more positive spirits like Janey, the world would be a better place.' - Ben Fogle In 2014 and in her mid-twenties, Janey Lowes had been a vet for just two years when she left her home in County Durham and went travelling. Visiting Sri Lanka, she was horrified to see the state of so many of the island's dogs, in particular the three million strays. Over 5,000 miles from home, Janey decided there and then that she was going to move to the island indefinitely and do everything within her power to help them. She raised £10,000 to get started, setting up a charity called WECare Worldwide, and began work. Frightened, determined and excited all at the same time, she found a local who was willing to work with her and began scouring the streets for dogs in need. Some she patched up as best she could at the roadside, others she brought back and treated in a make-shift surgery she had cobbled together in her new home. With very little equipment, she and her small team came up with new and ingenious ways to treat the animals. In this highly inspiring and heartfelt book full of challenges and adventure, Janey introduces us to her world and the tireless work she carries out. As she says, 'I feel as though all these dogs are my dogs and I have a responsibility to them.' In it, we meet many of the colourful characters who have come to offer help, along with innumerable street dogs who have suffered all sorts of trauma and injury, only to be scooped up by Janey and her team and saved.

The book presents a comprehensive study of important topics in Mechanics of pure and applied sciences. It provides knowledge of scalar and vector in optimum depth to make the students understand the concepts of Mechanics in simple, coherent and lucid manner and grasp its principles & theory. It caters to the requirements of students of B.Sc. Pass and Honours courses. Students of engineering disciplines and the ones aspiring for competitive exams such as AIME and others, will also find it useful for their preparations.
