suffer from nature deficit disorder, but studies have shown that spending mindful, intentional time around trees--what the Japanese call shinrin-yoku, or forest bathing--can promote health and happiness. In this beautiful book--featuring more than 100 color photographs from forests around the world, including the forest therapy trails that criss-cross Japan--Dr. Qing Li, the world's foremost expert in forest medicine, shows how forest bathing can reduce your stress levels and blood pressure, strengthen your immune and cardiovascular systems, boost your energy, mood, creativity, and concentration, and even help you lose weight and live longer. Once you've discovered the healing power of trees, you can lose yourself in the beauty of your surroundings, leave everyday stress behind, and reach a place of greater calm and wellness.

Since its introduction in 1986, this indispensable guide has been hailed as the definitive take-along text on the subject of outdoor medicine. This edition has been completely revised and expanded, making it even more essential for the growing numbers enjoying outdoor activities. With more than 250 illustrations, **MEDICINE FOR THE OUTDOORS** provides state-of-the-art medical procedures for just about every injury or illness likely to be encountered in the wild. It is logically organized, easy to reference, and surprisingly simple to understand. 304 color pages, paperback, improved print quality,

and a lot more plant identification details. This unique book is written by Dr. Nicole Apelian, an herbalist with over 20 years of experience working with plants, and Claude Davis, a wild west expert passionate about the lost remedies and wild edibles that kept previous generations alive. *The Lost Book of Herbal Remedies* has color pictures of over 181 healing plants, lichens, and mushrooms of North America (2-4 pictures/plant for easy identification). Inside, you'll also discover 550 powerful natural remedies made from them for every one of your daily needs. Many of these remedies had been used by our forefathers for hundreds of years, while others come from Dr. Nicole's extensive natural practice. This book was made for people with no prior plant knowledge who are looking for alternative ways to help themselves or their families. This lost knowledge goes against the grain of mainstream medicine and avoids just dealing with symptoms. Instead, it targets the underlying root cause and strengthens your body's natural ability to repair itself. With the medicinal herbal reference guide included, it's very easy to look up your own condition and see exactly which herbs and remedies can help. Let me just offer you a small glimpse of what you'll find inside: On page 145 learn how to make a powerful "relieving" extract using a common backyard weed. This plant acts directly on the central nervous system to help with all kinds of pain and discomfort. You'll also

discover the most effective natural antibiotic that still grows in most American backyards (page 150). Turn to page 43 for the natural protocol Dr. Nicole is recommending for a wide range of auto-immune conditions, after falling prey to MS herself at age 29. I could go on and on because this book contains no less than 800+ other medicinal plants and natural remedies.

The second edition of Predicting Outdoor Sound is an up-to-date reference on the propagation of sound close to the ground and its prediction. New content includes comparisons between predictions and data for road traffic, railway and wind turbine noise; descriptions of source characteristics in the

HARMONOISE model; propagation over rough seas, parallel low walls, and lattices; outlines of numerical methods; gabion (caged stones) and sonic crystal noise barriers; meteorological effects on noise barrier performance; and the prediction requirements for auralization. The book brings together relevant theories, prediction schemes, and data, thereby providing a basis for determining what model or scheme might be applicable for any situation. It also offers a background on useful analytical approximations and the restrictions, as well as difficulties and limitations associated with engineering prediction schemes. The text should be of considerable interest to researchers in outdoor sound propagation and, more generally, it should provide a comprehensive primer on the topic for lecturers, consultants and students in acoustics and noise control.

Drawing on the leading voices of international researchers and practitioners, *Outdoor Therapies* provides readers with an overview of practices for the helping professions. Sharing outdoor approaches ranging from garden therapy to wilderness therapy and from equine-assisted therapy to surf therapy, Harper and Dobud have drawn common threads from therapeutic practices that integrate connection with nature and experiential activity to redefine the "person-in-environment" approach to human health and well-being. comes to believe that a puppy and working on ski patrol at the last great ski town in Colorado will improve her life. When she learns about avalanches that bury people without warning, she challenges herself: “What if I teach a dog to save lives?” This quest propels her to train the best possible search dog, vowing to never leave anyone behind. With no clue how to care for a houseplant, let alone a dog, she chooses a five-week-old Labrador retriever, Tasha. With the face of a baby bear and the temperament of an NFL linebacker, Tasha constantly tests Susan’s determination to transform her into a rescue dog. Susan and Tasha jockey for alpha position as they pursue certification in avalanche, water, and wilderness recovery. Susan eventually learns to truly communicate with Tasha by seeing the world through her dog’s nose. As the first female team in a male-dominated search-and-rescue community, they face resistance at every turn. They won’t get paid even a bag of kibble for their efforts, yet they launch dozens of missions to rescue the missing or recover the remains of victims of nature and crime. Training with Tasha in the field to find, recover, and rescue the lost became Susan’s passion. But it was also her circumstance—she was in many ways as lost as anyone she ever pulled out of an avalanche or found huddled in the woods. “Lostness” doesn’t only apply to losing the trail. People can get lost in a relationship, a business, or a life. Susan was convinced that only happened to other people, until Tasha and a life in the mountains taught her otherwise. premiere cancer researchers reveals an urgent philosophy on the little-known principles that govern medicine—and how understanding these principles can empower us all. Over a decade ago, when Siddhartha Mukherjee was a young, exhausted, and isolated medical resident, he discovered a book that would forever change the way he understood the medical profession. The book, *The Youngest Science*, forced Dr. Mukherjee to ask himself an urgent, fundamental question: Is medicine a “science”? Sciences must have laws—statements of truth based on repeated experiments that describe some universal attribute of nature. But does medicine have laws like other sciences? Dr. Mukherjee has spent his career pondering this question—a question that would ultimately produce some of most serious thinking he would do around the tenets of his discipline—culminating in *The Laws of Medicine*. In this important treatise, he investigates the most perplexing and illuminating cases of his career that ultimately led him to identify the three key principles that govern medicine. Brimming with fascinating historical details and modern medical wonders, this important book is a fascinating glimpse into the struggles and Eureka! moments that people outside of the medical profession rarely see. Written with Dr. Mukherjee’s signature eloquence and passionate prose, *The Laws of Medicine* is a critical read, not just for those in the medical profession, but for everyone who is moved to better understand how their health and well-being is being treated. Ultimately, this book lays the groundwork for a new way of understanding medicine, now and into the

eucalyptus groves in California, Florence Williams investigates the science behind nature's positive effects on the brain. Delving into brand-new research, she uncovers the powers of the natural world to improve health, promote reflection and innovation, and strengthen our relationships. As our modern lives shift dramatically indoors, these ideas—and the answers they yield—are more urgent than ever.

Educators have a key pedagogical role in promoting early years outdoor play in natural environments. Active outdoor play involving risk-taking has been linked to positive effects on social health and behaviour, and encourages physical activity and motor skill development. At the same time, it has been recognised that opportunities for children to experience outdoor learning have been reduced in recent decades due to the impacts of technology, urbanisation and social change. This book brings together renowned authors, with research and professional experience in a range of disciplines, to provide a comprehensive guide to developing positive and engaging outdoor learning environments in the early years. Part 1 looks at pedagogy and outdoor environments, and considers the value of risk-taking and developing a young child's appreciation of the natural world. Part 2 examines the key principles involved in the design and planning of these spaces, such as applying the relevant equipment standards and regulations. Part

3 explores how educators can develop an understanding of children's own perspectives on outdoor spaces, including promoting agency and recognising the importance of private playspaces. Part 4 examines different cultural perspectives on outdoor play, including Indigenous approaches, while Part 5 considers the range of experiences possible beyond purposefully-designed spaces, from visiting nature reserves to exploring urban environments. 'A much needed and comprehensive resource for pre-service teachers and educators of young children that encompasses philosophies, theories, pedagogy and practice for purposeful engagement of children in all kinds of outdoor spaces in Australia.' - Dr Kumara Ward, Director of Academic Program: Early Childhood Education, Western Sydney University 'This seminal work will provide a shared language and framework for educators, policy developers, community builders and researchers in exploring the justifications for engaging children in well considered outdoor learning places and spaces.' - Leanne Grogan, School of Education, Outdoor and Environmental Studies, La Trobe University.

The Book That Makes Dying by Heart Attack Seem Downright Boring Simply by living a normal life, you have an excellent chance of becoming yet another statistic on the list of leading causes of death. But Buck Tilton prefers to ponder the alternatives. In

How to Die in the Outdoors, he presents 150 more interesting and unique ways to perish, from snake bite, elephant foot, rhino horn, and more! With witty prose, Tilton describes not only the details of how you can die—some intriguingly gory, yet all based on facts—but also ways to avoid death should a life-threatening situation arise before you're ready to leave this world for whatever afterlife there may be. This guideline defines ventilation and then natural ventilation. It explores the design requirements for natural ventilation in the context of infection control, describing the basic principles of design, construction, operation and maintenance for an effective natural ventilation system to control infection in health-care settings.

"A fast-paced account of Mt. Hood. For readers who are unfamiliar with the rugged and beautiful Hood River area, [Van Tilburg] balances its undeniable perils with the joys of its scenic wonders . . ."

--Publisher's Weekly "Van Tilburg's dogged spadework in translating to the page the intricate essentials of his unique trade makes each breathtaking rescue literally come to life. Exhilarating take on the daily life of a unique brand of doctor."

--Kirkus "As a medical doctor, a previously published author (Backcountry Snowboarding; Introducing Your Kids to the Outdoors), and an adventure-sports devotee himself, Van Tilburg is uniquely qualified to describe the fears, excitement, frustration, and rewards of these searches. He examines the high costs of search-and-rescue operations and provides an interesting overview of the debate on whether victims should be held responsible for some of these costs. Young adults will likely enjoy this introduction to the field of wilderness medicine. Filled with adventure and good advice." --Library Journal

"Outdoors folk in Oregon have long benefited from Dr. Chris Van Tilburg's skills as an emergency doctor and his selfless devotion to rescuing injured hikers and climbers as a volunteer for his local mountain rescue service. Now his other great skill--as a writer--has brought these exciting tales to the

country at large. Chris captures the excitement of a rescue with the passion of a true mountaineer, and does so in highly readable prose." --John Harlin III, Editor of The American Alpine Journal and author of The Eiger Obsession, Mount Rainier and The Climber's Guide to North America Christopher Van Tilburg, MD is an emergency room physician, a ski patrol doctor, an emergency wilderness physician, and a member of the Hood River Crag Rats, the oldest mountain rescue team in the country. When Dr. Van Tilburg's beeper goes off, the call may take him racing up a mountain peak to rescue an injured hiker, scaling a rocky ledge to intubate a hiker who has fallen over a cliff, into a blizzard to search for missing skiers, or to a mountain airplane crash scene for body recovery. Dr. Van Tilburg's work requires a unique combination of emergency medicine, survival skills, agility, and extreme sports. In Mountain Rescue Doctor, Van Tilburg shares personal stories of harrowing and suspenseful rescues and recoveries, including the recent Mount Hood disaster, which claimed the lives of three climbers. We learn about the tools and techniques of emergency wilderness medicine, as well as the feats of human strength and delicacy required to treat patients under extreme conditions. And finally, we confront some of the ethical challenges a wilderness physician faces in making tough choices about who can be saved and at what cost. Mountain Rescue

This essential resource is designed to help busy early years practitioners to support the mental health of young children through outdoor play. Promoting social and emotional wellbeing in childhood has never been more important, and outdoor play is a crucial tool to build resilience, develop healthy relationships, and boost self-esteem. Using relatable case studies that demonstrate achievable change, the book is full of practical advice and strategies for exploring nature in both natural and man-made

landscapes, and includes guidance on how to co-create inviting play spheres with children. Each chapter provides: Adaptable and cost-effective activities designed to help children feel more confident and connected to the world around them. Case studies and reflective opportunities to prompt practitioners to consider and develop their own practice. An accessible and engaging format with links to theorists, risk assessment, and individual schemas. Outdoor play allows young children to explore who they are and what they can do. It supports them as they learn to think critically, take risks, and form a true sense of belonging with their peers and with the wider community. This is an indispensable resource for practising and trainee early years practitioners, Reception teachers, and childminders as they facilitate outdoor play in their early years setting.
