Entrepreneurship and small businesses are the basis for economic development all over the world. They play an important role in employment, income and societal changes, particularly in transition economies. The systemic social and economic changes which underlined the early stage of transition created the conditions for the development of entrepreneurship and small firms. This book employs various strands of theories of entrepreneurship, theories of growth of the firm and the new institutional economics approach in order to develop a more integrated framework for the investigation of the determinants of entrepreneurial activity and small business growth in the transition and post-conflict economy of Kosova. This book tells the story of Commodore through first-hand accounts by former Commodore engineers and managers. Reliving the early years of an icon in the personal computer revolution turns out to be a fascinating and improbably hilarious journey. This gripping tale of ambition, greed, and inspired engineering gives readers a front row seat at the dawn of the personal computer. Engineers and managers relate their experiences through personal first-hand accounts, vividly recalling the most important moments of Commodore's entry into computers in 1976 until its demise in 1994. The Commodore years are tumultuous, owing to their volatile founder, Jack Tramiel. He pushes his team to extreme limits, demanding that they almost kill themselves to meet his lofty expectations. Against all odds, his engineers deliver more color, more character, and more value than either Apple or IBM. While other companies receive more press, Commodore sells more computers. They cut a path of destruction through the competition, knocking out Sinclair, Tandy, Texas Instruments, and Atari and almost mortally wounding Apple. Unfortunately, Tramiel's cut throat tactics also prove to be his undoing. He uses up his managers and employees like disposable ink cartridges, producing the highest employee turnover rate in the industry.

This enlightening account will be of interest to students and academics investigating science measurement as well as policy makers working in this burgeoning field.

As world population grows, and more people move to cities and suburbs, they place greater stress on the operating system of our whole planet. But urbanization and increasing densities also present our best opportunity for improving sustainability, by transforming urban development into desirable, lower-carbon, compact and walkable communities and business centers. Jonathan Barnett and Larry Beasley seek to demonstrate that a sustainable built and natural environment can be achieved through ecodesign, which integrates the practice of planning and urban design with

environmental conservation, through normal business practices and the kinds of capital programs and regulations already in use in most communities. Ecodesign helps adapt the design of our built environment to both a changing climate and a rapidly growing world, creating more desirable places in the process. In six comprehensively illustrated chapters, the authors explain ecodesign concepts, including the importance of preserving and restoring natural systems while also adapting to climate change; minimizing congestion on highways and at airports by making development more compact, and by making it easier to walk, cycle and take trains and mass transit; crafting and managing regulations to insure better placemaking and fulfill consumer preferences, while incentivizing preferred practices; creating an inviting and environmentally responsible public realm from parks to streets to forgotten spaces; and finally how to implement these ecodesign concepts. Throughout the book, the ecodesign framework is demonstrated by innovative practices that are already underway or have been accomplished in many cities and suburbs—from Hammarby Sjöstad in Stockholm to False Creek North in Vancouver to Battery Park City in Manhattan, as well as many smaller-scale examples that can be adopted in any community. Ecodesign thinking is relevant to anyone who has a part in shaping or influencing the future of cities and suburbs – designers, public officials, and politicians.

This third edition of *Teaching and the Case Method* is a further response to increased national and international interest in teaching, teachers, and learning, as well as the pressing need to enhance instructional effectiveness in the widest possible variety of settings. Like its predecessors, this edition celebrates the joys of teaching and learning at their best and emphasizes the reciprocal exchange of wisdom that teachers and students can experience. It is based on the belief that teaching is not purely a matter of inborn talent. On the contrary, the knowledge, skills, and attitudes that make for excellence in teaching can be analyzed, abstracted, and learned. One key premise of *Teaching and the Case Method* is that all teaching and learning involve a core of universally applicable principles that can be discerned and absorbed through the study and discussion of cases.

This work considers the economic policy dinosaurs which apparently went into extinction in the 1980s. They are: the move from "classical" regulation to deregulation; the move from public enterprise to privatization; the move from Keynesian to "monetarist" macroeconomic policy;

the shift from rapid growth in government spending and staffing to stabilization and cutbacks; the move from progressive income tax structures towards "flatter taxes"; and the shift from progressive-era public administration to "new public management". None of these major policy shifts were predicted by economists or other mainstream social scientists. The author compares the actual changes with previously established theoretical accounts of what makes policy shift and explores how far the changes can be understood in terms of the power of ideas, the power of interests, the effect of changing social contexts and "self-destructive" dynamics of public policy.

Drawing on recent advances in the social sciences, this volume shows how rigorous, theory-based empirical research can help improve the management of public policies and programs—and how better governance can lead to better performance. These original essays demonstrate how better data and improved statistical techniques have allowed researchers to construct more complex models of governance processes and thereby assess the effects of many variables on policy and program outcomes. They present useful research results that illuminate such issues as automatic grade advancement in public schools, management of federally-funded job-training programs, reducing welfare caseloads, and management of welfare-to-work programs. Illustrating a range of theoretical and methodological possibilities, this book shows how more sophisticated research in public management can help improve government performance.

Most of Chester Barnard's career was spent in executive practice. A Mount Hermon and Harvard education, cut off short of the bachelor's degree, was followed by nearly forty years in the American Telephone & Telegraph Company. His career began in the Statistical Department, took him to technical expertness in the economics of rates and administrative experience in the management of commercial operations, and culminated in the presidency of the New Jersey Bell Telephone Company. He was not directly involved in the Western Electric experiments conducted chiefly at the Hawthorne plant in Cicero, but his association with Elton Mayo and the latter's colleagues at the Harvard Business School had an important bearing on his most original ideas. Barnard's executive experience at AT&T was paralleled and followed by a career in public service unusual in his own time and hardly routine today. He was at various times president of the United Services Organization (the USO of World War II), head of the General Education Board and later president of the Rockefeller Foundation (after Raymond Fosdick and before Dean Rusk), chairman of the National Science Foundation, an assistant to the Secretary of the Treasury, a consultant to the American representative in the United Nations Atomic Energy Committee, to name only some of his public interests. He was a director of a number of companies, a fellow of the American Association for the Advancement of Science and of the American Academy of Arts and Sciences. He was a lover of music and a founder of the Bach Society of New Jersey.
