This bestseller has been updated to reflect new concepts and ideas. The assessment of mental health problems is vital to the successful planning and treatment for people suffering from them. This book provides a step-by-step guide of how to conduct this assessment, giving student nurses a humanistic perspective on the subject. New material in this second edition includes person-centered assessment and care planning, and culture and culturally-appropriate assessment and care planning.

Clearly written, comprehensive coverage of psychiatric mental-health nursing delivers what nursing students need to meet the challenges of health care today. Its evidence-based, holistic approach to nursing practice focuses on both physiological and psychological disorders. Designed to be used in longer psychiatric mental-health nursing courses, this text provides students with a comprehensive grounding in therapeutic approaches as well as must-know DSM-5 disorders and nursing interventions.

This focused approach to psychiatric mental health provides you with an uncomplicated way to understand the often-intimidating subject of psychiatric nursing. Inside you'll find two themes of psychiatric mental health nursing: the How of Communication and the Why of Evidence. You will also find easy-to-understand explanations of the research that applies to psychiatric nursing issues and how to incorporate this evidence into everyday care.

Introducing Mental Health Nursing offers a systematic overview of both the science and the art of caring for people experiencing mental health problems. It addresses the attitudes, knowledge and skills required to provide care for service users across all health-care settings, from specialist mental health services to general hospitals and community care. The authors place the service user at the centre of all aspects of mental health care and emphasise the importance of the therapeutic relationship as the cornerstone of good mental health nursing practice. Emphasis is placed on the role of the nurse as an intrinsic member of the mental health team, and nurses are encouraged to think critically about the perspectives that they bring to their practice. The second edition has been fully revised and updated, with increased focus on Indigenous social and emotional well-being, as well as two new chapters on Recovery and Cultural Safety. A must-have book for undergraduate nursing students, new graduates and professionals changing specialties or simply wishing to refresh their mental health nursing knowledge. 'This is a brave and dignified text - beautifully written and conceived and given the current texts available - a must for any serious undergraduate nursing program in an Australian university.' - David Buchanan, De Montfort University, Leicester, United Kingdom 'I recommend this text to all students of nursing, whether you intend to pursue a career in this speciality or if you simply desire to provide the best care possible in any field of practice.' - Associate Professor Stephen Elsom RN PhD, Director, Centre for Psychiatric Nursing, The University of Melbourne

This psychiatric-mental health undergraduate textbook, based on the theories of Hildegard Peplau and Joyce Travelbee, is the first recent book devoted to interpersonal relations as the foundation for therapeutic practice in psychiatric nursing. It guides the student through the essential phases of self-discovery necessary to integrate interpersonal nursing theory into practice, and provides a historical overview of the profession. The book addresses the most current ISPN and APNA competencies and presents content designed to foster self-growth, and critical thinking and decision-making skills, as well as to implement therapeutic interventions. It offers an overview of theories of mental illness and a detailed discussion of commonly seen psychiatric disorders, and addresses mental health care settings across the lifespan and different populations. Clinical case studies and first-hand accounts vividly describe the realities of living with specific mental illnesses, "What would you do?" questions stimulate discussions, and sample and practice care plans for chronic mental

illness facilitate integration of concepts into practice. Evidence-based practice summaries from psychiatric nursing and related research literature are included, and NANDA guidelines are integrated throughout. A new chapter with DSM-V updates is also available. This affordably priced text additionally comes with supplementary materials for both teachers and students, including handy review guides, summaries, drug monographs, and hyperlinks to films and video illustrating content. A test bank and PowerPoint slides are also available for instructors. Key Features: Integrates and applies the Peplau/Travelbee interpersonal relations theories to the four-step Assessment, Planning/Diagnosing, Implementation, and Evaluation (APIE) nursing process Addresses critical thinking, clinical decision making, therapeutic interventions, case management roles, and mental health care settings across the lifespan Features NCLEX preparation questions, vivid clinical scenarios, and evidence-based practice summaries Addresses the most current ISPN and APNA competencies A new chapter with DSM-V updates is available Both student and teacher digital aids, including review guides, summaries, hyperlinks to films and video, and drug monographs are available A test bank and PowerPoint slides are also available for instructors eBook Features (available in all eBook formats): Bidirectional link between Key Terms and their glossary definitions Learning Outcomes at start of chapters link to respective sections in book Hyperlinks to supplementary films and videos Care plans DSM-V update This book is also available as part of a discounted set. Awarded second place in the 2017 AJN Book of the Year Awards in Psychiatric and Mental Health Nursing. "I welcome, at long last, a book on global mental health targeted to nurses, the front-line health worker for billions of people around the world. The roles that nurses can, and should, play in mental health care are diverse and this book addresses both well-trod as well as emerging concerns across the continuum of care from promotion to prevention to treatment. Importantly, at the heart of this diversity is the foundation of compassion and care, the hallmark of the nursing profession." – Vikram Patel, Professor of International Mental Health and Wellcome Trust Principal Research Fellow in Clinical Science, Centre for Global Mental Health, London School of Hygiene and Tropical Medicine, UK Psychiatric disorders have consistently been identified as serious and significant global burdens of disease, yet meeting the needs of people in mental distress has not often been a priority in health care. This important reference work sets out the knowledge base for understanding the state of mental health care globally, and translating that into effective practice. The Handbook provides a historical and contemporary context of mental health care, identifies and discusses evidence-based standards of care and strategies for mental health promotion and explores the need to deliver care from interdisciplinary and community-based models, placing these imperatives within a human rights and empowerment framework. It is made up of four core sections which look at: Key and emerging issues that affect global mental health practice and research, including the social context of health; Evidence-based health promotion strategies for major areas of practice internationally; A range of country studies, reflecting different problems and approaches to mental health and mental health care internationally; and What constitutes empowering practice. The only comprehensive work looking at global perspectives on mental health nursing, this is an invaluable reference for all students, academics and professionals involved in mental health research with an interest in global or cross-cultural issues.

Rev. ed. of: Foundations of psychiatric mental health nursing / [edited by] Elizabeth M. Varcarolis, Margaret Jordan Halter. 6th ed. c2010.

Awarded first place in the 2017 AJN Book of the Year Awards in Psychiatric and Mental Health Nursing. This book introduces an innovative technique for therapeutic communication in mental health nursing, expanding the toolkit for nurses seeking to engage challenging patients who have not responded to more conventional therapeutic methods. Linking nursing communication to current research on metaphor and figuration, it is illustrated with accessible clinical examples. Metaphor is a key component of talk-based psychotherapies. But many of the patients whom nurses encounter in the inpatient setting are not good candidates for talk-based approaches, at least initially, because they are violent, withdrawn, highly regressed, or otherwise lacking a vocabulary to convey thoughts and feelings. This book offers specific clinical examples of an approach called the "gestural bridge." This is a method for structuring games and physical activities which connect metaphorically to a patient's personal themes, activating narrative and observational agency and enabling an exchange of meaning to begin at a time when conventional language is not available. Rooted in what nursing theorists have called the "embodied" or "aesthetic" way of knowing, this approach is both specific and easily grasped. Drawing from contemporary work in literary theory, semiotics, metaphor theory, cognitive science, philosophy, linguistics, psychoanalysis, and the arts, Therapeutic Communication in Mental Health Nursing is important reading for advanced-level practitioners, students, and researchers interested in communication and relationship-building in nursing.

This text fills a void in advanced practice nursing literature by providing a foundation for integrating psychopharmacology, psychotherapy and Complementary and Alternative Medicine (CAM) into advanced practice nursing. The text includes coverage of neurobiology, theory and research evidence related to psychopharmacology, psychotherapy and complementary and alternative medicine interventions. This text addresses the issue of defining and integrating relationship-based approaches with psychopharmacological and CAM approaches by providing beautifully-designed and easy-to-follow decision trees for initiating specific treatment and discussion of specific continuing care issues. This text has a lifespan focus and includes pediatric pointers and aging alerts.

New DSM-5 content! Whether it's an entire course on psychiatric nursing or integrating these principles into an existing course, this is the text that's concise, engaging, and informative. It offers an evidence-based, holistic approach to mental health nursing—in a streamlined format that explores nursing diagnoses for both physiological and psychological disorders. It's the psychiatric nursing text that students actually read, understand, and use.

Addressing contemporary mental health issues facing psychiatric nursing today, as well as traditional clinical skills, this reference work links stress, trauma, and behavioural health problems to neurobiological function and immune system depletion. This framework pinpoints assessment and selection of intervention strategies especially useful in this era of managed care, focused care, and time-limited treatment. The book describes the biology of mental illness and psychopharmacological interventions, provides a DSM-IV diagnosis and a psychiatric nursing diagnosis to a patient condition within the context of the nursing care plan, and clearly demonstrates how nurses integrate neurobiological, behavioural, and social science theories and research into patient care.
