Miscanthus is a promising non-food crop yielding high quality lignocellulosic material which can be used in a number of ways, including energy and fibre production, thatching, and industrial use. This book encompasses the results and recommendations arising from extensive trials and experiments carried out by the leading European research organisations and institutions in the field. Much of the research was performed under the auspices of the Miscanthus Productivity Network, established under European Union's Directorate General for Agriculture (DG VI). This book presents expert guidance to growth conditions and breeding of Miscanthus, potential productivity and economics, environmental aspects, and harvesting, storage and utilisation. A guide to this increasingly important subject is long overdue and will be welcomed by all those involved in biomass production and renewable energies, or assessing the potential of Miscanthus as a non-food crop.

This book critically analyzes the concept of strategic management accounting, the implications this emerging paradigm will have on the accounting profession, and the ramifications for businesses at large. This research examines current literature, and illustrates these concepts with current market examples. This manuscript approaches the topic in a way that is unique by linking the concept of SMA to the integrated reporting framework. In essence, strategic management accounting is a theory with broad-based support, but the IR framework and reporting structure provides a vehicle through which progress, costs, and benefits of a more strategic accounting function can be evaluated. Focusing on principles, primarily for internal management utilization, the following provides an outline and summary of concepts and techniques that can be used to elevate the role of the management accounting function. Whether you are a management expert, an accounting professional, or simply someone looking to keep up to date with emerging business trends, this text provides the content, and action-oriented steps to meet those expectations.

This book describes the emerging field of revenue management and its applications across a broad spectrum of business activity. It recounts the history and development of revenue management and addresses the analytical tools needed to integrate revenue management into management generally and financial and accounting practice in particular. Revenue Management discusses and assesses various pricing practices and other revenue management techniques. It gives particular attention to the role of capacity analysis and the connection of revenue management to the theory of constraints. While revenue management originated in the service industries, it is now practiced across a broad spectrum of business and not-for-profit organizations. This book will be a useful guide to managers at all levels who wish to give greater consideration to the importance of revenue management in their organizations. The second edition reorganizes the presentation of the subject, adds many new examples, and concludes with a chapter on emerging issues.

Modern technology and innovation are vital to the success of all companies, be they hi-tech firms or companies seemingly unaffected by technology and innovation; whether established firms or business start-ups. This book focuses on understanding technology as a corporate resource, covering product development, design of systems and the managerial aspects of new and high technology. Topics investigated include: the internal organization of high technology firms the management of technology in society managing innovation dilemmas and strategies. The wide-ranging experience of the teachers and experts contributing to this book has resulted in an integrated, multi-disciplinary, textbook that provides an introductory overview to managing technology and innovation in the twenty-first century. This text is essential reading for students of business and engineering concerned with technology and innovation management.

'Biodiversity' at its simplest, refers to the variety of species inhabiting Planet Earth. It is essential to the well-being of the planet. There is now a scientific consensus around the current ongoing crisis in biodiversity arising from both climate change and human activities. Experts believe we are in the middle of a mass extinction of biodiversity with devastating consequences for our planet. Accounting for Biodiversity explores the need for companies to actively protect, conserve and improve biodiversity within their sphere of operation. The 14 chapters written by a selected team of experts investigate the ways in which companies are embracing their responsibility through a variety of biodiversity initiatives and innovative models designed to improve the recording, reporting and valuing of biodiversity. Global case studies look at biodiversity accounting in Africa, Asia, Australasia, Europe and South America. Overall, this book provides a comprehensive set of reflections on accounting for biodiversity and recommendations for the future. This book is essential reading for all those interested in the contribution that accounting can make to the preservation of biodiversity. As we see increasing awareness of the importance of sustainability and ecological responsibility in business activity it is relevant and should prove informative to students, managers, accountants and those in business more generally. It is also important for all those interested in conserving biodiversity.

While laboratory research is the backbone of collecting experimental data in cognitive science, a rapidly increasing amount of research is now capitalizing on large-scale and real-world digital data. Each piece of data is a trace of human behavior and offers us a potential clue to understanding basic cognitive principles. However, we have to be able to put the pieces together in a reasonable way, which necessitates both advances in our theoretical models and development of new methodological techniques. The primary goal of this volume is to present cutting-edge examples of mining large-scale and naturalistic data to discover important principles of cognition and evaluate theories that would not be possible without such a scale. This book also has a mission to stimulate cognitive scientists to consider new ways to harness big data in order to enhance our understanding of fundamental cognitive processes. Finally, this book aims to warn of the potential pitfalls of using, or being over-reliant on, big data and to show how big data can work alongside traditional, rigorously gathered experimental data rather than simply supersede it. In sum, this groundbreaking volume presents cognitive scientists and those in related fields with an exciting, detailed, stimulating, and realistic introduction to big data – and to show how it may greatly advance our understanding of the principles of human memory, perception, categorization, decision-making, language, problem-solving, and representation.

Business scandals are always with us from the South Sea Bubble to Enron and Parmalat. As accounting forms a central element of any business success or failure, the role of accounting is crucial in understanding business scandals. This book aims to explore the role of accounting, particularly creative accounting and fraud, in business scandals. The book is divided into three parts. In Part A the background and context of creative accounting and fraud is explored. Part B looks at a series of international accounting scandals and Part C draws some themes and implications from the country studies.

Artefacts, Archives, and Documentation in the Relational Museum provides the first interdisciplinary study of the digital documentation of artefacts and archives in contemporary museums, while also exploring the implications of polyphonic, relational thinking on collections documentation. Drawing on case studies from Australia, the United Kingdom, and the United States, the book provides a critical examination of the history of collections management and documentation since the introduction of computers to museums in the 1960s, demonstrating how technology has contributed to the disconnection of distributed collections knowledge. Jones also highlights how separate documentation systems have developed, managed by distinct, increasingly professionalised staff, impacting our ability to understand and use what we find in museums and their ever-expanding online collections. Exploring this legacy allows us to rethink current practice, focusing less on individual objects and more on the rich stories and interconnected resources that lie at the heart of the contemporary, plural, participatory 'relational museum.' Artefacts, Archives, and Documentation in the Relational Museum is essential reading for those who wish to better understand the institutional silos found in museums, and the changes required to make museum knowledge more accessible. The book is a particularly important addition to the fields of museum studies, archival science, information management, and the history of cultural heritage technologies.

Management Accounting is part of the celebrations to mark CIMA's 90th anniversary in 2009. It looks at the development of cost and management accounting from the founding of the Institute to today. It considers a number of immediate challenges to management accountants and surveys a range of issues and challenges that will likely affect management accounting thought and practice in the future. The authors examine the possibilities for accountants to widen their focus and become more familiar with the enterprise technology determining their organisations' cost structures and with the effects of multiple production in various locations, such as economies or diseconomies of scale. Such change may require the alteration of traditional cost models used by accountants to become more nuanced. The book suggests how this may be accomplished and highlights the need for management accountants to work as part of management teams throughout the organisation as business partners rather than remain grounded in specialist information provision roles. Alnoor Bhimani is Professor of Management Accounting at the London School of Economics. He is also a Certified Management Accountant as well as an author of 15 books and over 100 articles. Michael Bromwich was CIMA's

Professor of Accounting and Financial Management at the London School of Economics and Political Science (1985 to 2006), now Emeritus. He is a Past President of CIMA (1987/88) and currently serves on CIMA's Technical Committee. A unique survey of 90 years of CIMA research Analyses the research to determine future challenges for management accounting and business practices Charts the history of management accountancy and business practice over nearly 100 years

The rapid rise in importance of the role of the chief financial officer—from back-office accountant to front-line executive—is unrivaled by that of any other corporate position. With access to every facet of the business, CFOs now wield a level of influence matched only by chief executives. This book explains how CFOs earned their privileged status, and what the future may hold for them. It describes their ever-expanding role, and how they are reshaping their departments to help them deal with that transformation. Insights from current and former CFOs provide a first-hand perspective on finance leaders' aspirations and doubts. It is a useful reference for finance chiefs seeking to learn from peers and benchmark their own performance; for those looking to build a career in the C-Suite; for managers seeking to improve their relationship with the finance department; for service providers—banks, accountancies and consulting firms—and anyone else who wants to get on the good side of the keeper of the corporate checkbook.

Every organization, public and private, no matter what its size, purchases goods and services. Large organizations also have considerable influence over the practices of their suppliers. As greener purchasing practices have become more common in large organisations, the implications for companies in the supply chain have similarly increased. Yet greener purchasing policies remain the exception rather than the norm in large organizations. Why is this? And how can environmental purchasing practices that have produced tangible business benefits for a number of companies worldwide receive wider take-up? Greener Purchasing: Opportunities and Innovations has been published to facilitate the development and dissemination of best practice in environmental supply chain and procurement management worldwide. Divided into four sections, covering "The Public Sector", "The Private Sector", "Innovations" and "Case Studies", this book brings together international expertise from four continents, including contributions from organisations such as the US EPA, Environment Canada, Procter & Gamble, Xerox and The Body Shop, as well as describing burgeoning new initiatives such as the Japanese and European Green Purchasing Networks. It provides a number of checklists and examples on how to establish and maintain successful greener purchasing and supply chain practices in order to bring not only environmental, but business value to organisations of all sizes. The book is essential reading for purchasing officers, environmental managers, CEOs, consultants, academics and students interested in the topic around the world.

Value creation is at the heart of an economic enterprise, defining its capability to serve customers and generate profits and growth. This fact has led to an ever-increasing set of tools and techniques that start with customers, focusing on serving their preferences from the very inception of a product until its disposal. And this data is required to implement a value creation approach that has its roots in the Management Accounting System (MAS). The resulting model is called the Value-based Cost Management System (VCMS). If you or any manager want to take the lessons you learned in product development, process management, and marketing, this book will help you extend this knowledge to your MAS. This book makes this transformation both logical and easy to implement, with a focus on the new types of information that can be garnered when the MAS is modified to fit the value creation approach. The authors of the book will provide, upon request, a simplified automated data collection template that will ease the implementation process.
