Books Are Weapons Books have wielded an immense power for good and evil throughout the history of the human race. Here is a thoughtful and probing discussion of sixteen of the most important works of all time which influenced history, economics, culture, civilization, and scientific thought from the Renaissance to the present day. Such widely different, but immensely powerful books as Hitler's *Mein Kampf*, which foreshadowed the death and destruction of World War II, Harvey's famous volume on blood circulation which revolutionized medical theory and treatment, Einstein's theories on relativity which opened the atomic age are clearly described in this provocative and readable volume. Dr. Downs, former President of the American Library Association and head of the University of Illinois Library, also shows the widespread and decisive influence of other great works, including Newton's presentation of his discovery of the laws of gravity, a cornerstone in scientific theory today, Darwin's *Origin of Species* which many churchmen thought contradicted the Bible, Harriet Beecher Stowe's *Uncle Tom's Cabin* which is considered one of the major causes of the American Civil War, and Freud's *Interpretation of Dreams*, the great volume from the man who revolutionized modern man's thoughts about himself. Altogether, here is a fascinating presentation of books from many times which shows the tremendous power of the printed word on human development.

A brief, clear, thorough, and highly enjoyable approach to clinical microbiology, brimming with mnemonics, humor, summary charts and illustrations, from AIDS to flesh-eating bacteria to ebola, mad cow disease, hantavirus, anthrax, smallpox, botulism, etc.

Written by the pioneering scientist, theorist and activist J. D. Bernal, this futuristic essay explores the radical changes to human bodies and intelligence that science may bring about, and suggests the impact of these developments on society. Bernal presents a far-reaching vision of the future that encompasses space research and colonization, material sciences, genetic engineering, and the technological hive mind. In his view, it will be possible for the conditions of civilization to reach a state of materialist utopia. For all three realms—the world, the flesh, and the devil—Bernal attempted to map out the utmost limit of technoscientific progress, and found that there are almost no limits. With a new introduction by McKenzie Wark.
