Henry Spearman, the balding economics professor with a knack for solving crimes, returns in *The Mystery of the Invisible Hand*—a clever whodunit of campus intrigue, stolen art, and murder. Having just won the Nobel Prize, Spearman accepts an invitation to lecture at Monte Vista University. He arrives in the wake of a puzzling art heist with plans to teach a course on art and economics—only to be faced with the alleged suicide of womanizing artist-in-residence Tristan Wheeler. When it becomes clear that Wheeler had serious enemies and a murderer is in their midst, Henry Spearman is on the case. Was Wheeler killed by a jilted lover, a cuckolded husband, or a beleaguered assistant? Could there have been a connection between Wheeler's marketability and his death? From the Monte Vista campus in San Antonio to the halls of Sotheby's in New York, Spearman traces the connections between economics and the art world, finding his clues in monopolies and the Coase conjecture, auction theory, and the work of Adam Smith. What are the parallels between a firm's capital and an art museum's collection? What does the market say about art's authenticity versus its availability? And what is the mysterious "death effect" that lies at the heart of the case? Spearman must rely on his savviest economic insights to clear up this artful mystery and pin down a killer. A book that provides a treatment of microeconomic theory that stresses the relevance and application to managerial and public policy decision making.

During the last decade, the Latin American and Caribbean region has experienced unprecedented natural resources abundance. This book highlights how transparency can help realize the benefits and reduce negative externalities associated with the extractive industries in the region. A central message is that high-quality and well-managed information is critical to ensure the transparent and effective governance of the sector. The insights from experiences in the region can help policymakers design and implement effective regulatory reforms and adopt international standards that contribute to this goal. This is particularly important at a time when the recent boom experienced by extractives in the region may be coming to an end.
