The subject of 'Intrinsically Conducting Polymers: an Emerging Technology' was addressed at the NATO Advanced Research Workshop held in Burlington, Vermont, U.S.A. in October 1992. Approximately 30 invited scientists from 11 different countries attended the workshop and 24 lectures were given discussing in detail the most important processing techniques and applications of conducting polymers, along with the basic materials science aspects. The results was the present book, which, for the first time, addresses progress in materials science related to polymers presently on the market and to already existing applications, as well as to future applications. This book covers mostly existing and future applications of intrinsically conducting polymers. Among these applications are the redox-type, such as batteries and electrochemical actuators and artificial muscles. Capacitors, microlithography and transistor uses are addressed. The use of conducting polymers as 'smart' materials in sensor/indicator types of applications is discussed. ESD applications and EMI shielding are subjects that conducting polymers are sought after for. Microwave properties for radar/microwave absorption and for plastics joining/welding are discussed. Also, this book discusses materials processing for the various applications, including fabrication of fibers, textiles, colloids and films/coatings. This book will be an important addition to the libraries of every institution involved in this emerging technology.

This comprehensive introduction to classical electromagnetic theory covers the major aspects, including scalar fields, vectors, laws of Ohm, Joule, Coulomb, Faraday, Maxwell's equation, and more. With numerous diagrams and illustrations.

Why do some people achieve great personal success, yet never succeed in building a business or making an impact in their organization? John C. Maxwell knows the answer. "The greatest leadership principle that I have ever learned in over twenty-five years of leadership," says Maxwell, "is that those closest to the leader will determine the success level of that leader." It's not enough for a leader to have vision, energy, drive, and conviction. If you want to see your dream come to fruition, you must learn how to develop the leaders around you. Whether you're the leader of a non-profit organization, small business, or Fortune 500 company, Developing the Leaders Around You can help you to take others to the limits of their potential and your organization to a whole new level.
