Owning such a home offers total privacy and a therapeutic experience that can't be found elsewhere. Regardless of whether it is the primary or secondary residence, it offers the perfect getaway during weekends and holidays. A simple and comfortable wooden house is what you need in order to have a feeling of serenity and privacy. If you want to bond with your spouse, children or friends, there is no better way to do it than spend sometime with them around a simple wooden house in a secluded environment. On top of bonding with family and friends, a wooden house provides the perfect resting place after a successful hunting trip. Wooden houses can be built anywhere on earth regardless of the natural phenomena experienced there. For instance, you can build the house in areas prone to earthquakes and rest assured that nobody will be severely injured or die in case of an earthquake. Even if the house is brought to the ground by an earthquake, there is minimal probability of anybody being injured with wooden walls and roof. Repairing wooden houses is also quite cheap when compared to repair of houses built with concrete, blocks, bricks or any other construction material. This means that you'll end up saving money by simply deciding to build a wooden house. It is also quite easy to alter the design of a wooden house than houses built using other materials. If you want special features in a home, all you need to do is make sure that you own a wooden house and then install all the features you want. With the book "How to Build a Simple Wooden House," you'll have everything required to construct a wooden house anywhere in the world. The book contains step by step guidelines on how you can build such a house from scratch. Start your journey to owning your dream home by reading the book: How to Build a Simple Wooden House!!!

Fresh perspectives on how good design can create stylish yet ecologically sound living spaces in small-scale homes. Anyone who has faced the challenges of limited living space will find inspiration in this survey of the latest trends in environmentally sensitive, small-scale residential designs. More than fifty residential spaces are profiled—from woodsy houses and repurposed barns to cool apartments and urban lofts—both inside and out. Most of the projects were designed by up-and-coming architects, and each design proves that small-scale efficiency as well as beautiful, thoughtful design can overcome the apparent constraints of a small setting. Environmental impact is a growing concern, so each project was chosen because of its ecological sensitivity. Each case history describes the challenges confronting the designer and the solutions. Creating color schemes to enhance the feeling of openness, taking advantage of high ceilings to make multiple levels, and using collapsible furniture and sliding doors to maximize space are some of the design solutions that can be applied in any situation. Filled with beautiful color photographs and helpful floorplans, this book is a remarkable showcase of how good design can transform any small space into a comfortable, modern—and environmentally sensitive—home.

"I began building tiny houses back in 2009 when I built one for my mom. The house she was living in was starting to fall apart and become unlivable, so I knew I had to find her alternative housing. After researching various options I discovered the tiny house movement and realized that it was the perfect solution for her. A tiny house could be constructed to very high standards and still be affordable, plus it can be easily moved"--Author

ÊIf my present reader happens to be a Boy Scout or a scout-master who wants the scouts to build a tower for exhibition purposes, he can do so by following the directions here given, but if there is real necessity for haste in the erection of this tower, of course we cannot build one as tall as we might where we have more time. With a small tower all the joints may be quickly lashed together with strong, heavy twine, rope, or even wire; and in the wilderness it will probably be necessary to bind the joints with pliable roots, or cordage made of bark or withes; but as this is not a book on woodcraft we will suppose that the reader has secured the proper material for fastening the joints of the frame of this signal-tower and he must now shoulder his axe and go to the woods in order to secure the necessary timber. First let him cut eight straight polesÑthat is, as straight as he can find them. These poles should be about four and one half inches in diameter at their base and sixteen and one half feet long. After all the branches are trimmed off the poles, cut four more sticks each nine feet long and two and a half or three inches in diameter at the base; when these are trimmed into shape one will need twenty six or seven more stout sticks each four and one half feet long for braces and for flooring for the platform.
