This volume of Annals of Information Systems will acknowledge the twentieth anniversary of the founding of the International Society for Decision Support Systems (ISDSS) by documenting some of the current best practices in teaching and research and envisioning the next twenty years in the decision support systems field. The volume is intended to complement existing DSS literature by offering an outlet for thoughts and research particularly suited to the theme of describing the next twenty years in the area of decision support. Several subthemes are planned for the volume. One subtheme draws on the assessments of internationally known DSS researchers to evaluate where the field has been and what has been accomplished. A second subtheme of the volume will be describing the current best practices of DSS research and

teaching efforts. A third subtheme will be an assessment by top DSS scholars on where the DSS discipline needs to focus in the future. The tone of this volume is one of enthusiasm for the potential contributions to come in the area of DSS; contributions that must incorporate an understanding of what has been accomplished in the past, build on the best practices of today, and be integrated into future decision making practices.

Examines and refutes the idea of differential handling of minority youth offenders. How to generate information from data and convert it to useful knowledge as the basis for successful marketing decision making.

"Processes of expert decision making were examined in this study in the context of the air transport flight deck, an environment demanding informed and expedient judgments in a small-group setting. It was hypothesized that the decision making strategies that would be utilized by these experts, as reflected by patterns of information search and transfer, would be intuitive and recognitional, rather than analytical, and would be characterized by extensive and continual situation assessment, and serial, if any, evaluation of alternatives; and that the personality of the crew leader (Captain) would have an effect on information transfer and decision making during critical flight periods."--Page 1.

This book is intended as a supplement for courses in Management Information Systems (MIS). It uses cases to explain MIS concepts. It illustrates how computer-based information systems can be used to support an organization's objectives and strategic plans. The book's objective is to capture the material from a wide range of sectors such as health care, developmental activities, bank operations, microfinance, etc. and organize it around a framework that would be useful for students to understand how MIS can help in overcoming corporate challenges. It prepares students as managers, providing a clear focus on information, rather than data, and its use in business. These cases can also be used by practitioners as examples for designing MIS in their own organizations. For each case, the costs and benefits of the information system have been evaluated by calculating the Return on Investment (ROI). What is more, not only quantitative benefits, but also qualitative benefits (social and public benefits) have been identified to justify the need for technology-enabled MIS for supporting corporate strategies and operations. The book would be useful to students of MBA, BE (ICT), MCA and M.Sc. (Computer Science) courses. Besides, it would be of benefit to senior executives participating in Management Development Programmes. This book provides a unique perspective on addressing issues of various forms of violence against children from scholars within their own country. Bringing together cross-disciplinary expertise, this volume addresses a vast range of topics related to child abuse and neglect in Uganda. Exploring areas from the protection of street children to cultural proverbs related to child maltreatment, this volume examines issues both specific to the Ugandan contexts as well as broadly experienced in child maltreatment work in non-Euro-American countries. This book surveys the breadth of the child protection field, covering issues of children's universal rights, challenges of protection and ethical quandaries in researching and addressing maltreatment.

Tutorials on Spreadsheet Development, Database Development, and Web Page Development. Basic-Level, Intermediate-Level, and Advanced-Level Spreadsheet Cases. Basic-Level, Intermediate-Level, and Advanced-Level Database Cases. Web-Page Cases. For managers in all functional areas of a firm.

Townsend illustrates how attempts by occupational therapists to enable empowerment in everyday practice are thwarted by the institutional processes of admission, accountability, decision making, budgeting, risk management, and discharge.

An introduction to the use of probability models for analyzing risk and economic decisions, using spreadsheets to represent and simulate uncertainty. This textbook offers an introduction to the use of probability models for analyzing risks and economic decisions. It takes a learn-by-doing approach, teaching the student to use spreadsheets to represent and simulate uncertainty and to analyze the effect of such uncertainty on an economic decision. Students in applied business and economics can more easily grasp difficult analytical methods with Excel spreadsheets. The book covers the basic ideas of probability, how to simulate random variables, and how to compute conditional probabilities via Monte Carlo simulation. The first four chapters use a large collection of probability distributions to simulate a range of problems involving worker efficiency, market entry, oil exploration, repeated investment, and subjective belief elicitation. The book then covers correlation and multivariate normal random variables; conditional expectation; optimization of decision variables, with discussions of the strategic value of information, decision trees, game theory, and adverse selection; risk sharing and finance; dynamic models of growth; dynamic models of arrivals; and model risk. New material in this second edition includes two new chapters on additional dynamic models and model risk; new sections in every chapter; many new end-of-chapter exercises; and coverage of such topics as simulation model workflow, models of probabilistic electoral forecasting, and real options. The book comes equipped with Simtools, an open-source, free software used throughout the book, which allows students to conduct Monte Carlo simulations seamlessly in Excel.

In bringing together this book, the editors have kept two goals in mind. Firstly, the goal of educating the reader by giving an insight into the wealth of computing and mathematical techniques now being used to build decision support systems. Secondly, of aiming to stimulate the imagination by including an eclectic mix of contributions from a wide range of business areas to demonstrate that there is no field in which modern decision support techniques cannot usefully be applied. The quintessence of decision support systems is that they are designed to

assist people in establishing the best course of action in a given situation but not to automate or tell them prescriptively how to achieve a goal.

Through handpicked cases from a variety of areas and business houses, this book illustrates how strategic management can be used to achieve better operational performance and strengthen their services by aligning business goals with performance measures.

EVERYONE'S GUIDE - FORECAST & SOLUTION introduces new, easy-to-use statistical methods so that the reader can answer the questions: How long will nuclear peace tend to continue? And, what can be done to extend it further? Dietrich Fischer, a past MacArthur Fellow at Princeton, was emphatic: "This is an original & highly readable contribution to the most important issue facing humanity today - surviving the nuclear threat. Jeanes combines lucid common sense with mathematical rigor in this landmark work. Anyone with an interest in having a future should read this work." Similarly, another distinguished scholar & author in the field declared, "It was more than interesting: it was completely fascinating." The general literate reader can assess when a nuclear use (small or otherwise) would tend to occur at probabilities from 1% to 99.9%, & what precisely can be done to forestall such use. Jeanes debunks deterrence theory, illustrates consequences of proliferation, & provides a unified explanation for warfare, conventional & nuclear. A comprehensive work - ethical, political, historical, analytical. 100+ Graphs & Tables, 1,500+ footnotes. TOLL-FREE, 24 hours-a-day, credit card line (800) 448-3330; Publisher: (800) 446-0467.

Decisionmaking literature, which has emphasized the act of solving problems, has long neglected examining the identification of the problems themselves. This book argues that in solving problems, executives should abandon the attempt to predetermine objectives over time and adopt a "Problem Exchange Ratio" concept. This model assesses the severity of problems before and after executives employ solutions. New problems that may result from possible solutions can then be discovered and ameliorated. Combining theory and practical aspects of executive decisionmaking in both the public and private sectors, this book gives the reader a fuller understanding of the link between decisions and problems.
