Modern Construction Management Prof. Frank Harris, Prof. Ronald McCaffer, 2013-02-28 This new edition of a core undergraduate textbook for construction managers reflects current best practice, topical industry preoccupations and latest developments in courses and fundamental subjects for students. While the construction process still requires traditional skills, changes over recent decades today demand improved understanding of modern business, production and contractual practices. The authors have responded accordingly and the book has undergone a thorough re-write, eliminating some of the older material and adding new processes now considered essential to achieving lean construction. Particular emphasis is given, for example, to supply chains and networks, value and risk management, BIM, ICT, project arrangements, corporate social responsibility, training, health and welfare and environmental sustainability. Modern Construction Management presents construction as a socially responsible, innovative, carbon-reducing, manager-involved, people-orientated, crisis-free industry that is efficient and cost effective. The overall themes for the Seventh Edition are: Drivers for efficiency: lean construction underpinning production management and off-site production methods. Sustainability: reflecting the transition to a low carbon economy. Corporate Social Responsibility: embracing health & safety, modernistic contracts, effective procurement, and employment issues. Building Information Management: directed towards the improvement of construction management systems. The comprehensive selection of worked examples, based on real and practical situations in construction management and methods will help to consolidate learning. The management of construction projects is a wide ranging and challenging discipline in an increasingly international industry, facing continual challenges and demands for improvements in safety, in quality and cost control, and in the avoidance of contractual disputes. Construction Management grew out of a Leonardo da Vinci project to develop a series of Common Learning Outcomes for European Managers in Construction. Financed by the European Union, the project aimed to develop a library of basic materials for developing construction management skills for use in a pan-European context. Focused exclusively on the management of the construction phase of a building project from the contractor's point of view, Construction Management covers the complete range of topics of which mastery is required by the construction management professional for the effective delivery of new construction projects. With the continued internationalisation of the construction industry, Construction Management will be required reading for undergraduate and postgraduate students across Europe.

Construction Project Management Frederick E. Gould,Nancy Eleanor Joyce,2011 Construction Project Management, Third Edition provides readers with the big picture of the construction management process, giving a perspective as to how the construction industry functions in relation to the national economy and in the public's eye. This book focuses on the collaborative effort required to complete any public or private construction project, providing the construction professional with the skills needed to work with and alongside the owner representative, the designer, and within the public's eye. It explains in detail the project elements and environment, and the responsibilities of the varied project professionals, and follows in detail the chronology of a project.

Manual of Construction Project Management Jüri Sutt,2011-05-09 This construction client's manual is written in the form of a list of activities. It supports owners in the role of client by helping them make choices during the project development process. This increases control over cost, quality and duration at each stage. Activities within each main stage of the project development (preparation stage; procurement; design; preparation for construction; construction itself; handover; implementation) are divided into phases, each requiring separate decision-making. The phase begins with a list of direct

previous decisions and continues with a list of executors, the goal of the present phase and a list of activities to be performed. And each phase ends with a list of expected results and a list of activities that these results release for action in the next phase. The sequence of these seven stages can be altered to help building owners manage risk by choosing and combining the timing of these stages. The tasks involved in project preparation, described in the first chapter are for example, often left by the owner for the designers to solve - or sometimes even the contractors. The decisions relating to the choice of procurement schemes, described in the second chapter, can be made either at the preparation stage of project development, as part of the prioritisation of aims, or at the time of choosing the designer, or at the stage of choosing construction contractors. Manual of Construction Project Management - for owners & clients is for prospective owners who either operate as clients themselves, or who use the services of professional construction management companies. The aim is to help both owners and their construction partners understand what to expect from each other. The manual describes activities at the level of detail required to choose the management task or method to make the decision. It is not bound to regulations of any specific country and a detailed glossary makes it an indispensable worldwide reference.

Construction Management Strategies Milan Radosavljevic,John Bennett,2012-05-08 An authoritative textbook on

construction management offering a clear model for understanding theoretical aspects. The construction industry has become a truly global network of interconnected stakeholders making demands which require the involvement of skilled workforces from all over the world. Construction Management Strategies sets the foundations for understanding and managing construction's inherent complexity and uniqueness. It establishes clear definitions of commonly accepted terms like built environment, construction, civil engineering, etc. which are often given confusing and conflicting interpretations. It cuts through the plethora of overlapping role titles currently used in the construction sector that make it difficult to establish how projects are actually managed. Construction Management Strategies: Offers a robust and consistent theoretical basis to explain the performance of the main approaches to construction management. Describes corporate and project management in construction as an integrated whole. Provides the basic toolkit a student needs to think through the practical situations they will later face. Helps bring the theory of construction management to international students who struggle to find a solid grounding in this complex and fragmented subject. Includes a companion website featuring a wealth of directly transferable examples for students, as well as PPT slides and topic discussion ideas for lecturers.

Construction Stakeholder Management Ezekiel Chinyio, Paul Olomolaiye, 2009-10-22 This book captures best practice in construction stakeholder management using a range of international case studies. It demonstrates stakeholder mapping, presents the power/interest matrix and analyses a model for the timely engagement of stakeholders. The increased use of partnering and other relational forms of contracting have underlined the need for project participants to work together and also to be aware of all those who can affect or be affected by a project and its associated developments. Stakeholder management enables them to see this wider picture and provides guidance for managing the diverse views and interests that can manifest in the course of a project's life. All construction projects have the potential for conflicts of interest that can result in costly and damaging legal proceedings. This new book advocates an alternative to dispute resolution that is proactive, practical and global in its application. *Construction Stakeholder Management* is therefore an essential text for advanced students, lecturers, researchers and practitioners in the built environment.
