PRINCIPLES OF ECONOMICS, 3e, is designed with one overriding aim: to make this exciting and highly relevant subject clear, accessible and easy to understand. The text puts economics in the context of the real world, bringing the subject alive and giving students an insight into the economy in which we live and the economic forces that shape our lives. The distinguishing features of the book are its clarity and conciseness. These make it ideally suited to introductory courses in economics which are now largely dominated by business studies students and other non-economics majors.

This book by Lionel Robbins first appeared in 1932 as an outstanding English-language statement of the Misesian view of economic method, namely that economics is a social science and must advance its propositions by means of deductive reasoning and not through the methods used in the natural sciences. The case is argued here with patience and attention to scholarly details. The unfortunate second edition of this book, which is more available today, introduces confusions by departing from Austrian microeconomic theory. Thus does the Mises Institute celebrate the 75th anniversary of the first edition with this reprint. "Reading Robbins," writes Samuel Bostaph of the University of Dallas, "is an excellent way of contrasting his explanation of the basic nature of economics with that of the Austrian School, as found in the work of Mises as an extension of Carl Mengers's foundations. Such a reading wonderfully clarifies one's understanding of the basic conception of economics as a science of human action, rather than one of mere 'economizing.' "

This book contains a complete course in economics...such a thorough exposition...is ideal for A-level and Higher level courses, professional examinations and first year degree students. Building on the strengths of the previous editions the Fourth Edition has been thoroughly revised and updated taking account of the changes which have occurred in the teaching of economics, and in the economics market. The new edition takes a balanced, pluralistic approach, developing arguments and following them through, encouraging students to explore different schools of thought. Key Features: ? The works of six contemporary women writers — Doris Lessing, Anita Desai, Mahasweta Devi, Buchi Emecheta, Margaret Atwood and Toni Morrison — are discussed as potential ways of testing and expanding the theoretical debate. A brief history of subjectivity and subject formation is reviewed in the light of the works of thinkers such as Hobbes, Hume, Kant, Hegel, Marx, Nietzsche, Raymond Williams and Stephen Greenblatt, and the work of leading feminists is also seen contributing to the debate substantially.
