Future mobile access networks will require upgraded telecommunications networks; 3G LTE/ SAE is the next step, allowing data rates above 100 Mbps. Telecommunications engineers will need to understand the new SAE/ EPC architecture and its tendency towards automatic configuration, but the complexity, length and dryness of the standards documents make it difficult for them to find the information they need and work out how to apply it to their daily product and network development. This book - a new edition of SAE and the Evolved Packet Core - provides clear, concise and comprehensive coverage of the entire SAE/ EPC architecture, explaining concepts and standards and how they are used in commercial service settings. More than just a précis of the standards, it gives real insight into their development and the real-world scenarios in which they have been used since the publication of the first edition. This second edition places more emphasis on key aspects such as mobile systems and protocols (Diameter, GTP, S1-AP), and includes new coverage of femtocells, SIPTO, LIPA, LTE relay and LTE Advanced. Up-to-date coverage of SAE including the latest standards development Easily accessible overview of the architecture and concepts defined by SAE Thorough description of the Evolved Packet Core for LTE, fixed and other wireless accesses Comprehensive explanation of SAE key concepts, security and Quality-of-Service Covers potential service and operator scenarios including interworking with existing 3GPP and 3GPP2 systems Detailed walkthrough of network entities, protocols and procedures Written by established experts in the SAE standardization process, all of whom have extensive experience and understanding of its goals, history and vision

The world is full of problems and conflicts. So why can we not solve them? According to Edward de Bono, world thinking cannot solve world problems because world thinking is itself the problem. And this is getting worse: we are so accustomed to readily available information online that we search immediately for the answers rather than thinking about them. Our minds function like trying to drive a car using only one wheel. There's nothing wrong with that one wheel - conventional thinking - but we could all get a lot further if we used all four... De Bono examines why we think the way we do from a historical perspective and uses some of his famous thinking techniques, such as lateral thinking, combined with new ideas to show us how to change the way we think. If we strengthen our ability and raise our thinking level, other areas of our life - both personal and business success - will improve. De Bono is the master of the original big 'concept' book and his enticement to us to use our minds as constructively as possible should appeal to a whole new generation of fans.

Presenting a comprehensive overview of the design automation algorithms, tools, and methodologies used to design integrated circuits, the *Electronic Design Automation for Integrated Circuits Handbook* is available in two volumes. Chapters contributed by leading experts authoritatively discuss processor modeling and design tools, using

performance metrics to select microprocessor cores for IC designs, design and verification languages, digital simulation, hardware acceleration and emulation, and much more. Save on the complete set.

Posing continues to be a critical factor for photographers: doing it well is one of the primary ways true professionals can help their work stand out. In *Master Posing Guide for Portrait Photographers*, the author covers all the types of poses and subjects a professional photographer is likely to encounter in this handy guide. Headshots, waist-up, three-quarter and full-length poses (both seated and standing) are covered in detail. Also covers working with special subjects, such as brides and children.

Shipboard maintenance is still an area of weakness for many companies, with repair costs featuring heavily on budgets. There is no point in creating an expensive, computer-based maintenance system if onboard equipment/machinery is poorly maintained. Ships staff must always observe manufacturers' instructions for maintenance. The *Ship Repair and Maintenance Handbook* looks at the practical side of repair and maintenance, rather than reliance on computer-based instruction, to assist onboard and shore-based personnel in minimising problems and expensive repairs. It also emphasises the importance of investment in education, spare parts and regular inspection by superintendents.
