Fred A. Baughman Jr., MD is an adult and child neurologist who has made "disease" (brain tumor, multiple sclerosis, etc.) vs. "no disease" (emotional, psychiatric) diagnoses daily and has discovered and described real diseases. Herein he describes the difference between psychiatry/psychology, on the one hand, and neurology and all organic medicine, on the other, and why ADHD and all of psychiatry's "chemical imbalances" are not diseases at all--but fraud. Referring to psychiatry, he states: "They made a list of the most

common symptoms of emotional discomfiture of children and in a stroke that could not be more devoid of science or Hippocratic motive-termed them "diseases"/ "chemical imbalances" each needing/requiring a "chemical balancer"- a pill." In 1970, when "hyperactivity"/"minimal brain damage" (forerunners of ADHD) was first represented to Congress to be a brain disease, only 150,000 had it. Today, not by science or truth, but the "big lie" -saying it is a disease often enough, 6 million have it! Nor is ADHD the only "chemical imbalance." They give us conduct disorder (CD), oppositional-defiant disorder (ODD), major depressive disorder (MDD), OCD, PTSD, GAD, SAD, etc., a total of 374 psychiatric disorders in the Diagnostic and Statistical Manual (DSM-IV-TR) of the American Psychiatric Association (APA), said to be "chemical imbalances" needing "chemical balancers" --pills! In 2003 Congressional hearings it was said that 17% of the nation's school children, 8.8 million, were labeled and drugged by psychiatry. Today it is 20%; one in five; over 10 million! How better to sew the seeds of our own destruction? As if this were not enough, the President's New Freedom Commission on Mental Health is set to foist compulsory, government-mandated, mental health screening on all 52 million US schoolchildren. When normal people are lied to, told they have a "disease" to make "patients" of them, their right to informed consent has been abrogated and they no longer live in a democracy. When, pursuant to that lie, they are drugged, what we have is not "treatment" but poisoning. This is the greatest health care fraud in modern medical history.

This book originally appeared in German in 1974, under the title "Bergschadenkunde" (mining subsidence engineering), and then in Russian in 1978, published by Nedra of Moscow. When the German edition was almost out of print, Springer-Verlag decided to bring out a new edition, this time in English. For this English version the text has been thoroughly revised, enlarged, and supplemented by over 100 new figures. The book deals with the current state of international knowledge on strata and ground movement over mine workings, with its

damaging effects on mine shafts and the land surface, and with measures for regulating mining damage in law and reducing it in practice. Discussion begins with the mine excavation underground - the cause - and ends with the damage to surface structure- the effect. Methods of roof control, including the subject of rock bursts, are not discussed, since that is a field concerned more with the safety of underground workings than with minimizing damage at the surface. Of the 500 literature references in the German edition, only the more important for an international readership have been retained, but no value judgement on the many publications not mentioned should be read into this. The book is principally intended as a working aid for the mine surveyor, the mining engineer, the architect, and the civil engineer. For the student and the post-graduate researcher, it offers a summary and guide to this whole field of knowledge.

He's only a friend. Those words had haunted him from the moment Jessie James had heard them muttered from the girl who held his heart, and whom he thought had his back. Fourteen years later, he still feels those words like a brand on his soul. Lucky for him he has a son to focus on, a full-time job that demands his attention the rest of the day, and not a single moment to spare for a woman who won't stand up for him when he needs her the most. He's only a friend. The words had slipped out of Ellen's mouth, and before she could recall them, or better yet, explain them, Jesse is gone from her life for good, taking her heart with him. She tries to move

on, to climb her way out of the pit of despair, but not one single person - regardless of how badly she wants to make it work - can fill the void that was left in his wake. Time heals all wounds. Or at least that is how the saying goes. It's a crock of crap, though. Fourteen years pass when Jessie and Ellen see each other again without the influence of the town and bad memories surrounding them, and it's as if not a single day has passed. Ellen knows the instant that her eyes see her old love that she's still just as in love with him today as she was all those years ago. The problem is that Jesse wants nothing to do with her. Or at least that's what he keeps telling himself.

Charles Bojórquez, a resident of Mt. Washington, California, began his art career by spray-painting along riverbeds. He spent a summer at art school in Guadalajara, Mexico, and attended classes at Chouinard Art Institute (now Cal Arts) the year before graduating from high school in 1967. By the end of 1969, Bojórquez had created a symbol that represented him and the streets--a stylized skull called Señor Suerte (Mr. Luck). His work has been called "calligraffiti"--calligraphy + graffiti. "The book is structured in three parts: a few introductory texts and the interview, a section dedicated to drawings and black and white artwork, and in the last section Chaz's pictorial production."--P. 15.

Mining the Earth's Heat: Hot Dry Rock Geothermal Energy describes the work carried out by the Los Alamos National Laboratory to turn an idealistic concept - that of drawing useful amounts of energy from the vast underground store of hot rock at reachable depths - into a practical reality. This book provides comprehensive documentation of the over two decades of experiments carried out at the test site at Fenton Hill, New Mexico, where the feasibility of accessing and extracting this vast natural resource was finally demonstrated. It also discusses the numerous technical, administrative, and financial hurdles that had to be overcome along the way. This publication will no doubt prove invaluable to researchers around the world as they strive to move this now-proven technology toward commercial viability. In addition, it is a valuable source of relevant information for anyone interested in the world energy outlook for the 21st century and beyond.
