Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Robert J. Blackwell Assistant Secretary for Maritime Affairs

Intelligent information and database systems are two closely related and well-established subfields of modern computer science. They focus on the integration of artificial intelligence and classic database technologies in order to create the class of next generation information systems. The major target of this new generation of systems is to provide end-users with

intelligent behavior: simple and/or advanced learning, problem solving, uncertain and certain reasoning, self-organization, cooperation, etc. Such intelligent abilities are implemented in classic information systems to make them autonomous and user oriented, in particular when advanced problems of multimedia information and knowledge discovery, access, retrieval and manipulation are to be solved in the context of large, distributed and heterogeneous environments. It means that intelligent knowledge-based information and database systems are used to solve basic problems of large collections management, carry out knowledge discovery from large data collections, reason about information under uncertain conditions, support users in their formulation of complex queries etc. Topics discussed in this volume include but are not limited to the foundations and principles of data, information, and knowledge models, methodologies for intelligent information and database systems analysis, design, implementation, validation, maintenance and evolution.

"Once upon a time there was a little mouse house. It was like a doll's house, but not for dolls, for mice." Not proper mice, but a flannel He-Mouse and She-Mouse with beady eyes and bristle whiskers who stand quite still, propped on their hind legs in the sitting room. Mary knows real mice run and scamper, and disappointed with her new gift, she puts the mouse house away in her room. Meanwhile, down in the basement, a real mouse named Bonnie has been jostled out of her woefully inadequate flowerpot home by her older brothers and sisters. Overlooked by her harried parents and desperate for shelter, Bonnie ventures upstairs and finds the mouse house. And before too long what was a miniature make-believe house becomes a marvelously messy home for proper mice who know how to play, much to everyone's delight.

Through this collection of poems I am attempting to tell a story of life. This story is about my deep seated faith, and the reverence I have for God and his marvelous creation. In this book I am trying to underscore the virtues of redemption, hope, love, growth, truth and friendship. In my genuine effort to capture the humanity of my story, I felt compelled to address the fallibility of man so, sensitive issues like rejection, helplessness, brokenness, lying, hate and injustice had to be highlighted. This book seeks to remind us that, even with all the negativity, and the challenges of humanity, we can still see and feel the emblematic touch of God all around us. There are victories in the waiting so, we cannot lose hope. Hope safeguards one's life against despair and centers it on the endless possibilities of God. My life is a story well worth the living, because I have been blessed beyond measure. I was born in Jamaica, but I have spent the greater part of my living in southern Florida. I have been married to the same wonderful woman for thirty three years. Our lives have been sweetly enriched by our two lovely daughters and one exceptionally adorable grand daughter. I really enjoy putting my thoughts on paper, either in poems or songs. I am so inspired by the natural beauty I see all around me. I also carry a heavy burden for those who are victims of hate and injustice, advocating on their behalf will probably be the endeavor that guides my writing career.

Chip Block, the hero of Parts, is back, and still worried about falling apart based on the

things he hears. This time he's made a list of all the strange, crazy things he's heard people say: "I lost my head." "My nose is running." "I sang my heart out. . . ." It's scary stuff, but he has a plan for making sure he doesn't accidentally leave any of his parts behind. A hilarious sequel to the wildly popular Parts and More Parts.

This report describes the Act and states the reasons for our conclusion that the Act should be repealed. It also contains the text of the Act, describes the survey conducted of members of the legal profession regarding their views on the Act, and summarizes the most frequently expressed reasons for retaining the Act, and states why it was concluded that those reasons were overborne by those in favour of repeal. Finally, it describes some approaches that could be taken to reforming rather than repealing the Act.

Provides an account of how, shortly before World War II, a heroic Naval officer named Swede Momsen led the efforts to save thirty-three men trapped in a sunken submarine. While it is still a mystery of how a low-energy-density sound wave can concentrate enough energy in a small enough volume to cause the emission of light, research in acoustic cavitation and sonoluminescence has led to plausible theories in which the source of light can be experimentally sustained. It has also led to promising applications, such a

"Staff from smaller airports typically lack specialized expertise in the negotiation and development of airport property or the resources to hire consultants. ACRP Research Report 213 provides airport management, policymakers, and staff a resource for developing and leasing airport land and improvements, methodologies for determining market value and appropriate rents, and best practices for negotiating and re-evaluating current lease agreements. There are many factors that can go into the analysis, and this report reviews best practices in property development."--Foreword.
